

# Handbook of Energy Conservation for Mechanical Systems in Buildings

Compiled and Edited by

**Robert W. Roose, P.E.**

Senior Editor

*Heating/Piping/Air Conditioning*

Chicago, Illinois

A compilation of articles and information published previously in *Heating/Piping/Air Conditioning*, the Penton/IPC magazine for mechanical systems engineering and energy management.

# Contents

Introduction / v

Acknowledgments / ix

## Section I THE NEED FOR ENERGY CONSERVATION / 1

1. The Energy Science, T. E. Pannoke / 3
2. Education: The Key to the Energy Dilemma, William J. Coad / 10
3. What is Energy? William J. Coad / 12
4. Energy Transportation, William J. Coad / 14
5. Energy Economics: a Needed Science, William J. Coad / 16
6. More on the Energy Hypothesis, William J. Coad / 18
7. An Energy Outlook, A. A. Field / 21
8. Energy: Crisis and Conservation, A. A. Field / 27
9. The Energy Intensity of Building Materials, Robert A. Kegel / 33
10. Energy Conservation and HVAC, E. R. Ambrose / 41
11. Energy Effectiveness Factor, William J. Coad / 43

## Section II PLANNING FOR ENERGY CONSERVATION / 51

12. How to Develop and Implement an Energy Conservation Program, John S. Blossom / 53
13. The Computer as a Tool for Energy Analysis, William J. Coad / 61
14. Flexible Approach to Computerized HVAC System Analysis, Milton Meckler / 68
15. Architectural Aspects of Energy Conservation in HVAC, E. R. Ambrose / 77
16. Thermal Insulation and Double Glazing, E. R. Ambrose / 80
17. Will Less Glass Save More Energy? Parambir S. Gujral / 84
18. Excessive Infiltration and Ventilation Air Wastes Energy, E. R. Ambrose / 90

## Section III DESIGNING THE SYSTEMS FOR ENERGY CONSERVATION / 95

19. Energy Conservation: Why Not Go All the Way? T. E. Pannoke / 97
20. Design Parameters, William J. Coad / 102
21. How Energy Conservation is Achieved by Applying Integrated Building and System Design, Paul K. Schoenberger / 104
22. Thermal Effectiveness of a Vapor Compression Cycle, William J. Coad / 111
23. Picking an Energy Source and Conversion System, William J. Coad / 114
24. The Computer and HVAC System Design, William J. Coad / 116
25. Integrated Loop System for Campus Cooling, William J. Coad / 118
26. Energy Economics: A Design Parameter, William J. Coad / 131
27. Heat Reclaiming Systems, E. R. Ambrose / 139
28. Heat Recovery Devices for Air Conditioning, Richard K. Fergin / 146
29. Air-to-Air Energy Recovery, T. E. Pannoke / 151
30. A Winning Combination: Heat Recovery and Evaporative Cooling, Richard K. Fergin / 167
31. Thermal Insulation Guide for Ducts, Equipment, and Piping, Robert W. Roose / 172
32. Economic Thickness for Thermal Piping Insulation Above Ground, Robert J. Curt / 184

33. Thermal Insulation for Buried Piping, Robert W. Roose and T. E. Pannkoke / 196
34. Energy Saving Warehouse/Office Design, James Ross / 208
35. Heat Energy from Waste Incineration: Cash for Trash, Maurice J. Wilson / 214
36. GSA's Systems Design and Performance Approach to Energy Conservation, Robert R. Ramsey and Sheri Hronek / 223
37. Life-cycle Costing, William J. Coad / 232

**Section IV CONTROL AND SYSTEM ADJUSTMENTS FOR ENERGY CONSERVATION / 235**

38. Application and Adjustment of Controls for Energy Economy, Robert W. Flanagan / 237
39. Readjusting and Rebalancing Air and Water Systems for Energy Savings, Guy W. Gupton, Jr. / 251
40. System Tuning, William J. Coad / 257

**Section V OPERATION AND MAINTENANCE OF SYSTEMS FOR ENERGY CONSERVATION / 261**

41. Planned versus Breakdown Maintenance, William J. Coad / 263
42. Scheduling and Optimizing Equipment Operation and Building Use, Charles F. Sepsy and Robert H. Fuller / 265
43. Equipment Maintenance for Energy Conservation, Kenneth LeBrun / 276
44. Maintenance and Service for HVAC and Energy Conservation, E. R. Ambrose / 287

**Section VI REPLACEMENT, MODERNIZATION, AND UPGRADING SYSTEMS FOR ENERGY CONSERVATION / 291**

45. Commercial and Institutional Buildings: Replacement, Modernization, Upgrading, Maurice G. Gamze / 293
46. Replacement, Modernization, and Upgrading Existing Industrial Plants, O. F. Smith, Jr. / 303
47. Energy Saving Techniques for Existing Buildings, Paul K. Schoenberger / 308
48. Upgrading System Performance in Existing Installations, E. R. Ambrose / 320
49. Retrofitting and Replacing Energy Intensive Rooftops, Robert T. Korte / 325

**Section VII PROVEN WAYS TO SAVE ENERGY / 337**

50. HVAC Design Guidelines Prove Conservation of Energy, Paul K. Schoenberger / 339
51. Pump Energy Savings for Hydronic Systems, G. F. Carlson / 345
52. Proven Ways to Save Energy in Commercial Buildings, Thomas Imperatore / 359
53. Energy Conservation in Commercial Buildings, Richard R. Stubblefield / 368
54. Proven Ways to Save Energy in Institutional Buildings, Robert A. Kegel / 378
55. Proven Ways to Save Energy in Industrial Plants, K. E. Robinson / 384
56. Saving Air and Energy in Industrial Plants, George M. Hama / 391
57. Nomograph Estimates Air Infiltration due to Stack Effect, F. Caplan / 401
58. Nomograph Estimates Air Infiltration, Heat Removal, F. Caplan / 403
59. Industrial Ventilation Techniques for Energy Conservation, Douglas L. Gunnell / 406

**Section VIII JUDGING THE RESULTS OF AN ENERGY CONSERVATION PROGRAM / 413**

60. Judging the Results by Checking Utility Bills before and after Implementing an Energy Conservation Program is not Enough to Prove Success, Charles J. R. McClure / 415
61. Energy Conservation Through Value Engineering, Howard McKew / 424
62. Efficient Systems for after Hours Office Cooling, Albert I. Cho and Ashraf Ali / 431
63. The Impact of ASHRAE Standard 90-75 on High Rise Office Building Energy and Economics, N. R. Patterson and James B. Alwin / 436
64. Enthalpy Control Systems: Increased Energy Conservation, Gideon Shavit / 449
65. How to Achieve Energy Savings in Chiller Plant Operations with Series and Parallel Flow Through Air Conditioning Chillers, Paul K. Schoenberger / 461

66. Two Phase Booster Ejector for Air Conditioning and Refrigeration Cycles, Ancel L. Lee / 468

**Section IX FUTURE OPPORTUNITIES & LIMITATIONS / 475**

67. How New Technology May Save Energy in Existing Buildings, Frank H. Bridgers / 477  
68. The Prospects for Solar Energy Since 1967, John I. Yellott / 487  
69. Solar Energy Overview, John I. Yellott / 498  
70. Solar Gain Control, Gideon Shavit / 510  
71. Solar Energy in Europe, A. A. Field / 521  
72. How the Heat Pump Conserves Energy Resources, T. E. Pannkoke / 527  
73. Solar Heat Pump Integrated Heat Recovery, Boggarm S. V. Setty / 534  
74. Solar Energy Caps Unique System, William E. Fenner / 540  
75. Solar System Employs Total Heat Concept, Richard R. Stubblefield / 544  
76. Geothermal Energy Rediscovered, A. A. Field / 548  
77. Geothermal Energy Heats Campus, James Hitt / 553  
78. A Critical Look at Total Energy Systems and Equipment, Maurice G. Gamze / 560  
79. Government Regulations and Activities Directed Toward Energy Conservation For Buildings, Paul R. Achenbach / 568

**Section X SUMMARY / 579**

- 133 Ways to Save Energy in New and Existing Buildings / 581

**INDEX / 585**
