

Second Edition

OATS

CHEMISTRY AND TECHNOLOGY

Francis H. Webster and Peter J. Wood, Editors

Contents

- 1. World Oat Production, Trade, and Usage.** R. STRYCHAR ♦ 1
 - Production ♦ 1
 - Yields ♦ 4
 - Trade ♦ 5
 - Economic Value ♦ 6
 - Usage ♦ 6
 - Feed Use | Human Consumption
 - Grading Standards ♦ 8
 - Key Government Policy ♦ 9
 - EU Export Subsidies | EU CAP Reform | U.S. Loan Rates
 - Future Trends ♦ 10
- 2. Oat Breeding.** JOHN VALENTINE, ALEXANDER (SANDY) A. COWAN, and ATHOLE H. MARSHALL ♦ 11
 - Genetic Resources ♦ 11
 - Breeding Objectives ♦ 13
 - Regional Adaptability | Grain Yield | Resistance to Lodging | Disease and Pest Resistance | Winter Hardiness | Drought Tolerance | Use of Life Cycle Assessment and Breeding for Sustainability | Milling Quality | Health Benefits for Consumers | Taste and Texture Benefits for Consumers | Premium Feed Quality | Fodder Oats
 - Breeding Methods ♦ 21
 - Use of Molecular Genetics
 - Funding of Breeding and Associated Research ♦ 24
- 3. Hulless Oat Development, Applications, and Opportunities.** VERNON D. BURROWS ♦ 31
 - Breeding ♦ 32
 - Covered (Husked) Oats | Hulless (Naked) Oats | Genetics | Incomplete Expression of Hullessness | Improving the Expression of Hulless Genes | Variation in Floral Morphology | Rachilla Length | Variation and Modification of Groat Morphology | Preharvest Sprouting | Diseases
 - Commercial Production and Uses ♦ 39
 - Harvesting | Grain Storage | Special Processing of Hulless Oats | Uses of Hulless Oats in Food | Use of Hulless Oats in Animal Feed | Nonfood Uses for Hulless Oats
 - Summary ♦ 48
 - Future Hulless Oat Development, Applications, and Opportunities ♦ 49
- 4. Molecular Genetics of Quality in Oats.** STEPHEN J. MOLNAR, NICHOLAS A. TINKER, HEIDI F. KAEPLER, and HOWARD W. RINES ♦ 51
 - Genetic Mapping and QTL Analysis in Oats ♦ 52
 - Recombination Mapping | Recombination Mapping in Diploid Oats | Recombination Mapping in Hexaploid Oats | Comparative Mapping | Physical Mapping | Chromosome-Specific Libraries | QTL Analysis
 - Molecular Genetics of Chemical Composition ♦ 56
 - Oil Content | Beta-Glucan Content | Protein Content | Other Quality Traits Based on Chemical Composition
 - Genetics of Physical Kernel Traits and Milling Quality ♦ 59
 - Genetics of Disease Resistance ♦ 60
 - Genetics of Agronomic Traits ♦ 61
 - Grain Yield | Heading Date | Other Agronomic Traits

Utilization of Molecular Markers ♦ 62

User-Friendly Molecular Markers | Fingerprinting and Molecular-Marker-Assisted Breeding

Interspecific Crosses and Doubled Haploids ♦ 63

Oat Tissue Culture ♦ 64

Development and Enhancement of Oat Tissue Culture | Tissue-Culture-Induced Variation in Oats | Role of Oat Tissue Culture in Grain Quality Enhancement

Oat Transformation ♦ 66

Development of Oat Transformation Systems | Applications of Genetic Engineering to Study and Enhance Grain Quality

Functional Genomics of Oats ♦ 67

Expressed Sequence Tags | Microarrays

Organelle Genetics ♦ 68

Bioinformatics ♦ 68

Future of Molecular Genetics of Oat Quality ♦ 69

5. Microstructure and Chemistry of the Oat Kernel. S. S. MILLER and R. G. FULCHER ♦ 77

Analytical Techniques ♦ 77

Microscopic Techniques | Spectroscopic Techniques

Structure and Chemistry of the Mature Oat ♦ 83

Hull | Bran | Starchy Endosperm | Germ

Summary ♦ 90

6. Nutrient Composition and Nutritional Quality of Oats and Comparisons with Other Cereals.

ROBERT W. WELCH ♦ 95

Background ♦ 95

Oat Production and Consumption | Cereals in Health and Disease | Oat Milling | Nutrient Composition vs. Nutritional Quality

Natural Variation in Nutrient Composition ♦ 96

Proximate Constituents ♦ 96

Methodological Considerations | Proximate Values

Energy Content ♦ 98

Fatty Acid Composition ♦ 98

Dietary Fiber Components ♦ 98

Solubility and Monosaccharide Composition | β -Glucan | Fructans

Micronutrient Composition ♦ 100

Minerals | Vitamins

Nutritional Quality ♦ 101

Nutrient Density Scores | Protein Quality | Digestibility | Availability

Oat Bran and Wheat Bran ♦ 104

Other Minor Components ♦ 105

Oats and Celiac Disease ♦ 105

Overview ♦ 105

7. Oat Starch: Physicochemical Properties and Function. SEDAT SAYAR and PAMELA J. WHITE ♦ 109

Isolation and Purification of Oat Starch ♦ 109

Chemical Composition of Oat Starch ♦ 110

Noncarbohydrate Component | Carbohydrate Components

Physical Properties and Granule Morphology ♦ 113

Granule Type, Size, and Size Distribution | X-Ray Diffraction Patterns and Relative Crystallinity

Physicochemical and Rheological Properties of Oat Starch ♦ 114

Gelatinization Properties | Swelling Power and Amylose Leaching | Viscosity, Pasting, and Paste Properties | Susceptibility of Oat Starch to Acid and Enzyme Hydrolysis

Oat Starch in Food and Other Industries ♦ 120

Future Work ♦ 120

8. Storage Proteins. DAVID M. PETERSON ♦ 123

Classification and Solubility Fractionation ♦ 123

Characterization ♦ 124

Amino Acid Composition | Isolation and Physical Properties

Synthesis and Cellular Location ♦ 128

Synthesis | Location | Protein Bodies

- Genetic Effects ♦ 132
 - Storage Protein Genes | Control of Gene Expression | Genotypic Differences and Inheritance
- Development ♦ 133
 - Seed Maturation | Germination | Proteolytic Enzymes
- Environmental Effects ♦ 135
 - Climate | Fertility | Diseases
- Food, Feed, and Functionality ♦ 136
 - Nutritional Value of Oat Protein | Protein Concentrates
- Summary ♦ 139

9. Oat Lipids, Enzymes, and Quality. PEKKA LEHTINEN and ANU KAUKOVIRTA-NORJA ♦ 143

- Lipid Content and Lipid Composition ♦ 143
 - Oil Content and Fatty Acid Composition | Lipid Class Composition | Lipid Synthesis in Oats | Lipid Content and Agricultural and Quality Variables | Effect of Growing Conditions on Lipid Content | Effect of Cultivar on Oat Lipids | Heritability of Oat Lipids
- Localization of Lipids in Oat Hull and Kernel ♦ 147
- Starch Lipids ♦ 147
- Analysis of Total Lipids and Starch Lipids ♦ 148
- Lipid-Related Enzymes ♦ 148
 - Lipase | The Oxidative Enzymes Lipoxygenase and Lipoperoxidase
- Oat Antioxidants and Lipid Stability ♦ 149
 - Lipophilic Antioxidants | Other Antioxidants
- Processing and Storage ♦ 150
 - Dehulling and Kernel Breakage | Steaming and Kilning | Fractionation | Extrusion | Germination and Malting | Changes in Oat Lipids During Storage
- Utilization of Oat Lipids and Lipid-Related Enzymes ♦ 152
 - Use of Oat Oil | Oat Lipase and Peroxygenase

10. Oat Phenolics: Biochemistry and Biological Functionality. F. W. COLLINS ♦ 157

- Free Phenolic Acids and Related Compounds ♦ 157
 - Biochemistry | Functionality
- Alkylphenols and Related Compounds ♦ 166
 - Biochemistry | Functionality
- Flavonoids and Related Compounds ♦ 168
 - Biochemistry | Functionality
- Lignans ♦ 175
 - Biochemistry | Functionality
- Aminophenolics ♦ 180
 - Biochemistry | Functionality
- Phenolic Acid Amides, Esters, and Polymeric Ethers ♦ 184
 - Phenolic Acids Conjugated with Amines | Phenolic Esters with *n*-Alkanols | Phenolic Esters with Sugars and Polysaccharides | Phenolic Polymeric Ethers and Lignin
- Summary and Future Research Directions ♦ 205

11. Oat β -Glucan: Properties and Function. PETER J. WOOD ♦ 219

- Occurrence and Location ♦ 219
- Extraction ♦ 220
 - General Considerations and Principles | Methods and Reagents
- Purification ♦ 224
- Analysis ♦ 224
- Physicochemical Properties ♦ 226
 - Structure | Molecular Weight and Conformation | Solubility | Rheology | Dye Binding
- Physiological Effects of Oat β -Glucan ♦ 243
 - Animal and *in Vitro* Studies | Human Clinical Studies
- Summary ♦ 247

12. Oats as a Functional Food for Health. K. M. BEHALL and JUDITH HALLFRISCH ♦ 255

- Blood Lipid Effects in Animals ♦ 256
 - Rats | Chicks, Rabbits, and Hamsters

- Blood Lipid Effects in Humans ♦ 257
 - Factors Affecting Blood Lipid Response | Blood Lipid Fractions, Particle Size, and Number | Mechanisms for Decreasing Blood Lipids
- Blood Glucose and Insulin Response in Humans ♦ 262
 - Factors Affecting Response | Mechanisms | Summary of Glycemic Response Effects
- Blood Pressure ♦ 266
- Conclusions ♦ 267
- 13. Current and Potential Health Claims for Oat Products.** REBECCA S. MATHEWS ♦ 275
 - Purpose and Impact of Health Claims ♦ 275
 - Scientific Substantiation of Health-Related Claims in the United States ♦ 276
 - Health Claims | Structure/Function Claims | Nutrient Content Claims
 - Authorized Health Claims in the United States That Oat Products May Utilize ♦ 278
 - Oat Soluble Fiber and the Reduced Risk of Coronary Heart Disease (NLEA Claim) | Whole-Grain Claims Based on Authoritative Statements | Other Eligible NLEA Health Claims | Potential Claim Evidence for Diabetes Risk Reduction and Diabetes Management | Potential Claim Evidence for Satiety and Weight Loss Effects | Potential Claim Evidence for Whole Grains and Weight Maintenance | Potential Claim Evidence for Blood Pressure Effects
 - Approved Oat and Whole-Grain Health Claims in Other Countries ♦ 292
 - Europe | Malaysia
 - Conclusions ♦ 295
- 14. Oat Milling: Specifications, Storage, and Processing.** NOËL GIRARDET and F. H. WEBSTER ♦ 301
 - Milling-Oat Specifications ♦ 301
 - Oat Storage and Handling ♦ 303
 - Oat Milling ♦ 304
 - Milling Overview | Cleaning | Grading | Dehulling | Kiln Drying | Processing of Dried Groats | Oat-Milling By-Products
 - Summary and Discussion ♦ 316
- 15. Oat Dietary Fiber: Commercial Processes and Functional Attributes.** DAVID G. STEVENSON and GEORGE E. INGLETT ♦ 321
 - Methods to Enrich β -Glucan and Improve Functionality ♦ 322
 - Dry-Milling Methods | Methods Incorporating Organic Solvents | Aqueous Methods | Methods That Use Enzymes | Extraction Methods Utilizing Acid or Base Conditions or Temperature
 - Oat-Hull Fiber ♦ 327
 - Summary ♦ 328
- 16. Flavor and Texture in Processing of New Oat Foods.** MARJATTA SALMENKALLIO-MARTTILA, RAIJA-LIISA HEINIÖ, ANU KAUKOVIRTA-NORJA, and KAISA POUTANEN ♦ 333
 - Effect of Processing on Oat Flavor ♦ 334
 - Flavor of Native Oats | Effect of Toasting on Flavor | Effect of Malting on Flavor | Effect of Additional Heat Processing on Milled Oat Flavor
 - Influence of Storage on Product Quality ♦ 337
 - Changes in Flavor of Oat Products During Storage | Microbiological Quality
 - Effect of Processing on Oat Texture ♦ 338
 - General Factors Affecting Texture | Texture of Processed Oats
 - The Potential and The Challenges of Oats in Foods ♦ 341
 - End Uses and Consumer Perception of Oats | Incorporation of Oat Fractions into Foods and Health Claims | Future of Oat Products
- 17. Oat Utilization: Past, Present, and Future.** F. H. WEBSTER ♦ 347
 - Products and Applications in Foods ♦ 348
 - Traditional Oat Products | Food Applications | Oat-Based Functional Food Ingredients
 - Health Benefits Associated with Oat Consumption ♦ 351
 - Health Benefits and Claims | Micronutrients | Celiac Disease
 - Miscellaneous Oat Applications ♦ 354
 - Oat Antioxidants | Adhesives | Cosmetic Products | Cariostatic Properties | Furfural Synthesis | Miscellaneous Oat Hull Applications | Oat Enzymes | Pharmaceutical Products
 - Summary ♦ 356
- Index** ♦ 363
