

DAYLIGHT

and its spectrum

SECOND EDITION

S. T. HENDERSON

M.A., Ph.D. (Cantab.), B.Sc. (Lond.)

Adam Hilger Ltd
Bristol

CONTENTS

1	THE RISE OF SPECTROSCOPY	1
	Ancient and mediaeval ideas. Progress from Galileo to Newton. The spectrum observed. Wollaston, Fraunhofer and their successors. Spectroscopy becomes useful. Aids to spectroscopy.	
2	THE SUN	15
	The sun's physical characteristics. The photosphere. The chromosphere. The corona. The sun's temperature and emission spectrum.	
3	THE EARTH'S ATMOSPHERE	25
	The upper atmosphere. Ozone in the atmosphere. Below the ozone layer. The limit of atmospheric transmission. Absorption of infra-red radiation in the atmosphere. Infra-red emission in the atmosphere.	
4	SCATTERING OF LIGHT IN THE ATMOSPHERE	38
	Rayleigh scattering. Non-Rayleigh scattering. Ångström's theory. Other scattering formulae. Polarization of scattered light.	
5	THE SOLAR CONSTANT	50
	Determinations at high altitudes. The sun as a variable star.	
6	THE LITERATURE ON DAYLIGHT	60
7	EXPERIMENTAL WORK, 1879 TO 1921	66
8	THE DAYLIGHT SPECTRUM, 1922 TO 1949	83
	The ultra-violet spectrum of sun and sky. The visible spectrum, with or without ultra-violet. Calculations of daylight spectra.	
9	THE DAYLIGHT SPECTRUM, 1950 TO 1959	104
	Projects under the NBS. The Mount Lemmon project. Measurements in Europe and New Zealand. Colorimetry of the sky. Calculations of daylight distributions and chromaticities. More standard distributions.	
10	SPECTROPHOTOMETRY OF DAYLIGHT FROM 1960	126
	Ultra-violet measurements at Davos. Other work on the ultra-violet spectrum. Extensive sampling of the daylight spectrum. Measurements at unusual sites.	
11	HIGH ALTITUDE SPECTRAL MEASUREMENTS	171
	Solar irradiance. The NASA project. Radiant exitance of the sun.	
12	COLORIMETRIC AND OTHER MEASUREMENTS ON DAYLIGHT FROM 1960	185
	Standard spectral power distributions. Standard distributions of sky luminance and ground illuminance.	

13	THE PROCESSING OF DAYLIGHT SPECTRA	196
	Characteristic vector analysis. Application to a selected CCT, RD and other standardized distributions. The daylight chromaticity locus. Further use of the characteristic vector method. Chromaticities from spectral distributions.	
14	THE DAYLIGHT SPECTRUM: ACHIEVEMENTS AND POSSIBILITIES	213
	Standardized data on daylight. The ultra-violet end of the spectrum. The infra-red end of the spectrum. Considerations on spectral measurement. Reference sources. The visible spectrum. Other possible standardizing measurements.	
15	LESS COMMON FORMS OF DAYLIGHT	225
	Eclipses. The moon. The zodiacal light and other sunlight effects. The atmosphere. Daylight under water. The colour of the sky. The rainbow. The zenith sky at twilight.	
16	WHITENESS	244
	White light: experimental evidence. Applications of white light. White light for illumination. White surfaces. Non-fluorescent materials. Fluorescent white materials. Whiteness scales. Attributes of whiteness.	
17	USES OF DAYLIGHT	258
	Human vision. Light and plants. Light and animals. Light in buildings. Sunlight. Photochemical action of light. Colour matching. Colour rendering and metamerism.	
18	ARTIFICIAL DAYLIGHT SOURCES	271
	Artificial light. Early attempts at artificial daylight. Carbon arc lamps. The tungsten filament lamp. CIE Standards. Other incandescent lamps with filters. Discharge lamps: fluorescent tubes. Fluorescent tube and lamp combinations. Improvements in the fluorescent tube. D ₆₅ . D ₅₀ . The xenon arc. Photographic light sources. Other discharge tube light sources. Assessment of artificial daylight sources. Viewing conditions.	
19	ARTIFICIAL DAYLIGHT: TRYING TO IMPROVE ON NATURE	302
	Plant culture. Ultra-violet for animals. The MRC investigation. The detection of hypoxaemia. Testing by light. Conservation.	
	APPENDIX 1: UNITS AND DEFINITIONS	309
	APPENDIX 2: CHRONOLOGICAL INDEX OF SOME CONTRIBUTORS TO THE STUDY OF DAYLIGHT	319
