

Second Edition

Batters *and* Breadings

in Food
Processing

Edited by
Karel Kulp, Robert Loewe,
Klaus Lorenz, and
Janette Gelroth

Contents

Chapter 1

1 **Batters and Breadings—Past, Present, and Future Markets**

Robert Loewe

Definition of the Coated-Foods Market • Past Trends for Coated Foods
▪ Present Marketing of Coated Foods • Coated Foods in the Marketplace
The Future for Coated Foods

Chapter 2

9 **Ingredient Selection for Batter and Breeding Systems**

Robert Loewe

An Evolving Industry • Batter Classification • Precooking and Freezing
of Coated Products • Reconstitution of Coated Products • Commonly Coated
Substrates • Critical Coating Characteristics • Judging a Coating System
▪ Formulations of Batter Systems • Flour, as Defined in Batters and Breadings
▪ Functionality of Wheat Flour Protein and Starch • Nonwheat Flour • Chemical
Leavening • Shortening and Oil • Egg and Milk Products • Starches
▪ Gums • Flavorings and Seasonings • The Work Ahead

Chapter 3

25 **Dry-Milled Corn Ingredients in Food Coatings**

*Lawrence A. Johnson, Nicolas Deak, Nathalie Vignaux, and Roger M.
Burge (deceased)*

Corn Processing • Dry-Milled Corn Products • Types of Corn • Corn Ingredients
in Batters and Breadings • Standards of Identity for Dry-Milled Corn Ingredients
▪ General Functions of Dry-Milled Corn Ingredients • Dry-Milled Corn
Ingredients in Batters • Dry-Milled Corn Ingredients in Breadings • Viscosity
Control • Summary

Chapter 4

53 **Frying Fats for Coated Foods**

Clyde E. Stauffer

Chemistry of Fats and Oils • The Frying Operation • Troubleshooting

Chapter 5

73 **Effective Use of Flavorings and Seasonings in Batter and Breeding Systems**

Darrel R. Suderman

Basic Development of Batters and Breadings • Development of Batter
and Breeding Flavor Systems • Recent Developments • Summary

Chapter 6

91 **Factors Affecting Performance Characteristics of Flours in Batters**

Maureen Olewnik, Karel Kulp, and Janette Gelroth

Wheat Flour Function • Recent Research • Rice Flour Function • Plates

Chapter 7

117 Functionality of Hydrocolloids in Batter Coating Systems

Andrew Grazela and Marc A. Meyers

Overview ▪ Uses of Food Gums in Batter Systems ▪ Alternate Cooking Technologies ▪ Addition and Application of Gums in Coating Systems ▪ Considerations When Choosing a Gum in a Batter System ▪ Gums with Unique Features and Functions ▪ Future Developmental Work ▪ Summary

Chapter 8

139 Food Allergens: Issues and Concerns in Batter and Breading Applications

Janette Gelroth and Debi Rogers

What Are Food Allergens? ▪ Allergic Reactions ▪ Allergen-Testing Procedures ▪ Common Allergens in Batters and Breadings ▪ Strategies to Address Allergens in the Food Industry ▪ Allergen Labeling ▪ Summary

Chapter 9

153 Nutrition Information Related to Battered and Breaded Food Products

M. Ann Bock and Nancy Flores

General Nutritional Components of Typical Batter and Breading Mixes ▪ Nutritional Attributes of Flours and Starches Commonly Used for Batters and Breadings ▪ Nutritional Attributes of Other Components of Coatings ▪ Nutritional Attributes of Components Used to Form a Batter or Facilitate Adherence of a Dry Coating to a Base Food ▪ Impact of Cooking Processes on the Nutritional Attributes of Coated Foods ▪ Nutritional Attributes of Selected Commonly Coated Foods ▪ Summary

Chapter 10

169 Breadings—What They Are and How They Are Used

Richard Y. Chen, Yujie Wang, and David Dyson (deceased)

Functional Attributes of Breadings ▪ Effects of Key Ingredients on the Qualities of Breadings ▪ Breading Categories ▪ Characteristics of Finished Products ▪ Summary

Chapter 11

185 Heat and Mass Transfer in Foods During Deep-Fat Frying

R. Paul Singh and Sukumar Debnath

Heat Transfer During Frying ▪ Interfacial Properties ▪ Deep-Fat Frying of Selected Foods ▪ Heat Transfer Coefficients ▪ Heat Transfer into Foods During Frying ▪ Mathematical Models Describing Heat Transfer ▪ Mass Transfer During Frying ▪ Factors Affecting Oil Uptake and Migration ▪ Physicochemical Changes During Frying ▪ Effect of Edible Coatings on Frying ▪ Summary

Chapter 12

207 Technology of Microwavable Coated Foods

Robert F. Schiffmann

Why Microwaves Heat ▪ Microwaves and Moisture Transport ▪ The Phenomenon of Crispness As Related to Coated Foods ▪ Reconstitution of Breaded Products in Microwave Ovens ▪ Discussion

Chapter 13

219 Batter and Breading Process Equipment

Robert Swackhamer and Todd Gerold

Overview ▪ Some Coating Process Variables ▪ Coating Equipment ▪ Operations
▪ The Future

Chapter 14

243 Application of Batters and Breadings to Various Substrates

Linfeng Wang and Darrel R. Suderman

Application to Poultry ▪ Application to Seafood ▪ Application to Red Meats
▪ Application to Vegetables ▪ Application to Cheese, Nuts, and Other Products
▪ Challenges of Non-Frying Cooking ▪ Summary

Chapter 15

263 Measurement and Interpretation of Batter Rheological Properties

Hulya Dogan and Jozef L. Kokini

Overview ▪ Rheological Measurements ▪ Rheological Properties of Batters
▪ Conclusions

Chapter 16

301 Food Coating Troubleshooting

Ronald J. Sasiela

Low-Carbohydrate Coatings ▪ Reduced-Fat Coating Systems ▪ Reduced Trans
Fat and Effects of Frying Oil on Acrylamide Formation ▪ Bold Flavors in Coated
Food Products ▪ Grilled and Sauced Coated Foods, Aquaculture Issues
▪ Reduced-Salt Coatings ▪ Growing Market Popularity of “Fresh” Food
and Ingredients ▪ Popcorn-Size Coated-Food Products ▪ Guinness World Record
Frying Event

Chapter 17

313 Food Coating Patent Review, 1990–2007

Ronald J. Sasiela

Patents ▪ Appendix

331 Index
