A WILEY-INTERSCIENCE PUBLICATION  
**JOHN WILEY & SONS, New York · London · Sydney · Toronto**

# CONTENTS

---

## 1 GENERAL CONSIDERATIONS 1

Introduction, 1

Basic Converter Considerations, 2

*Digital Logic Levels*, 3

*Control Logic: The Status Output*, 6

*Control Logic: The Strobe*, 6

*Analog Signals*, 6

D/A Converters, 7

*Digital-to-Analog Conversion*, 7

*Basic Types of D/A Converters*, 8

Weighted-Resistor D/A Converters • R-2R D/A Converters • Other Types of D/A Converters

A/D Converters, 14

*Analog-to-Digital Conversion*, 14

*Basic Types of A/D Converters*, 15

Dual-Slope Integrating A/D Converters • Successive-Approximation A/D Converters • Other Types of A/D Converters

Application Factors, 22

*D/A Converter Specifications*, 22

*A/D Converter Specifications*, 25

*System Compatibility*, 27

*Converter Compatibility (Interchangeability)*, 29

*Cost*, 29

## 2 CONVERTER SPECIFICATIONS 31

Introduction, 31

Parameter Definitions, 33

- Accuracy, 36
  - Absolute Accuracy, 36
  - Relative Accuracy and Linearity, 37
- Acquisition Time, 40
- Aperture Time, 40
- Code Skipping/Code Elongation, 42
- Common-Mode Range, 44
- Common-Mode Rejection, 45
- Common-Mode Voltage, 46
- Conversion Time, 46
- Crosstalk, 47
- Crosstalk Attenuation, 47
- Decay Rate, 47
- Degitcher, 47
- Differential Gain, Phase, 48
- Differential Nonlinearity, 48
- Differential-Nonlinearity Temperature Coefficient, 48
- Droop Rate, 48
- Dual-Slope Converter, 48
- Feedthrough, 49
  - Feedthrough Capacitance/Channel (OFF Mode), 49
  - Feedthrough Rejection, 49
- Full-Power Bandwidth, 49
- Four-Quadrant Multiplying D/A Converter, 50
- Gain Accuracy, 50
- Gain Adjustment, 50
- Glitch, 51
- High-Frequency Roll-Off, 51
- Least Significant Bit (LSB), 53
- Linearity, 53
- Monotonicity, 53
- Most Significant Bit (MSB), 55
- Multiplexer Errors, 55
- Multiplying D/A Converter, 55
- Noise, 55
- Offset, 56
- Offset Drift, 57
- Output Offset Voltage, 57
- Power-Supply Sensitivity, 57
- Quantization Error, 57
- Relative Accuracy Error, 58
- Resolution, 58
- Sample-and-Hold Errors, 60
- Settling Time, 60
- Slew Rate, 62
- Small-Signal Bandwidth, 62
- Stability, 62
- Successive Approximations, 63

D/A Converter Specifications, 22  
 A/D Converter Specifications, 22  
 System Compatibility, 27  
 Converter Compatibility (Interchangeability), 29  
 Cor., 29  
 2 CONVERTER SPECIFICATIONS 31  
 Introduction, 31  
 Parameter Definitions, 33

*Switching Time*, 63  
*Temperature Coefficient*, 63  
     Gain TC, 64  
     Zero TC (Unipolar Converters), 64  
     Zero TC (Bipolar Converters), 64  
*Throughput Rate*, 65  
*Voltage Gain*, 65  
*Zero Setting*, 65

### 3 CONVERSION PROCESSES 66

Analog Variables, 66  
 Digital Variables, 67  
 Basic Conversion Relationships, 67  
 Conversion Codes, 72  
     *Unipolar Codes*, 72  
         The Binary Code, 72  
         The Binary-Coded-Decimal (BCD), 72  
         The 2-4-2-1 Binary-Coded Decimal, 76  
         The Gray Code, 77  
         Complementary Codes, 80  
         Analog Polarity, 80  
     *Bipolar Codes*, 81  
     Code Conversion, 84  
     Other Bipolar Codes, 84  
 Arbitrary Biasing and Scaling, 85

### 4 DIGITAL-TO-ANALOG CONVERTERS 88

D/A Conversion Techniques, 88  
     *Binary-Weighted Resistance D/A Converter*, 88  
     *Digital-to-Analog Converter Using a Ladder Network*, 90  
     *D/A Converter Components*, 95  
         Switches, 95  
         References, 134  
         Resistor Ladder Networks, 145  
     *Monolithic D/A Converters*, 150  
         Unipolar Conversion, 157  
         Bipolar Conversion, 157  
 Types of D/A Converters, 182  
     *Multiplying DAC*, 182  
     *Bipolar DAC*, 184  
     *Registers On DACs*, 186  
 Accuracy Considerations, 187  
     *Reference Error*, 188  
     *Ladder Error*, 189  
     *Amplifier Error*, 189  
 Application of D/A Converters, 189  
     *Data Distribution*, 189

- A 9 Bit Cmos D/A Converter*, 195
- Digital D/A Converters*, 197
- CRT (Cathode-Ray Tube) Displays*, 201
  - Raster Displays, 203
  - Dot-Matrix Displays, 203
  - Delay-Line Integrator, 206
- A/D Converters*, 207
- A No-Droop Sample-and-Hold Circuit*, 209
- Digital Filter*, 210
- Frequency Synthesizer*, 210
- Signal Generator*, 214
- Power Series Generation*, 215
- Ramp Waveform Generation*, 215
- Digitally Controlled Time Delay*, 217
- Semiconductor Memory Test System*, 220
- Constant-Current D/A Converter*, 222
- Digital-to-Shaft-Position Converter (Potentiometer)*, 228
- Time-Shared D/A Conversion*, 228
- Digital-to-Shaft-Position Conversion (Code Wheel Feedback)*, 230
- Liquid Flow Control*, 230
- Programmed Power Supplies*, 232
- Automobile Alternator Failure Indicator*, 234
- Other Applications*, 234
- Sources of Error in Digital-to-Analog Conversion, 238
- Deglitching Circuitry, 239

## **5 ANALOG-TO-DIGITAL CONVERTERS 243**

- Analog-to-Digital Conversion Techniques, 243
  - Types Of A/D Converters*, 245
    - Capacitor-charging A/D Converters, 245
    - Charge-balancing A/D Converter, 255
    - Discrete Voltage Comparison A/D Converters, 262
  - A/D Converter Components*, 276
    - Ladder Switches, 277
    - Switching Circuit Drivers, 295
    - Resistor Ladder Networks, 297
    - The Comparator, 297
  - Monolithic A/D Converters*, 304
  - Error Sources in A/D Converters*, 312
    - Definition of Error Source, 312
    - Errors in Pulse Width Modulator Converter, 313
    - Errors in the Dual-Slope Integrating A/D Converter, 316
    - Errors in a Successive Approximation A/D Converter, 317
    - Conversion Rate and Conversion Error, 317
  - Applications of A/D Converters*, 320
    - Electronic Weighing System, 321
    - Data Readout, 322
    - Automatic Digital Voltmeters, 324

Transient Signal Analyzer, 324
Cathode Conversion Technique, 326
Automatic Calibrator for Multichannel Signal-Conditioning System, 327
Calibration of the Remote Multiplexer, 329
Digital Micrometer, 331
Ratiometric Measurement, 331
Automatic Scale Zeroing, 332
Low Noise Communication, 333
Music Distribution Systems, 333
Monolithic two-Chip A/D Converter Applications, 335
Teletypewriter Interface, 341
Environmental Controller, 342
Data-Acquisition System, 343
Twelve-Bit A/D Converter Using Digital ICs, 346
Eleven-Bit Successive-Approximation A/D Converters, 346
Tracking A/D Converters, 346
Communications and Signal Analysis, 348
Time Compression by Sampling, 354
Real-Time Correlation, 354
Incremental Delay Line as a Filter, 355
Recursive Filtering, 355
Recording Studio Applications, 355
Automotive Diagnostic Test Systems, 358
Four-Channel Digitally Multiplexed Ramp A/D Converter, 360
Plasma TV Panel Display, 360
Function Generators, 362
Weather Buoy, 363
<i>Systems Interactions, 365</i>

## **6 SAMPLE-AND-HOLD CIRCUITS AND MULTIPLEXERS**

Sample-and-Hold Circuits, 369
<i>Introduction, 369</i>
<i>Basic Circuits, 369</i>
<i>Sample-and-Hold Accuracy, 374</i>
<i>Sample-and-Hold Stability, 376</i>
<i>Applications, 378</i>
IC Sample and Hold Circuit, 378
Freeze ADC Input, 380
Data Acquisition, 382
Data Distribution, 383
Peak Follower, 384
Time Sharing, 384
Tracking Sample/Hold, 384
Multiplexers, 386
<i>Analog Multiplexers, 386</i>
Analog Switches, 387
Basic Analog Multiplexer Configurations, 390

Digital Multiplexers, 398

*TTL MSI Multiplexers and Demultiplexers*, 426

The SN 74151 Multiplexer, 426

The SN 74150 16-Input Multiplexer, 428

The SN 74153 Dual 4-Input Multiplexer, 429

The 9309 Dual 4-Input Multiplexer, 430

The 9312/13 8-Input Multiplexers, 432

The 9322 Quad 2-Input Multiplexer, 434

The 8230/8231/8232 8-Bit Multiplexer, 436

The DM 7210 and the SN 7442 Multiplexer/Demultiplexer

Combination, 441

The DM 7210 MSI Multiplexer, 441

A 7442 MSI Decoder-Demultiplexer, 441

*TTL Multiplexer Applications*, 448

Data Routing, 448

Synchronous Data System, 451

Synchronous Digital Data-Transmission System, 453

Multiple Word Data Bussing, 454

Multiplexing Analog Data, 454

Keyboard Entry Decoder, 457

*TRI-STATE Logic (TSL) Multiplexers*, 460
