CONTENTS

1. **Introduction** 1

2. **Mechanism and factors governing filtration** 2
   - 2.1. Mechanism of particle capture/emission 2
     - *2.1.1. Particle capturing based on single fiber theory* 3
     - *2.1.2. Mechanism governed by structure of filter material* 6
     - *2.1.3. Mechanism governed by mode of filtration* 8
       - *2.1.3.1. Direct penetration and seepage theory* 8
       - *2.1.3.2. Cake vs. non-dust cake filtration* 11
       - *2.1.3.3. Filtration/emission at different position of bag height* 13
       - *2.1.3.4. Filtration through electrostatic charging* 14
     - *2.1.4. Influence of filter unit design and operating parameters* 15
       - *2.1.4.1. Design of filter unit* 15
       - *2.1.4.2. Operating parameters* 18
   - 2.2. Mechanism of cleaning 19
     - *2.2.1. General* 19
     - *2.2.2. Role of venturi* 26
     - *2.2.3. Effect of pulse injection nozzle* 27
     - *2.2.4. Effect of compressed tank pressure and related factors* 30
     - *2.2.5. Dust-release behavior and patchy cleaning* 31
     - *2.2.6. Cleaning behavior at different positions of bag height* 32
     - *2.2.7. Role of filtration velocity* 34
     - *2.2.8. Role of dust/cake characteristics* 35
     - *2.2.9. Response of rigid filters* 36
   - 2.3. Mechanism governed by characteristics of aerosol 38
     - *2.3.1. Effect of temperature* 38
     - *2.3.2. Effect of moisture* 39
     - *2.3.3. Effect of particle type, size, and shape* 40
     - *2.3.4. Effect of dust density* 42

3. **Modeling and simulation** 42
   - 3.1. Modeling on emission 42
   - 3.2. On filter drag 43
   - 3.3. On cake growth 48
   - 3.4. On cake compaction 52
   - 3.5. Modeling media movement and cake detachment 55
   - 3.6. Steady state/unstable operation of jet-pulsed filters 58
   - 3.7. On system and filter media design 60
   - 3.8. Modeling on gas/solid reaction in filter cake 62

4. **Testing and evaluation** 64
   - 4.1. Performance parameters 64

4.2. Particulate solids 66
4.3. Characterization of dust layer/cake 72
4.4. Characterization of pore 74
4.4.1. Porosity 75
4.4.2. Pore dimensions 76
4.5. Fabric filtration performance 78

5. **Conclusions** 87
