<i>Preface</i>	<i>xxi</i>
Part I The design of smart clothing and wearable technology	1
1 The emergence of wearable computing M. MALMIVAARA, Tampere University of Technology, Finland	3
1.1 The first devices	3
1.2 The first wearable computers	7
1.3 Wearable electronics	10
1.4 Intelligent clothing	13
1.5 Conclusion: 'Where can I buy this?'	22
1.6 References	23
2 Types of smart clothes and wearable technology R. D. HURFORD, University of Wales Newport, UK	25
2.1 Introduction	25
2.2 A brief history	26
2.3 Industry sectors' overview	39
2.4 Current trends	41
2.5 Market forecast	42
2.6 Conclusions	42
2.7 References	43
3 End-user based design of innovative smart clothing J. McCANN, University of Wales Newport, UK	45
3.1 Introduction	45
3.2 The garment layering system	46

3.3	Identification of design requirements	47
3.4	The technology layer: the impact of emerging smart technologies on the design process	54
3.5	Conclusion: a new hybrid design process	63
3.6	Future trends: commercial realities	65
3.7	References	66
4	The garment design process for smart clothing: from fibre selection through to product launch J. McCANN, University of Wales Newport, UK	70
4.1	Introduction	70
4.2	The design brief	74
4.3	2-D design development	77
4.4	Textile development	79
4.5	Initial 3-D design development	81
4.6	Modern construction and joining technology	83
4.7	Integration of wearable technology	84
4.8	Final prototype development	86
4.9	Point of sale	89
4.10	End-of-life cycle	89
4.11	Future trends	90
4.12	References	94
5	Designing smart clothing for the body D. BRYSON, University of Derby, UK	95
5.1	Introduction	95
5.2	Anatomical, physiological and psychological considerations	96
5.3	How smart is smart?	101
5.4	Human-garment interaction	103
5.5	Demands of the body and wearable technology	104
5.6	References	106
Part II	Materials and technologies for smart clothing	109
6	The influence of knitwear on smart wearables F. SAIFEE, University of Wales Newport, UK	111
6.1	Introduction	111
6.2	Technical background of knitwear	112
6.3	Three-dimensional fabrics	115
6.4	Body scanning and texture mapping	118

6.5	Application of knitwear trends to the smart wearable industry	120
6.6	Relevance of knitwear to smart wearables, lifestyle trends and brand innovation	127
6.7	Future trends	128
6.8	Conclusion	129
6.9	Other areas of interest	129
6.10	Bibliography	130
7	Woven structures and their impact on the function and performance of smart clothing L. THOMAS, Woven Textiles Consultant, UK	 131
7.1	Introduction	131
7.2	Analysing a fabric's needs	132
7.3	Choosing an appropriate woven structure	134
7.4	Woven structures – ease of movement	143
7.5	Woven structures – wicking and thermoregulation	145
7.6	Woven structures – protection and safety	147
7.7	Three-dimensional fabrics and fully formed seamless woven garments	150
7.8	Woven structures: conductive fabrics	151
7.9	Future trends	152
7.10	Conclusion	154
7.11	Bibliography	154
8	Nonwovens in smart clothes and wearable technologies F. KANE, De Montfort University, UK	 156
8.1	Introduction	156
8.2	Nonwovens technologies and manufacturing processes	158
8.3	End-of-life considerations for nonwovens	173
8.4	Smart and performance clothing applications	174
8.5	Summary	179
8.6	Sources of further information and advice	179
8.7	References	180
9	Sensors and computing systems in smart clothing A. J. MARTIN, University of Wales Newport, UK	 183
9.1	Introduction	183
9.2	Transduction	183

9.3	Information processing	188
9.4	Application examples	192
9.5	Summary	202
9.6	Future trends	202
9.7	References	202
10	The application of communication technologies in smart clothing	205
	P. LAM, Wireless Edge Communications Limited, UK	
10.1	Introduction	205
10.2	Personal communications networks	206
10.3	Wide area networks	209
10.4	Monitoring systems and service	210
10.5	Opportunities and challenges	212
10.6	Applications	212
10.7	Future trends	213
10.8	References	213
11	Power supply sources for smart textiles	214
	G. MIN, Cardiff University, UK	
11.1	Introduction	214
11.2	Power requirements of portable devices	215
11.3	Established portable power sources	217
11.4	Energy harvesting devices	221
11.5	Energy storage and power management	227
11.6	Challenges and opportunities	228
11.7	References	230
Part III	Production technologies for smart clothing	233
12	Garment construction: cutting and placing of materials	235
	J. McCANN, University of Wales Newport, UK, S. MORSKY, HAMK Poly, Finland, and X. DONG, China Women's University, PR China	
12.1	Introduction	235
12.2	A user-led design approach	236
12.3	Considering the benefits of the military/sports layering system	237
12.4	The traditional approach to pattern development	243

12.5	Introducing a flat pattern cutting system for functional clothing	245
12.6	Three-dimensional pattern making	251
12.7	Placing of materials	254
12.8	Future trends	257
12.9	References	259
13	Developments in fabric joining for smart clothing I. C. AGNUSDEI, University of Wales Newport, UK	262
13.1	Introduction	262
13.2	Traditional manufacturing methods: the sewing machine	263
13.3	Bonding	264
13.4	Ultrasonic welding	271
13.5	'New' technologies	274
13.6	Conclusion	276
13.7	Sources of further information and advice	277
13.8	References	277
13.9	Useful internet addresses	277
14	Digital embroidery techniques for smart clothing A. TAYLOR, University of the West of England, UK	279
14.1	Introduction	279
14.2	The embroidery machine	281
14.3	Production methods	283
14.4	Engineering applications	289
14.5	Medical applications	291
14.6	Art	293
14.7	New technology and e-broidery	293
14.8	Future trends: what does the future hold?	296
14.9	Sources of further information and advice	297
14.10	References	298
15	Developments in digital print technology for smart textiles C. TREADAWAY, University of Wales Institute Cardiff, UK	300
15.1	Introduction	300
15.2	Digital imaging and printed textile design	301
15.3	Digital ink-jet printing	303
15.4	The future: printing new structures, patterns and colours	309

15.5	Digital printing for smart clothes and wearable technologies	315
15.6	Acknowledgements	317
15.7	References	317
16	Environmental and waste issues concerning the production of smart clothes and wearable technology M. TIMMINS, UK	319
16.1	Introduction	319
16.2	Textile waste	320
16.3	Environmental effects of the textile manufacturing process	321
16.4	Particular issues for smart clothes and wearable technology	323
16.5	Waste electrical and electronic equipment from smart clothes and wearable technology	326
16.6	Developing a strategy for minimising environmental effects	329
16.7	References	331
	Part IV Smart clothing products	333
17	Smart clothing and wearable technology for the health and well-being market D. BRYSON, University of Derby, UK	335
17.1	Introduction	335
17.2	Quality of life, health and well-being	336
17.3	Diagnostic and health monitoring	337
17.4	Activity monitoring devices and systems	338
17.5	Technology, need, acceptability and use	341
17.6	Future trends	342
17.7	Sources of further information and advice	343
17.8	References	343
18	Smart clothing for the ageing population J. MCCANN, University of Wales Newport, UK	346
18.1	Introduction	346
18.2	Identification of older user needs	347
18.3	Commercial realities	349

18.4	The culture of the user	351
18.5	The demands of the activity	355
18.6	The demands of the body	357
18.7	Aesthetic concerns	359
18.8	Technology design and development	364
18.9	Conclusion	365
18.10	Future trends	367
18.11	References	368
19	Smart clothing and disability: wearable technology for people with arthritis	371
	S. UNDERWOOD, University of Wales Newport, UK	
19.1	Introduction	371
19.2	Disability models	371
19.3	People-centred design	373
19.4	People-centred needs	373
19.5	Emotional design	375
19.6	Assistive devices	377
19.7	Case study of wrist splint for people with rheumatoid arthritis	381
19.8	Future trends	385
19.9	Sources of further information and advice	386
19.10	References	386
20	Wearable technology for the performing arts	388
	J. BIRINGER, Brunel University, UK, and M. DANJOUX, Nottingham Trent University, UK	
20.1	Introduction: wearables in performance	388
20.2	Design-in-motion: the emergent dress	392
20.3	Outlook: an overview of cutting edge experiments in intelligent fashion/wearables and performance	410
20.4	Sources of further information and advice	411
20.5	The future of embodied wearable performance	414
20.6	Textual notes	416
20.7	Bibliography	419
21	Branding and presentation of smart clothing products to consumers	420
	W. STAHL, Peninsula Medical School, Exeter, UK	
21.1	Introduction	420
21.2	Shopping for future clothing	422

21.3	Graphics in the area now	426
21.4	Graphics for smart clothing	429
21.5	Branding	429
21.6	Creation of brand/identity – a starting point	433
21.7	Rules for presentation?	436
21.8	Bringing it together	439
21.9	A concept	439
21.10	Conclusion	439
21.11	References	441
21.12	Bibliography	442
