

Intensive Quenching Systems: Engineering and Design

N.I. Kobasko, M.A. Aronov, J.A. Powell and G.E. Totten

Contents

Preface

Preface	vi
Introduction	vii
Chapter 1—Thermal and Metallurgical Basics of Design of High-Strength Steels	1
<i>by N. I. Kobasko</i>	
Chapter 2—Transient Nucleate Boiling and Self-Regulated Thermal Processes	24
<i>by N. I. Kobasko</i>	
Chapter 3—Critical Heat Flux Densities and Characteristics of Heat Transfer During Film Boiling	45
<i>by N. I. Kobasko, M. A. Aronov, and J. A. Powell</i>	
Chapter 4—Convective Heat Transfer	62
<i>by N. I. Kobasko</i>	
Chapter 5—Generalized Equations for Determination of Cooling Time for Bodies of Any Shape During Quenching	74
<i>by N. I. Kobasko</i>	
Chapter 6—Regular Thermal Process and Kondratjev Form Factors	91
<i>by N. I. Kobasko</i>	
Chapter 7—Stress State of Steel Parts During Intensive Quenching	107
<i>by N. I. Kobasko</i>	
Chapter 8—Steel Quenching in Liquid Media Under Pressure	121
<i>by N. I. Kobasko</i>	
Chapter 9—The Steel Superstrengthening Phenomenon	135
<i>by N. I. Kobasko</i>	
Chapter 10—Intensive Steel Quenching Methods	151
<i>by N. I. Kobasko</i>	
Chapter 11—Design of Industrial Quenching Systems	170
<i>by N. I. Kobasko and G. E. Totten</i>	
Chapter 12—Review of Practical Applications of Intensive Quenching Methods	185
<i>by M. A. Aronov, N. I. Kobasko, and J. A. Powell</i>	
Chapter 13—Inverse Problems in Quench Process Design	210
<i>by N. I. Kobasko and V. V. Dobryvechir</i>	
Index	230
