

OXFORD

Materials Science for **Electrical** and **Electronic Engineers**

Ian P. Jones

Contents

Part I Introduction

1 Conductors, insulators and semiconductors	3
1.1 Introduction	3
1.2 The structure of the atom	4
1.3 The electronic structure of atoms	6
1.4 Chemical bonding in solids	14
Strong chemical bonds	15
1.5 The ionic bond	15
1.6 The covalent bond	20
1.7 The metallic bond	24
1.8 Strong bonds: summary	27
1.9 Other bonds (weak bonds)	27
The hydrogen bond	27
Van der Waals bonding	28
1.10 Conductors, insulators and semiconductors	29
1.11 Summary	34
Recommended reading	35
Questions	35

Part II Electrical conductors

2 An introduction to metals	41
2.1 What is a metal?	41
2.2 How metals are constructed: microstructure and crystals	43
Stage 1	44
Stage 2	44
Stage 3	45
2.3 What are metal crystals like?	46
2.4 Defects in crystals	53
Stage 4	53
2.5 Stage 5: Point defects	57
2.6 Metal properties revisited	58
2.7 The conduction of electricity through metals	61
2.8 Which conductors are used in electrical engineering?	63

2.9	Summary	65
	Recommended reading	66
	Questions	66
3	Mechanical properties	67
3.1	Why should an electrical engineer know about <i>mechanical</i> properties?	67
3.2	Mechanical properties	68
3.3	What are stress and strain?	69
3.4	Temporary and permanent strain (elastic and plastic)	71
	Mechanical properties and how they are measured	77
3.5	Strength and ductility: the tensile test	77
	Notes on the tensile test	79
3.6	Why do cracks form? Fracture toughness	81
	Measuring fracture toughness	84
	Real engineering materials	84
3.7	Cheap and cheerful mechanical tests	88
	The hardness test	88
	The impact test	90
3.8	Fatigue and fatigue tests	90
3.9	Creep and creep tests	94
3.10	Summary	97
	Recommended reading	98
	Questions	98
4	Manufacturing conductors	101
4.1	Producing elemental copper	101
	Shaping copper	104
4.2	Making large cross-section conductors	104
4.3	Small cross-section conductors: wires	104
4.4	Flat conductors: rolling	107
4.5	Joining conductors: soldering	109
	Making a good joint: fluxes	114
	The mechanical properties of soldered joints	116
	Soldering machines	118
4.6	The limitations of pure elements: strong conductors	118
	How are metals strengthened?	120
4.7	Summary	133
	Recommended reading	134
	Questions	134

5 Steel	136
5.1 Introduction	136
Cost	137
Wide range of mechanical properties	138
5.2 The structure of steel: plain carbon steels	139
Plain carbon steels	139
Mechanical properties of plain carbon steels	145
5.3 Heat treated, or alloy, steels	147
5.4 Stainless steels	150
5.5 The welding of steels	153
5.6 Summary	156
Recommended reading	157
Questions	157
6 Electrochemistry: electroplating and corrosion	159
6.1 Chemistry: some reassuring comments!	159
6.2 The concept of an electrochemical cell	160
6.3 Electroplating	163
A simple electroplating cell	163
6.4 Corrosion	172
Prevention of corrosion	174
6.5 Useful corrosion: batteries	174
6.6 Fuel cells	181
6.7 Accumulators (secondary batteries)	182
6.8 Summary	184
Recommended reading	185
Questions	185

Part III Electrical insulators

7 Ceramics	189
7.1 What is a ceramic?	189
7.2 Bonding and microstructure	192
7.3 DC properties	197
Conduction by electrons: electronic conduction	200
Conduction by ions: ionic conduction	201
Electrical breakdown	202
7.4 AC properties	202
7.5 Mechanical properties	207

7.6	Making ceramic artefacts	209
1.	Glass artefacts	210
2.	Non-preponderantly glass artefacts	211
7.7	Examples of ceramic artefacts in electrical and electronic engineering	215
	Ceramics as conductors	215
	Ceramics as insulators	215
	Ceramics as capacitors	217
7.8	Summary	217
	Recommended reading	218
	Questions	218
8	Plastics	220
8.1	Introduction: plastics and ceramics as electrical insulators	220
8.2	What is a plastic?	221
	Thermoplastics	222
	Rubbers	227
	Thermosets	227
8.3	DC electrical properties	228
8.4	AC electrical properties	231
8.5	Mechanical properties	233
8.6	Processing plastics	237
8.7	Summary	237
	Recommended reading	239
	Questions	239

Part IV Semiconductors and other materials

9	Semiconductors and the electronics industry	243
9.1	Introduction	243
9.2	The four basic interfaces	244
9.3	Fabrication	245
	Producing a silicon wafer	245
	Lithography and deposition	250
	Packaging	254
9.4	Problems	257
9.5	Summary	257
	Recommended reading	258
	Questions	258

10 Magnetic materials	259
10.1 Introduction	259
10.2 Magnetic parameters	260
10.3 The three types of magnetic material	262
10.4 Measuring magnetic properties	264
10.5 Applications of soft magnetic materials	270
1. Electromagnets and relays	270
2. AC transformers	271
3. Generators and motors	276
10.6 Magnetic recording media	276
10.7 Hard (permanent) magnets	278
Steels	278
Alnicos	278
Ferrites	280
Samarium-cobalt alloys	280
Neodymium-iron-boron	281
10.8 Summary	282
Recommended reading	283
Questions	283
11 Superconductors and optical fibres	285
11.1 Superconductors	285
11.2 How does superconductivity work?	286
11.3 Engineering applications of superconductors	287
11.4 Optical fibres	289
11.5 Summary	294
Recommended reading	294
Questions	295
Answers to questions	296
Index	333
