

Official Methods
for the
Determination
of *Trans* Fat

2nd Edition

Magdi M. Mossoba
John K.G. Kramer

Contents

Preface	vii
About the Authors	viii
Introduction.....	1
Structure and Occurrence of <i>Trans</i> Fatty Acids	1
Industrially produced <i>trans</i> fatty acids	3
<i>Trans</i> fatty acids derived from ruminants	5
<i>Trans</i> fatty acids in humans.....	7
Capillary Gas Chromatography.....	8
Selection of fatty acid derivative	9
Selection of a catalyst for derivatization of lipids	9
Selection of GC column and column length	16
Limitation of 100 m GC columns.....	19
Differences between 100 m cyanopropyl polysiloxane GC columns	26
Effect of carrier gas.....	28
Effect of sample load.....	28
Complementary silver-ion separations of geometric isomers	28
Resolution of <i>trans</i> isomers other than 18:1	29
Separation of CLA isomers using GC and the complementary Ag-HPLC techniques	30
GC standards for FAME identification	36
Quantitation of fatty acid methyl esters by GC	36
Experience.....	37
Official Methods	38
Hydrolysis/saponification and methylation of plant derived fats and oils	38
Hydrolysis/saponification and methylation of dairy and rumen derived fats....	39
GC column selections	45
The choice of internal standard	46
The selection of GC temperature program.....	47
Other GC parameters	50
Calculations.....	51
Fourier-Transform Infrared Spectroscopy	51
Instrumentation.....	51
Transmission mode.....	53
Attenuated total reflection mode	53
<i>Trans</i> fat infrared methodology	54
Transmission FTIR Official Method AOCS Cd 14-95/AOAC 965.34	55
ATR-FTIR Official Method AOCS Cd 14d-99/AOAC 2000.10	55
ATR-FTIR negative second derivative methodology	58
Present Status and Limitations of Official Methods	61
References.....	63
