CONTENTS

1. Introduction	1
2. Three-dimensional fabric manufacturing process	2
2.1. Manufacturing of different types of fabrics by 2D weaving	2
2.1.1 Production of interlaced 3D fabric	2
2.1.2 Production of non-interlaced 3D fabric	3
2.2. Differentiation between 2D and actual 3D weaving processes	4
2.3. Basic aspects of non-interlaced 3D fabric manufacturing process	6
3. Classification of shedding systems	6
3.1. Shedding systems in 2D weaving	8
3.1.1 Reciprocatory type of shedding	8
3.1.2 Rotary type of shedding	9
3.2. Shedding system of 3D weaving	11
4. Theoretical and practical aspects of 3D weaving	12
4.1. Technical aspects of conventional 2D weaving process	12
4.2. Manufacturing of 2.5D fabrics by conventional method	14
4.3. Fundamental definitions	14
4.4. Basic requirements for actual 3D weaving process	14
4.5. Shedding principle in 3D weaving method	15
4.6. Practical significance of 3D process	16
5. Noobing technique	16
5.1. Basic principle	16
5.2. Mechanical description	17
6. Computer-aided weaving of composite preforms	18
6.1. Flattening of 3D preforms	18
6.1.1 Modelling and methodology	19
6.1.2 Development of software design	19
6.2. Option for selection of optimal flattening	20
6.3. Analysis of flattened structure features	21
6.3.1 Fundamental concept of flattened structures	21
6.3.2 Analysis of weft insertion paths	22
6.3.3 Generation of weaving instructions	22
6.4. Generation and weaving of a 3D net-shaped preform	22
6.4.1 The configuration of a flattened preform	23
6.4.2 Related terminologies	24
6.4.3 Warp thread arrangement	24
6.4.4 Algorithm for calculation of yarn interlacing sequence	25

7. Weaving of advanced composite preforms	25
7.1. Available methods	26
7.2. Underlying concept	26
7.3. Weaving of single-layer fabrics	27
7.4. Weaving of treble-layer fabrics	27
7.5. Technical aspects of woven preforms	28
7.6. Characterisation of woven preforms	31
8. Technology of 3D woven domed fabrics	33
8.1. Review of earlier method	34
8.2. Technical aspects of 3D domed fabrics	34
8.3. Design aspects of 3D domed fabrics	36
8.4. Testing and evaluation of dome effect	37
8.5. Dome index for single-layer fabrics	37
8.6. Dome index for multi-layer fabrics	37
8.7. Dome depth for single-layer fabrics	37
8.8. Dome depth for multi-layer fabrics	38
8.9. Comparison of dome index and depth	38
9. Use of glass yarns in 3D preforms	38
9.1. Manufacturing of textured glass yarn reinforcement	39
9.2. Manufacturing of flat continuous filament glass yarn reinforcement	40
9.3. Evaluation and results	41
10. Weaving of medical textiles	42
10.1. Comparison of woven and knitted grafts	42
10.2. Manufacturing technology	42
11. Computer-aided designing/manufacturing of advanced woven textile preforms	45
11.1. Orthogonal structures	46
11.2. Angle-interlock structures	48
11.3. Automatic generation of lifting plans and requirements of weaver's beams	50
11.4. Programming implementation	50
11.5. Three-dimensional visualisation	51
12. Application areas of 3D woven fabrics	53
13. Summary	54
