CONTENTS

| | |
|--|------------|
| 1. Industrial air pollution and role of filter unit | 195 |
| 1.1. Industrial emission | 195 |
| 1.2. Impact of fine particulate matter | 200 |
| 1.3. Role of filter unit and allied development | 202 |
| 2. Present status of pulse-jet filter in industry | 206 |
| 2.1. General | 206 |
| 2.2. About pulse-jet filter | 213 |
| 2.3. Classification and utilities | 217 |
| 3. Mode of filtration | 219 |
| 3.1. Inside-to-outside filtration | 219 |
| 3.2. Outside-to-inside filtration | 221 |
| 3.2.1. <i>Bag filters</i> | 222 |
| 3.2.2. <i>Rigidized/cartridge media</i> | 227 |
| 3.2.3. <i>Envelope filter</i> | 229 |
| 3.2.4. <i>Ceramic filter</i> | 229 |
| 4. Basic construction of a filter unit | 232 |
| 4.1. General | 232 |
| 4.2. Dust-laden air-feeding zone | 233 |
| 4.3. Filter unit | 234 |
| 4.4. Dust disposal system | 245 |
| 4.5. Fan (air mover) and discharge stack | 245 |
| 4.6. Auxiliary attachment | 245 |
| 4.7. Safety features for explosive and/or inflammable dust | 247 |
| 5. Selection and designing of filter media | 250 |
| 5.1. General consideration | 250 |
| 5.2. Material of the fabric | 253 |
| 5.2.1. <i>Material type</i> | 253 |
| 5.2.2. <i>Fiber fineness and cross-sectional shape</i> | 261 |
| 5.3. Fabric types and specifications | 262 |
| 5.4. Fabric finish | 263 |
| 5.4.1. <i>General</i> | 264 |
| 5.4.2. <i>Membrane filters</i> | 265 |
| 5.4.3. <i>Coated filters</i> | 268 |
| 5.4.3.1. <i>Surface coating</i> | 268 |
| 5.4.3.2. <i>Steeping</i> | 270 |
| 5.4.3.3. <i>Foam coating</i> | 270 |
| 5.4.3.4. <i>Use of inert powders</i> | 270 |
| 5.5. Layered structure | 271 |

| | |
|--|-----|
| 5.6. Filter element and its fabrication | 274 |
| 6. Separation of difficult and fine particulates | 274 |
| 6.1. Separation of difficult particulates | 274 |
| 6.1.1. Light and fluffy dust and particles with poor flowability | 274 |
| 6.1.2. Particles with strong adhesion | 275 |
| 6.1.3. Abrasive particles | 275 |
| 6.1.4. Hot particles | 276 |
| 6.1.5. Particles causing blinding of pores | 276 |
| 6.1.6. Nanoparticles with adverse gas properties | 276 |
| 6.1.7. Separation of mixture of solid and liquid particles | 277 |
| 6.1.8. The particles causing fire hazards/explosion | 277 |
| 6.2. Hybrid technology | 279 |
| 6.2.1. Electrostatically enhanced fabric filter | 280 |
| 6.2.2. Compact hybrid particulate collector | 282 |
| 6.2.3. Advanced hybrid particulate collector | 285 |
| 6.2.4. Multi-stage collector (MSC) | 286 |
| 7. Simultaneous controls of particles and gases | 288 |
| 7.1. Through sorbent injection | 288 |
| 7.2. Catalytic filter | 291 |
| 7.3. Using nonthermal plasma | 296 |

8. Conclusions

298
