# GUIDE TO PARTS

**Part 1 — Materials**  
1-1 to 1-8

**Part 2 — Product Information and Capability**  
2-1 to 2-56

**Part 3 — Analysis and Design of Precast,  
Prestressed Concrete Structures**  
3-1 to 3-75

**Part 4 — Design of Precast and Prestressed  
Concrete Components**  
4-1 to 4-75

**Part 5 — Product Handling and Erection Bracing**  
5-1 to 5-36

**Part 6 — Design of Connections**  
6-1 to 6-69

**Part 7 — Special Topics for Architectural Precast Concrete**  
7-1 to 7-30

**Part 8 — Tolerances for Precast and Prestressed Concrete**  
8-1 to 8-19

**Part 9 — Thermal, Acoustical, Fire and  
Other Considerations**  
9-1 to 9-76

**Part 10 — Specifications and Standard Practices**  
10-1 to 10-36

**Part 11 — General Design Information**  
11-1 to 11-30

**Index**

# PART I MATERIALS

	Page No.
1.1 Concrete.....	1-2
1.1.1 Compressive Strength.....	1-2
1.1.2 Tensile Strength.....	1-3
1.1.3 Shear Strength.....	1-3
1.1.4 Modulus of Elasticity.....	1-3
1.1.5 Poisson's Ratio.....	1-3
1.1.6 Volume Changes.....	1-3
1.1.7 Freeze-Thaw and Chemical Resistance.....	1-4
1.2 Reinforcement.....	1-5
1.2.1 Prestressing Tendons.....	1-5
1.2.2 Deformed Reinforcing Bars.....	1-5
1.2.3 Welded Wire Fabric.....	1-5
1.2.4 Protection of Reinforcement.....	1-6
1.3 Grout, Mortar and Drypack.....	1-7
1.3.1 Sand-Cement Mixtures.....	1-7
1.3.2 Non-Shrink Grout.....	1-8
1.3.3 Epoxy Grouts.....	1-8
1.4 References.....	1-8

# PART 2

## PRODUCT INFORMATION AND CAPABILITY

	Page No.
2.1 General .....	2-2
2.1.1 Notation .....	2-2
2.1.2 Introduction .....	2-3
2.2 Explanation of Load Tables .....	2-3
2.2.1 Safe Superimposed Load .....	2-3
2.2.2 Limiting Criteria .....	2-3
2.2.3 Estimated Cambers .....	2-4
2.2.4 Design Criteria .....	2-4
2.2.5 Concrete Strengths and Unit Weights .....	2-4
2.2.6 Prestressing Strands .....	2-4
2.2.7 Losses .....	2-5
2.2.8 Strand Placement .....	2-5
2.2.9 Columns and Load Bearing Wall Panels .....	2-5
2.2.10 Piles .....	2-5
2.3 Stemmed Deck Members	
Double tee load tables .....	2-6
Single tee load tables .....	2-25
2.4 Flat Deck Members	
Hollow-core slab load tables .....	2-29
Hollow-core slab section properties .....	2-35
Solid slab load tables .....	2-38
2.5 Beam Load Tables	
Rectangular beams .....	2-44
L-shaped beams .....	2-45
Inverted tee beams .....	2-46
2.6 Columns and Load Bearing Wall Panels	
Precast, prestressed columns .....	2-47
Precast, reinforced columns .....	2-49
Double tee wall panels .....	2-51
Hollow-core wall panels .....	2-52
Solid wall panels .....	2-53
2.7 Piles	
Piles .....	2-55
Sheet piles .....	2-56

# PART 3

## ANALYSIS AND DESIGN OF PRECAST, PRESTRESSED CONCRETE STRUCTURES

	Page No.
3.1 General .....	3-3
3.1.1 Notation .....	3-3
3.1.2 Introduction .....	3-4
3.2 Preliminary Analysis .....	3-4
3.2.1 Framing Dimensions .....	3-5
3.2.2 Span to Depth Ratios .....	3-5
3.2.3 Lateral Load Resisting Systems .....	3-5
3.2.4 Control of Volume Change Deformations and Restraint Forces .....	3-5
3.2.5 Connection Concepts .....	3-6
3.3 Volume Changes .....	3-6
3.3.1 Axial Volume Change Strains .....	3-6
3.3.2 Thermal Bowing .....	3-11
3.3.3 Expansion Joints .....	3-14
3.4 Component Analysis .....	3-16
3.4.1 Non-Bearing Wall Panels .....	3-16
3.4.2 Load Bearing Wall Panels .....	3-17
3.4.3 Non-Bearing Spandrels .....	3-18
3.4.4 Load Bearing Spandrels .....	3-19
3.4.5 Eccentrically Loaded Columns .....	3-20
3.5 Slenderness Effects in Columns and Wall Panels .....	3-22
3.5.1 Second-Order (P- $\Delta$ ) Analysis .....	3-22
3.5.2 Moment Magnification Method .....	3-23
3.6 Diaphragm Design .....	3-27
3.6.1 Method of Analysis .....	3-27
3.6.2 Shear Transfer between Members .....	3-27
3.6.3 Chord Forces .....	3-29
3.7 Shear Wall Buildings .....	3-29
3.7.1 General .....	3-29
3.7.2 Rigidity of Solid Shear Walls .....	3-30
3.7.3 Distribution of Lateral Loads .....	3-31
3.7.4 Unsymmetrical Shear Walls .....	3-31
3.7.5 Coupled Shear Walls .....	3-32
3.7.6 Shear Walls with Large Openings .....	3-33
3.7.7 Architectural Panels as Shear Walls .....	3-42

3.8	Buildings with Moment-Resisting Frames .....	3-43
3.8.1	General .....	3-43
3.8.2	Moment Resistance of Column Bases.....	3-43
3.8.3	Fixity of Column Bases.....	3-47
3.8.4	Modeling Partially Fixed Bases.....	3-48
3.8.5	Volume Change Effects in Moment-Resisting Frames .....	3-48
3.8.6	Computer Models for Frame Analyses.....	3-55
3.9	Shear Wall-Frame Interaction .....	3-55
3.10	Earthquake Analysis .....	3-56
3.10.1	Notation.....	3-56
3.10.2	General.....	3-57
3.10.3	Building Code Requirements.....	3-57
3.10.4	Design Guidelines for Wall Panels .....	3-58
3.10.5	Concept of Box-Type Buildings.....	3-59
3.10.6	Structural Layout and Connections .....	3-59
3.10.7	Example – One-Story Building.....	3-60
3.10.8	Example – 4-Story Building .....	3-65
3.10.9	Example – 12-Story Building.....	3-72
3.10.10	Example – 23-Story Building .....	3-72
3.11	References .....	3-74

# PART 4

## DESIGN OF PRECAST AND PRESTRESSED CONCRETE COMPONENTS

	Page No.
4.1 General .....	4-3
4.1.1 Notation .....	4-3
4.1.2 Introduction .....	4-6
4.2 Flexure.....	4-6
4.2.1 Strength Design .....	4-6
4.2.2 Service Load .....	4-14
4.2.2.1 Non-Prestressed Element Design .....	4-14
4.2.2.2 Prestressed Element Design .....	4-16
4.2.3 Prestress Transfer and Strand Development .....	4-20
4.3 Shear.....	4-20
4.3.1 Shear Resistance of Non-Prestressed Concrete .....	4-21
4.3.2 Shear Resistance of Prestressed Concrete Members.....	4-21
4.3.3 Design Using Design Aids .....	4-23
4.3.4 Shear Reinforcement .....	4-26
4.3.5 Horizontal Shear Transfer in Composite Members .....	4-27
4.4 Torsion .....	4-29
4.4.1 Combined Shear and Torsion Strength — Non-Prestressed Members .....	4-29
4.4.2 Torsion with Shear and Flexure — Prestressed Members...	4-31
4.5 Loss of Prestress .....	4-39
4.5.1 Sources of Stress Loss .....	4-39
4.5.2 Range of Values for Total Losses .....	4-39
4.5.3 Estimating Prestress Losses .....	4-40
4.5.4 Critical Locations .....	4-40
4.6 Camber and Deflection .....	4-42
4.6.1 Initial Camber.....	4-43
4.6.2 Elastic Deflections .....	4-44
4.6.3 Bilinear Behavior .....	4-44
4.6.4 Effective Moment of Inertia .....	4-45
4.6.5 Long-Time Camber/Deflection .....	4-46
4.7 Compression Members.....	4-47
4.7.1 Strength Design of Precast Concrete Compression Members.....	4-47
4.7.2 Slenderness Effects .....	4-52
4.7.3 Service Load Stresses .....	4-52
4.7.4 Effective Width of Wall Panels.....	4-52
4.7.5 Varying Section Properties of Compression Members.....	4-52
4.7.6 Piles .....	4-54

4.8 Special Considerations .....	4-57
4.8.1 Load Distribution .....	4-57
4.8.2 Effect of Openings .....	4-58
4.8.3 Continuity .....	4-58
4.8.4 Cantilevers .....	4-58
4.8.5 Composite Topping with Hollow-Core Slabs .....	4-59
4.9 References .....	4-60
4.10 Design Aids .....	4-61
Flexure .....	4-61
Shear .....	4-65
Camber and Deflection .....	4-73

# PART 5

## PRODUCT HANDLING AND ERECTION BRACING

	Page No.
5.1 Notation .....	5-2
5.2 Product Handling.....	5-2
5.2.1 Introduction .....	5-2
5.2.2 Structural Design Criteria.....	5-3
5.2.3 Form Suction and Impact Factors .....	5-3
5.2.4 Stress Limitations .....	5-3
5.2.5 Safety Factors .....	5-5
5.2.6 Prestressed Wall Panels .....	5-5
5.2.7 Handling Considerations.....	5-6
5.2.8 Handling Devices .....	5-10
5.2.9 Lateral Stability .....	5-14
5.2.10 Storage.....	5-16
5.2.11 Transportation .....	5-17
5.2.12 Erection .....	5-19
5.2.13 Design Example - Flat Panel .....	5-19
5.3 Erection Bracing.....	5-25
5.3.1 Introduction .....	5-25
5.3.2 Loads.....	5-27
5.3.3 Factors of Safety.....	5-27
5.3.4 Bracing Equipment and Materials .....	5-27
5.3.5 Examples .....	5-29
5.4 References .....	5-36

# PART 6

## DESIGN OF CONNECTIONS

	Page No.
6.1 Notation .....	6-2
6.2 General .....	6-3
6.3 Loads and Load Factors .....	6-3
6.4 Connection Design Criteria .....	6-3
6.5 Connection Hardware and Load Transfer Devices .....	6-4
6.5.1 Reinforcing Bars .....	6-4
6.5.2 Welded Headed Studs .....	6-6
6.5.3 Deformed Bar Anchors .....	6-10
6.5.4 Bolts and Threaded Connectors .....	6-10
6.5.5 Inserts Cast in Concrete .....	6-10
6.5.6 Structural Steel .....	6-11
6.5.7 Post-Tensioning Steel .....	6-14
6.5.8 Bearing Pads .....	6-14
6.5.9 Connection Angles .....	6-17
6.6 Friction .....	6-18
6.7 Shear-Friction .....	6-18
6.8 Bearing on Plain Concrete .....	6-19
6.9 Reinforced Concrete Bearing .....	6-20
6.10 Column Base Plates .....	6-21
6.11 Concrete Brackets or Corbels .....	6-23
6.12 Structural Steel Haunches .....	6-25
6.13 Dapped-End Connections .....	6-28
6.13.1 Flexure and Axial Tension in the Extended End .....	6-28
6.13.2 Direct Shear .....	6-28
6.13.3 Diagonal Tension at Reentrant Corner .....	6-30
6.13.4 Diagonal Tension in the Extended End .....	6-30
6.13.5 Anchorage of Reinforcement .....	6-30
6.13.6 Detailing Considerations .....	6-30
6.13.7 Alternate Placement of Reinforcement .....	6-30
6.14 Beam Ledges .....	6-33
6.15 Hanger Connections .....	6-34
6.15.1 Cast-in Hanger .....	6-34
6.15.2 Loop Hanger .....	6-36
6.16 Moment Connections .....	6-38
6.17 Connection of Non-Load Bearing Wall Panels .....	6-38
6.18 Connection of Load Bearing Wall Panels .....	6-39
6.18.1 Vertical Joints .....	6-39
6.18.2 Horizontal Joints .....	6-41
6.18.3 Structural Integrity .....	6-43
6.18.4 Typical Details .....	6-43
6.19 References .....	6-43
6.20 Design Aids .....	6-48

# PART 7

## SPECIAL TOPICS FOR

### ARCHITECTURAL PRECAST CONCRETE

	Page No.
7.1 Introduction.....	7-2
7.1.1 Structural Design and Analysis.....	7-2
7.1.2 Load Transfer—General Methods.....	7-3
7.1.3 Application.....	7-3
7.1.4 Design Analysis.....	7-3
7.1.5 Design Objectives.....	7-4
7.2 Connections of Non-Load Bearing Panels.....	7-4
7.2.1 Design Fundamentals.....	7-4
7.2.2 Connection Details.....	7-6
7.3 Precast Concrete Used as Forms.....	7-14
7.3.1 General.....	7-14
7.3.2 Design Considerations.....	7-14
7.3.3 Construction Considerations.....	7-15
7.4 Column Covers and Mullions.....	7-18
7.5 Veneered Panels.....	7-19
7.5.1 General.....	7-19
7.5.2 Structural Clay Products.....	7-21
7.5.3 Natural Stone.....	7-22
7.6 Design Example—Window Wall Panel.....	7-26
7.7 References.....	7-30

# PART 8

## TOLERANCES FOR PRECAST AND PRESTRESSED CONCRETE

	Page No.
8.1 General.....	8-2
8.1.1 Definitions.....	8-2
8.1.2 Purpose.....	8-2
8.1.3 Responsibility.....	8-2
8.1.4 Tolerance Acceptability Range.....	8-3
8.1.5 Relationships between Different Tolerances.....	8-3
8.2 Product Tolerances.....	8-3
8.2.1 General.....	8-3
8.2.2 Overall Dimensions.....	8-3
8.2.3 Sweep or Horizontal Alignment.....	8-3
8.2.4 Position of Tendons.....	8-4
8.2.5 Camber and Differential Camber.....	8-4
8.2.6 Weld Plates.....	8-4
8.2.7 Haunches of Columns and Wall Panels.....	8-5
8.2.8 Warping and Bowing.....	8-5
8.2.9 Smoothness.....	8-6
8.2.10 Architectural vs. Structural Walls.....	8-6
8.3 Erection Tolerances.....	8-7
8.3.1 General.....	8-7
8.3.2 Recommended Erection Tolerances.....	8-7
8.3.3 Mixed Building Systems.....	8-7
8.3.4 Connections and Bearing.....	8-7
8.4 Clearances.....	8-7
8.4.1 General.....	8-7
8.4.2 Joint Clearance.....	8-13
8.4.3 Procedure for Determining Clearance.....	8-13
8.4.4 Clearance Examples.....	8-13
8.5 Interfacing Tolerances.....	8-17
8.5.1 General.....	8-17
8.5.2 Interface Design Approach.....	8-17
8.5.3 Characteristics of the Interface.....	8-17
8.6 References.....	8-19

# **PART 9**

## **THERMAL, ACOUSTICAL, FIRE, AND OTHER CONSIDERATIONS**

	Page No.
9.1 Thermal Properties of Precast Concrete.....	9-2
9.2 Acoustical Properties of Precast Concrete .....	9-23
9.3 Fire Resistance .....	9-36
9.4 Sandwich Panels .....	9-55
9.5 Corrosive Environments.....	9-62
9.6 Quality Control .....	9-63
9.7 Concrete Coatings and Joint Sealants .....	9-64
9.8 Vibration in Concrete Structures .....	9-65
9.9 Cracking, Repair and Maintenance .....	9-67
9.10 Precast Segmental Construction .....	9-68
9.11 Coordination with Mechanical, Electrical and Other Sub-Systems .....	9-70

# PART 10

## SPECIFICATIONS AND STANDARD PRACTICES

	Page No.
10.1 Guide Specification for Precast, Prestressed Concrete .....	10-2
10.2 Guide Specification for Architectural Precast Concrete .....	10-11
10.3 Code of Standard Practice for Precast Concrete .....	10-26
10.4 Inspection Checklist for Architectural Precast Concrete .....	10-36

# PART 11

## GENERAL DESIGN INFORMATION

	Page No.
11.1 Design Information .....	11-2
11.1.1 Dead weights of floors, ceilings, roofs, and walls .....	11-2
11.1.2 Recommended minimum floor live loads .....	11-3
11.1.3 Beam design equations and diagrams .....	11-4
11.1.4 Camber (deflection) and rotation coefficients for prestress force and loads .....	11-12
11.1.5 Moments in beams with fixed ends .....	11-13
11.1.6 Moving load placement for maximum moment and shear .....	11-14
11.2 Material Properties .....	11-15
11.2.1 Table of concrete stresses .....	11-15
11.2.2 Concrete modulus of elasticity as affected by unit weight and strength .....	11-15
11.2.3 Properties and design strengths of prestressing strand and wire .....	11-16
11.2.4 Properties and design strengths of prestressing bars .....	11-17
11.2.5 Typical stress-strain curve, 7-wire stress-relieved and low-relaxation prestressing strand .....	11-18
11.2.6 Reinforcing bar data .....	11-19
11.2.7 Required development and lap lengths for Grade 60 bars .....	11-20
11.2.8 Required embedment lengths for standard end hooks on Grade 60 bars .....	11-21
11.2.9 Common stock styles of welded wire fabric .....	11-22
11.2.10 Special welded wire fabric for double tee flanges .....	11-23
11.2.11 Wires used in welded wire fabric .....	11-23
11.3 Section Properties .....	11-24
11.3.1 Properties of geometric sections .....	11-24
11.3.2 Coefficients for determining section properties of T-beams .....	11-27
11.4 Metric Conversion .....	11-29
