

The background of the cover is a detailed 3D molecular model of a DNA double helix. The sugar-phosphate backbones are shown in orange and red, while the nitrogenous base pairs are represented by dark green spheres. A prominent feature is a large, textured red sphere in the lower center, which appears to be a seed or a specific protein complex. A bright blue vertical beam of light passes through the center of the DNA structure, intersecting the red sphere. The overall color palette is vibrant, with a mix of reds, oranges, blues, and greens.
