

Experimentation, Validation, and Uncertainty Analysis for Engineers

THIRD EDITION

Hugh W. Coleman ■ W. Glenn Steele

CONTENTS

Preface	xv
1 Experimentation, Errors, and Uncertainty	1
1-1 Experimentation, 2	
1-1.1 Why Is Experimentation Necessary?, 2	
1-1.2 Degree of Goodness and Uncertainty Analysis, 3	
1-1.3 Experimentation and Validation of Simulations, 5	
1-2 Experimental Approach, 6	
1-2.1 Questions to Be Considered, 6	
1-2.2 Phases of Experimental Program, 7	
1-3 Basic Concepts and Definitions, 8	
1-3.1 Errors and Uncertainties, 8	
1-3.2 Degree of Confidence and Uncertainty Intervals, 14	
1-3.3 Expansion of Concept from “Measurement Uncertainty” to “Experimental Uncertainty,” 15	
1-3.4 Elemental Systematic Errors and Effects of Calibration, 17	
1-3.5 Repetition and Replication, 19	
1-4 Experimental Results Determined from Multiple Measured Variables, 21	
1-5 Guides and Standards, 24	
1-5.1 Experimental Uncertainty Analysis, 24	
1-5.2 Validation of Simulations, 25	
1-6 A Note on Nomenclature, 25	

References,	26
Problems,	27
2 Errors and Uncertainties in a Measured Variable	29
2-1 Statistical Distributions,	29
2-2 Gaussian Distribution,	33
2-2.1 Mathematical Description,	33
2-2.2 Confidence Intervals in Gaussian Distribution,	38
2-3 Samples from Gaussian Parent Population,	40
2-3.1 Statistical Parameters of Sample Population,	40
2-3.2 Confidence Intervals in Sample Populations,	41
2-3.3 Tolerance and Prediction Intervals in Sample Populations,	44
2-4 Statistical Rejection of Outliers from a Sample,	47
2-5 Uncertainty of a Measured Variable,	51
2-5.1 Systematic Standard Uncertainty Estimation,	51
2-5.2 Overall Uncertainty of a Measured Variable,	53
2-5.3 Large-Sample Uncertainty of a Measured Variable,	55
2-5.4 Uncertainty of Measured Variable by Monte Carlo Method,	57
2-6 Summary,	58
References,	58
Problems,	58
3 Uncertainty in a Result Determined from Multiple Variables	61
3-1 Taylor Series Method for Propagation of Uncertainties,	62
3-1.1 TSM for Function of Multiple Variables,	62
3-1.2 Expanded Uncertainty of a Result,	65
3-1.3 Large-Sample Approximation for Uncertainty of a Result,	65
3-1.4 Example of TSM Uncertainty Propagation,	68
3-1.5 Numerical Approximation for TSM Propagation of Uncertainties,	70
3-2 Monte Carlo Method for Propagation of Uncertainties,	71
3-2.1 General Approach for MCM,	71
3-2.2 Example of MCM Uncertainty Propagation,	74
3-2.3 Coverage Intervals for MCM Simulations,	78
3-2.4 Example of Determination of MCM Coverage Interval,	80
References,	81
Problems,	82

4	General Uncertainty Analysis: Planning an Experiment and Application in Validation	85
4-1	Overview: Using Uncertainty Propagation in Experiments and Validation, 85	
4-1.1	Application in Experimentation, 86	
4-2	General Uncertainty Analysis Using the Taylor Series Method (TSM), 86	
4-3	Application to Experiment Planning (TSM), 88	
4-3.1	Simple Case, 88	
4-3.2	Special Functional Form, 92	
4-4	Using TSM Uncertainty Analysis in Planning an Experiment, 96	
4-5	Example: Analysis of Proposed Particulate Measuring System, 98	
4-5.1	The Problem, 98	
4-5.2	Proposed Measurement Technique and System, 98	
4-5.3	Analysis of Proposed Experiment, 99	
4-5.4	Implications of Uncertainty Analysis Results, 101	
4-5.5	Design Changes Indicated by Uncertainty Analysis, 102	
4-6	Example: Analysis of Proposed Heat Transfer Experiment, 103	
4-6.1	The Problem, 103	
4-6.2	Two Proposed Experimental Techniques, 104	
4-6.3	General Uncertainty Analysis: Steady-State Technique, 106	
4-6.4	General Uncertainty Analysis: Transient Technique, 110	
4-6.5	Implications of Uncertainty Analysis Results, 112	
4-7	Examples of Presentation of Results from Actual Applications, 113	
4-7.1	Results from Analysis of a Turbine Test, 113	
4-7.2	Results from Analysis of a Solar Thermal Absorber/Thruster Test, 114	
4-8	Application in Validation: Estimating Uncertainty in Simulation Result due to Uncertainties in Inputs, 115	
	References, 116	
	Problems, 117	
5	Detailed Uncertainty Analysis: Designing, Debugging, and Executing an Experiment	121
5-1	Using Detailed Uncertainty Analysis, 121	
5-2	Detailed Uncertainty Analysis: Overview of Complete Methodology, 124	

- 5-3 Determining Random Uncertainty of Experimental Result, 128
 - 5-3.1 Example: Random Uncertainty Determination in Compressible Flow Venturi Meter Calibration Facility, 130
 - 5-3.2 Example: Random Uncertainty Determination in Laboratory-Scale Ambient Temperature Flow Test Facility, 132
 - 5-3.3 Example: Random Uncertainty Determination in Full-Scale Rocket Engine Ground Test Facility, 135
 - 5-3.4 Summary, 137
- 5-4 Determining Systematic Uncertainty of Experimental Result, 138
 - 5-4.1 Systematic Uncertainty for Single Variable, 138
 - 5-4.1.1 Some Practical Considerations, 140
 - 5-4.1.2 Digital Data Acquisition Errors, 142
 - 5-4.1.3 Property Value Uncertainty, 143
 - 5-4.2 Systematic Uncertainty of a Result Including Correlated Systematic Error Effects, 145
 - 5-4.2.1 Example: Correlated Errors in a Temperature Difference, 147
 - 5-4.2.2 Example: Correlated Errors in an Average Velocity, 150
 - 5-4.3 Comparative Testing and Correlated Systematic Error Effects, 151
 - 5-4.3.1 Result Is a Difference of Test Results, 152
 - 5-4.3.2 Result Is a Ratio of Test Results, 156
- 5-5 Comprehensive Example: Sample-to-Sample Experiment, 157
 - 5-5.1 Problem, 157
 - 5-5.2 Measurement System, 158
 - 5-5.3 Zeroth-Order Replication-Level Analysis, 159
 - 5-5.4 First-Order Replication-Level Analysis, 163
 - 5-5.5 *N*th-Order Replication-Level Analysis, 164
- 5-6 Comprehensive Example: Debugging and Qualification of a Timewise Experiment, 165
 - 5-6.1 Basic Ideas, 165
 - 5-6.2 Example, 166
- 5-7 Some Additional Considerations in Experiment Execution, 172
 - 5-7.1 Choice of Test Points: Rectification, 172
 - 5-7.1.1 Example of Use of Rectification, 175
 - 5-7.2 Choice of Test Sequence, 177
 - 5-7.3 Relationship to Statistical Design of Experiments, 179
 - 5-7.4 Use of Balance Checks, 180
 - 5-7.4.1 Application to a Flow System, 180
 - 5-7.5 Use of a Jitter Program, 183
 - 5-7.6 Comments on Transient Testing, 184

References,	186	
Problems,	187	
6 Validation Of Simulations		193
6-1 Introduction to Validation Methodology,	193	
6-2 Errors and Uncertainties,	194	
6-3 Validation Nomenclature,	195	
6-4 Validation Approach,	197	
6-5 Code and Solution Verification,	200	
6-6 Estimation of Validation Uncertainty u_{val} ,	200	
6-6.1 Estimating u_{val} When Experimental Value D of Validation Variable Is Directly Measured (Case 1),	201	
6-6.2 Estimating u_{val} When Experimental Value D of Validation Variable Is Determined from Data Reduction Equation (Cases 2 and 3),	204	
6-6.2.1 No Measured Variables Share Identical Error Sources (Case 2),	205	
6-6.2.2 Measured Variables Share Identical Error Sources (Case 3),	208	
6-6.3 Estimating u_{val} When Experimental Value D of Validation Variable Is Determined from Data Reduction Equation That Itself Is a Model (Case 4),	209	
6-7 Interpretation of Validation Results Using E and u_{val} ,	213	
6-7.1 Interpretation with No Assumptions Made about Error Distributions,	213	
6-7.2 Interpretation with Assumptions Made about Error Distributions,	214	
6-8 Some Practical Points,	215	
References,	215	
7 Data Analysis, Regression, and Reporting of Results		217
7-1 Overview of Regression Analysis and Its Uncertainty,	218	
7-1.1 Categories of Regression Uncertainty,	218	
7-1.2 Uncertainty in Coefficients,	219	
7-1.3 Uncertainty in Y from Regression Model,	219	
7-1.4 (X_i, Y_i) Variables Are Functions,	221	
7-2 Least-Squares Estimation,	221	
7-3 Classical Linear Regression Uncertainty: Random Uncertainty,	223	

7-4	Comprehensive Approach to Linear Regression Uncertainty, 225	
7-4.1	Uncertainty in Coefficients: First-Order Regression, 225	
7-4.2	Uncertainty in Y_c from Regression Model: First-Order Regression, 227	
7-4.3	Higher Order Regressions, 229	
7-5	Reporting Regression Uncertainties, 229	
7-6	Regressions in Which X and Y Are Functional Relations, 231	
7-7	Examples of Determining Regressions and Their Uncertainties, 233	
7-7.1	Experimental Apparatus, 234	
7-7.2	Pressure Transducer Calibration and Uncertainty, 235	
7-7.3	Venturi Discharge Coefficient and Its Uncertainty, 238	
7-7.4	Flow Rate and Its Uncertainty in a Test, 242	
7-8	Multiple Linear Regression, 246	
	References, 248	
	Problems, 248	
Appendix A	Useful Statistics	251
Appendix B	Taylor Series Method (TSM) for Uncertainty Propagation	257
B-1	Derivation of Uncertainty Propagation Equation, 258	
B-2	Comparison with Previous Approaches, 262	
B-2.1	Abernethy et al. Approach, 262	
B-2.2	Coleman and Steele Approach, 263	
B-2.3	ISO Guide Approach, 264	
B-2.4	AIAA Standard [11], AGARD [12], and ANSI/ASME [13] Approach, 265	
B-2.5	NIST Approach, 265	
B-3	Additional Assumptions for Engineering Applications, 265	
B-3.1	Approximating the Coverage Factor, 266	
	References, 268	
Appendix C	Comparison of Models for Calculation of Uncertainty	271
C-1	Monte Carlo Simulations, 271	
C-2	Simulation Results, 274	
	References, 281	
Appendix D	Shortest Coverage Interval for Monte Carlo Method	283
	Reference, 284	

Appendix E Asymmetric Systematic Uncertainties 285

- E-1 Procedure for Asymmetric Systematic Uncertainties Using TSM Propagation, 286
- E-2 Procedure for Asymmetric Systematic Uncertainties Using MCM Propagation, 290
- E-3 Example: Biases in a Gas Temperature Measurement System, 290
- References, 297

Appendix F Dynamic Response of Instrument Systems 299

- F-1 General Instrument Response, 299
- F-2 Response of Zero-Order Instruments, 301
- F-3 Response of First-Order Instruments, 302
- F-4 Response of Second-Order Instruments, 304
- F-5 Summary, 308
- References, 308
