Contents

List of figures	iv
List of tables	vi
1. Introduction	1
2. Mechanisms, definitions and units	3
2.1 Porosity and permeability	3
2.2 Transport mechanisms in concrete	3
2.3 Relationships	4
2.4 Units	6
2.5 Conversion factors and permeability measurement	7
2.6 Further issues	8
2.7 Choice of test method	8
3. In-situ tests	10
3.1 Introduction	10
3.2 Water absorption	11
3.2.1 Standpipe test	11
3.2.2 Initial Surface Absorption Test (ISAT)	11
3.2.3 Autoclam	13
3.2.4 Figg method	15
3.2.5 Steinert	16
3.3 Gas permeability	17
3.3.1 Schonlin air permeability test	17
3.3.2 Surface airflow test (SAT)	17
3.3.3 Vacuum test	18
3.3.4 Autoclam	18
3.3.5 Torrent Permeability tester	18
3.3.6 Hong-Parrott	19

3.3.7	Figg air test	20
3.3.8	Other methods	20
3.4	Performance of test methods	21
3.5	Depth of carbonation	21
3.6	Ionic diffusion by electrical measurement	22
3.7	Drill hole permeability test	23
3.8	Leak testing of completed structures	23
4.	Laboratory tests on samples from site	25
4.1	Introduction	25
4.2	Water absorption	26
4.2.1	Shallow immersion	26
4.2.2	Capillary rise	27
4.3	Pressure-induced flow – liquids	31
4.3.1	Measurement by flow	31
4.3.2	Measurement by penetration	37
4.3.3	Relationship between permeability coefficients derived from penetration and flow measurements	40
4.4	Pressure-induced flow – gases	41
4.5	Gas diffusion	44
4.6	Water vapour diffusion	46
4.7	Ionic diffusion	48
4.7.1	Introduction	48
4.7.2	Drilling and sample analysis	48
4.7.3	Concentration difference	49
4.7.4	Electrical current flow (Rapid Chloride Permeability Test) (RCPT)	51
4.7.5	Rapid migration test	52
4.7.6	Chloride conductivity test	53
4.7.7	Immersion testing and the Ponding Test	54
4.7.8	Chloride diffusion by electrochemistry	54
4.7.9	Conclusions	55
5.	Permeability results from site-cast concrete – case histories	56
5.1	Introduction	56
5.2	Examples of ISAT used for specification compliance	56
5.3	Absorption and ISAT measurements on sprayed concrete	59
5.4	Absorption measurements related to curing regimes	59
5.5	Absorption and permeability by through-flow	60

5.6	Permeability by penetration rate and through-flow	60
5.7	British Nuclear Fuels Ltd (BNFL) water permeability and chloride ion penetration tests	60
5.8	Rapid Chloride Permeability Test (RCPT) for field control in Qatar	63
5.9	Permeability of lightweight aggregate concrete	63
5.10	Borehole permeability measurements in roller-compacted concrete dams	64
5.11	Diffusion of chlorides into structures	64
5.12	Leak testing	64
6.	Use of permeability results for specification compliance	65
6.1	Introduction	65
6.2	Variability of test results	66
6.3	Philosophical comment on practical implications	68
7.	Conclusions	69
