WATER TREATMENT HANDBOOK

FIFTH EDITION

14 SET 1982

A HALSTED PRESS BOOK
JOHN WILEY & SONS

New York - Chichester - Brisbane - Toronto

1979

TABLE OF CONTENTS

When read in conjunction with the 1978 French version of this Handbook, entitled « Mémento Technique de l'Eau » or with the 1979 Spanish version, entitled « Manual Técnico del Agua », this English version can be used as an English-French or English-Spanish glossary of water treatment terms. Except for Chapter 34 dealing with legislation, the pagination is identical in all three language versions.

Presentation

V

Part One : General Aspects of Water and Water Treatment 1

CHAPTER 1. — WATER: PHYSICS, CHEMISTRY, BIOLOGY.....	3
1. Water and its physical characteristics.....	4
1.1. The water molecule.....	4
1.2. The three states.....	5
1.3. Physical properties.....	5
2. Water and chemistry.....	7
2.1. Water as a solvent.....	7
2.1.1. Solubility of the various phases.....	8
2.1.2. Hydrophilization.....	9
2.1.3. True solutions.....	10
2.1.4. Ionization.....	11
2.2. Oxidation-reduction.....	14
3. Water and biology.....	15
3.1. Water and cellular metabolism.....	15
3.2. Water: the medium for microbic life.....	17
3.3. Nutritive substances.....	19
CHAPTER 2. — ACTION OF WATER ON MATERIALS.....	21
1. Electrochemical mechanism of the corrosion of iron.....	21
1.1. Electrochemical processes.....	21
1.2. Corrosion in a deaerated medium or corrosion by hydrogen.....	23
1.3. Corrosion by oxygen.....	25
1.3.1. Electrochemical mechanism.....	25
1.3.2. Differential oxygen concentration.....	26
2. Action of carbon dioxide.....	27

2.1. CaO/CO ₂ equilibrium—Aggressive action on CaCO ₃	27
2.2. General study of equilibrium.....	28
2.3. Graphic representations.....	29
2.3.1. TILLMANS method.....	29
2.3.2. LANGELIER method and HOOVER diagram.....	29
2.3.3. HALLOPEAU method.....	30
2.3.4. FRANQUIN & MARECAUX diagram.....	30
2.3.5. LEGRAND AND POIRIER method.....	30
3. Formation of protective films and passivation.....	31
3.1. Spontaneous formation of protective films.....	31
3.1.1. Influence of the calcic alkalinity of the water.....	31
3.1.2. Magnetite film.....	32
3.2. Inhibition and passivation.....	33
3.3. Principles of protection against corrosion.....	33
3.4. Cathodic protection.....	34
4. Secondary factors in corrosion.....	35
4.1. Influence of mineral content (sulphates, etc.).....	35
4.2. Influence of temperature on aerated water.....	37
4.3. Influence of microorganisms.....	38
4.4. Influence of the surface condition and cleanness of the water.....	39
4.5. Influence of pH.....	40
4.6. Damage due to flow velocity.....	40
5. Corrosion of stainless steels.....	41
5.1. Definitions.....	41
5.2. Corrosion of stainless steels in a liquid medium.....	42
5.3. Various forms of corrosion of stainless steel.....	43
5.3.1. General corrosion.....	43
5.3.2. Intergranular corrosion.....	43
5.3.3. Pitting.....	43
5.3.4. Cavity corrosion.....	44
5.3.5. Stress corrosion.....	44
5.3.6. Special types of corrosion.....	45
5.4. Use of stainless steel.....	45
5.5. Choice of a stainless steel.....	46
6. Degradation of concrete.....	47
6.1. Mechanical causes.....	47
6.2. Chemical causes.....	48
7. Corrosion of non-ferrous metals.....	51
7.1. Aluminium.....	51
7.2. Copper.....	52
7.3. Lead.....	52
7.4. Galvanized steel.....	52
7.5. Brass.....	53
8. Action of sea water.....	54

8.1. Corrosiveness and formation of scale.....	54
8.2. Protection against formation of scale.....	54
8.3. Protection against corrosion.....	54
8.3.1. Structural measures.....	54
8.3.2. Continuing measures.....	55
8.4. Protection against organic fouling.....	55
CHAPTER 3. — THEORY OF THE MAIN TREATMENT PROCESSES....	57
1. Physico-chemical processes.....	57
1.1. Removal of suspended solids and colloids.....	57
1.1.1. General remarks.....	57
1.1.2. Coagulation and flocculation.....	61
1.1.3. Settling and clarification.....	65
A. Settling of granular particles.....	65
B. Flocculant settling.....	68
C. Zone settling of flocculated particles.....	69
D. General design principles for settling tanks and clarifiers....	71
E. Settling tank and clarifier construction.....	73
F. Plate-type settling tanks and clarifiers.....	74
1.1.4. Flotation.....	76
1.1.5. Filtration.....	78
A. Surface filtration.....	78
B. Filtration through a thick medium.....	79
C. Filtration in depth.....	80
1.2. Removal of dissolved matter.....	82
1.2.1. Separation by membranes.....	82
A. Semi-permeable membranes.....	82
B. Dialysis membranes.....	86
1.2.2. Adsorption.....	86
1.2.3. Ion exchange.....	87
A. Examination of the basic ion exchange reaction.....	87
B. Methods of regeneration.....	91
1.3. Liquid-liquid separation.....	92
1.4. Chemical processes.....	93
1.4.1. Precipitation.....	93
1.4.2. Neutralization.....	94
1.4.3. Oxidation and reduction.....	95
2. Biological processes.....	96
2.1. Growth of a bacterial culture.....	97
2.2. Evaluation of organic pollution.....	98
2.3. Aerobic treatment.....	100
2.4. Anaerobic treatment: digestion.....	105
2.5. Bacterial oxidation-reduction.....	106

<i>Part Two : Treatment Plant and Processes</i>	109
<hr/>	
CHAPTER 4. — PRELIMINARY TREATMENT.....	111
1. Screening	111
1.1. Various types of bar screens.....	112
1.2. Automatic control and protection of mechanical screens.....	115
1.3. Flow rates and head loss. Clogging.....	116
2. Comminution	117
3. Grit removal.....	123
4. Desilting	123
5. Oil and grease removal.....	124
6. Fine straining.....	129
7. Extraction and treatment of grit and trash from waste water	132
CHAPTER 5. — COAGULATION AND FLOCCULATION IN WATER TREATMENT	135
1. General information.....	135
2. Coagulation	136
2.1. Main coagulants.....	136
2.1.1. Aluminium salts.....	136
2.1.2. Iron salts.....	137
2.1.3. Other coagulants.....	138
2.2. Coagulation procedure.....	139
3. Flocculation	141
3.1. Flocculating agents.....	141
3.1.1. Activated silica.....	141
3.1.2. Other inorganic flocculation aids.....	142
3.1.3. Organic flocculation aids.....	142
3.2. Flocculation procedure.....	144
CHAPTER 6. — CHEMICAL PRECIPITATION.....	147
1. Principles of precipitation processes.....	147
1.1. Elimination of calcium and magnesium.....	147
1.1.1. Principal methods.....	147
a) Carbonate removal by lime.....	147
b) Use of sodium carbonate.....	149
c) Precipitation with caustic soda.....	149
1.1.2. Basic data for calculation and monitoring of precipitation.....	149
1.2. Silica elimination.....	151
1.3. Elimination of salts from metal finishing effluents.....	152
1.4. Treatment of brines.....	152
1.5. Precipitation of metallic hydroxides.....	154
2. Precipitation equipment.....	154

2.1. Cold-process precipitation of calcium and magnesium.....	154
2.1.1. Sludge recirculation units.....	155
2.1.2. Sludge blanket units.....	155
2.1.3. Granular contact units.....	155
2.2. Equipment for hot-process carbonate and silica removal—the Ther- mo-Circulator.....	157
CHAPTER 7. — SETTLING AND FLOTATION.....	159
1. Principal types of settling.....	159
1.1. Static settling.....	159
1.2. Sludge contact clarification.....	160
1.3. Application of plate settling to sludge contact clarifiers.....	161
1.4. Super-accelerated clarification.....	163
2. Settling tanks.....	163
2.1. Static settling tanks.....	164
2.1.1. Static settling tanks without scraping systems.....	164
a) Ordinary cylindrical settling tanks with conical bottoms... ..	164
b) Horizontal-flow static settling tanks.....	165
c) Plate-type static settling tanks.....	165
2.1.2. Static settling tanks with mechanical sludge scrapers.....	166
a) Circular settling tanks.....	166
b) Longitudinal rectangular settling tanks.....	169
2.1.3. Static settling tanks with sludge suction.....	170
2.2. Sludge contact settling tanks.....	172
2.2.1. General remarks.....	172
2.2.2. Settling tanks with sludge recirculation.....	174
a) The Circulator clarifier.....	174
b) The Turbocirculator clarifier.....	175
c) The Accelator clarifier.....	176
d) The RPS plate settling tank.....	177
2.2.3. Sludge blanket clarifiers.....	178
a) Behaviour of a sludge blanket.....	178
b) The Pulsator clarifier.....	179
c) The plate-type Pulsator clarifier.....	181
d) The Superpulsator.....	182
2.3. Ancillary equipment for settling tanks.....	184
2.3.1. Sludge removal arrangements.....	184
2.3.2. Scrapers for sludge and surface scum.....	186
3. Flotation.....	188
3.1. Principal flotation systems.....	188
3.1.1. Spontaneous flotation.....	189
3.1.2. Mechanical flotation.....	190
3.1.3. Flotation using blown air.....	190
3.1.4. Flotation using dissolved air.....	191

4. Flotation units.....	196
4.1. General technology.....	196
4.2. The Flotazur B.....	199
4.3. The Sediflotazur.....	200
4.4. The Sediflotor.....	201
4.5. The Flotazur R.....	201
CHAPTER 8. — AEROBIC BIOLOGICAL PROCESSES.....	203
1. Biological filters.....	203
1.1. Theoretical considerations.....	204
1.2. Conventional-media biological filters.....	205
1.3. Plastic-filled biological filters.....	208
1.4. Specific problems.....	210
2. Activated sludge.....	211
2.1. Plant loading.....	212
2.2. The main activated sludge treatment systems.....	214
2.2.1. Separate-tank systems.....	214
2.2.2. The Oxyrapid.....	216
2.2.3. The Aero-Accelator.....	219
2.2.4. Function of the final clarifier.....	220
2.3. Aeration systems.....	222
2.3.1. Criteria and comparison of aeration systems.....	222
2.3.2. Surface aeration.....	224
2.3.3. Compressed air aeration.....	227
2.3.4. Mixed aeration: the Vortimix aerator.....	229
2.3.5. Use of pure oxygen.....	230
3. Biological treatability of waste waters.....	232
3.1. Pilot laboratory units.....	233
3.2. Manometric methods.....	234
4. Control of biological processes.....	236
4.1. Purpose of control.....	236
4.2. Principle of control.....	237
4.3. Practical applications.....	240
4.3.1. Control of oxygen input.....	240
4.3.2. Control of the sludge mass.....	242
4.3.3. Control of pollution load admitted.....	243
4.3.4. Control of a pure oxygen treatment system.....	244
CHAPTER 9. — WATER FILTRATION.....	245
1. General.....	245
A. Filtering mechanisms.....	245
B. Clogging and washing of the filter material.....	246
C. Choice of filtering method.....	247
2. Surface filtration.....	247

2.1. Filtration through thin media.....	247
2.2. Filtration through thick porous media.....	249
2.3. Filtration through precoated supporting media.....	250
3. Filtration through a filter bed	254
3.1. General	254
3.2. Slow filtration.....	255
3.3. Rapid filtration	255
3.3.1. Methods of rapid filtration	255
3.3.2. The porous medium	259
3.3.3. The use of porous media	265
A. Downward filtration through a single heterogeneous layer..	265
B. Downward filtration through a uniform layer	266
C. Filtration through a multi-layer filter bed	267
3.4. Washing	269
3.4.1. Methods of washing	269
3.4.2. Frequency of washing	271
3.4.3. Consumption of wash-water	271
3.4.4. Choice of nozzles	272
3.4.5. Quantities of suspended solids which can be removed by filtration	273
4. Pressure filters	274
4.1. Vertical filters washed by water alone	274
4.2. Vertical filters designed for washing by air and water.....	275
4.2.1. Filters with a single uniform layer washed simultaneously by air and water	275
4.2.2. Single and double-layer filters washed successively by air and water	277
4.2.3. U.H.R. filters	277
4.2.4. Double and triple towers.....	278
4.2.5. Reverse-current filters	279
4.3. Horizontal filters	282
5. Open filters.....	282
5.1. Rapid filters	283
5.1.1. Aquazur T and N filters	283
5.1.2. Mediazur T and N filters	289
5.1.3. Mediazur G filters	290
5.2. High-rate filters	291
5.2.1. Aquazur V filters	291
5.2.2. Mediazur V filters.....	295
5.2.3. Mediazur GH filters	296
5.2.4. D2F filters	297
5.3. Valveless self-washing filters	298
5.4. Dry filters	299
6. Filter control	300
6.1. Variable-level, constant-output filters	300

6.2. Constant-output filters	301
6.2.1. Filter controllers	301
A. Hydraulic controller	301
B. Electronic controller	303
6.2.2. Controlling a battery of filters	304
6.3. Declining rate filters	309
7. Monitoring and automation	311
Monitoring equipment	311
7.2. Automation	312
CHAPTER 10. — ION EXCHANGE	313
1. Properties of an ion exchange material	313
2. Ion exchange vocabulary	314
3. Main types of ion exchangers	315
3.1. Cation exchangers	315
3.2. Anion exchangers	317
4. Use of ion exchangers	319
4.1. Fixed beds with downward flow regeneration	319
4.1.1. Softening	321
4.1.2. Carbonate removal by ion exchange resins	321
4.1.3. Total deionization	322
4.2. Back-flow regeneration: use of stratified beds	328
4.3. Mixed bed installation	332
4.4. Moving-bed ion exchange processes	333
5. Performance checks and additional treatments	338
5.1. Checking the performance of a deionization plant	338
5.2. Removal of organic matter by adsorbent resins	338
5.3. Disinfection of ion exchangers	340
CHAPTER 11. — ADSORPTION AND ADSORBENTS	341
1. Main adsorbents	341
1.1. Activated carbon	341
1.2. Other adsorbents	342
2. Use of activated carbon	343
2.1. Powdered carbon	343
2.2. Granular carbon	345
2.2.1. Characteristics	345
2.2.2. Carbon bed technology	345
2.2.3. Adsorptive capacity of carbon	347
2.2.4. Regeneration	347
2.3. Combined use of powdered and granular carbon	348
2.4. Main applications	348
CHAPTER 12. — SEPARATION BY MEMBRANES	349
1. Reverse osmosis	349

2.1. pH correction (neutralization).....	387
2.1.1. Addition of basic reagents	387
2.1.2. Filtration through alkaline-earth media	388
2.1.3. Acidification	390
2.1.4. Reciprocal neutralization	390
2.2. Remineralization	390
2.3. Precipitation inhibition	392
2.4. Reduction of oxygen	395
2.5. Corrosion inhibition	396
2.5.1. Simple inhibitors.....	396
2.5.2. Compound inhibitors	397
2.6. Use of miscellaneous agents	399
A. Biocides	399
B. Cleaning agents	400
CHAPTER 15. — OXIDATION, DISINFECTION	401
1. Oxidation and disinfection by chlorine	401
1.1. The action of chlorine.....	401
1.2. The use of chlorine.....	402
1.2.1. Prechlorination	402
1.2.2. The disinfection of drinking water.....	403
1.2.3. Control and storage	404
2. Oxidation and disinfection by chlorine derivatives.....	405
2.1. Chloramines.....	405
2.2. Chlorine dioxide	405
2.3. Sodium hypochlorite	407
3. Electrochlorination	408
3.1. Principle	408
3.2. Electrolyser design	408
3.3. Operating conditions	409
4. Oxidation and disinfection by ozone	410
4.1. Characteristics and production of ozone	410
4.1.1. Physical characteristics	410
4.1.2. Principles of ozone production.....	410
4.1.3. Types of ozonizers	411
4.1.4. Production technology	413
4.2. Application of ozone.....	420
4.2.1. Principle	420
4.2.2. Water/ozone contact	421
4.2.3. Destruction of residual ozone.....	423
4.2.4. Precautions when using ozone	423
4.2.5. Analytical methods for ozone measurement	424
5. Other oxidation and disinfection processes	425
5.1. Potassium permanganate	425

5.2. Bromine	425
5.3. Chlorine/bromine mixtures	425
5.4. Ultra-violet radiation	426
5.5. Silver	426
5.6. Ionizing radiation	426

CHAPTER 16. — NATURE, STABILIZATION, THICKENING AND CONDITIONING OF SLUDGE

1. Origin and nature of the different types of sludge	427
1.1. Classification	427
1.2. Factors characterizing the nature of a sludge	430
1.3. Factors characterizing the structure of the sludge	431
1.4. Factors characterizing the behaviour of a sludge during dewatering ..	433
2. Disposal of treated sludge—By-products	433
3. Objectives of sludge treatment and the processes used	437
4. Sludge stabilization	437
4.1. Anaerobic digestion	437
4.1.1. Gas production—Temperature and retention time	439
4.1.2. Parameters affecting the efficiency of anaerobic digestion	440
4.1.3. Results of treatment—Advantages of digestion	441
4.1.4. One- or two-stage digestion—Design principles	442
4.1.5. Design of the digesters	444
A. Medium-rate digestion	444
B. High-rate digestion	446
C. Mixing systems in the digesters	447
D. Heating of digesters	449
4.1.6. Starting and operating a digestion unit	450
4.2. Aerobic stabilization of sludge	452
4.2.1. Anaerobic digestion and aerobic stabilization	452
4.2.2. Criteria for assessing good stabilization	454
4.2.3. Designing a sludge-stabilizing unit	455
4.2.4. Aerobic stabilization procedure	456
4.3. Chemical stabilization of sludge	457
4.4. Pasteurization	458
4.5. Irradiation	459
5. Sludge thickening	459
5.1. Thickening by settling	460
5.1.1. Non-scraped thickeners	462
5.1.2. Mechanized thickeners	462
5.1.3. Construction of thickeners	464
5.2. Thickening with elutriation	465
5.3. Thickening by flotation	465
6. Conditioning	468
6.1. Chemical conditioning	469

6.1.1. Mineral reagents	469
6.1.2. Polyelectrolytes	472
6.2. Thermal conditioning	474
6.2.1. Heating the sludge	474
6.2.2. Sludge heating procedure	477
6.2.3. Wet combustion	479
6.3. Other methods of conditioning	480
6.3.1. Freezing	480
6.3.2. Conditioning with inert additives	480
6.3.3. Conditioning by means of solvents	480
CHAPTER 17. — SLUDGE DEWATERING, DRYING, AND INCINERATION	481
1. Dewatering	481
1.1. Filtration	481
1.1.1. Numerical characterization of filtrability	481
A. Specific filtration resistance	481
B. Compressibility	483
C. Maximum dryness	483
1.1.2. Drying beds	485
1.1.3. Filter bags	487
1.1.4. Vacuum filtration	488
A. Description and mode of operation	488
B. Output capacity	491
C. Calculating the rate of chemical conditioning	492
D. Performance	493
E. Vacuum filtration practice	494
1.1.5. Filterbelt presses	495
A. Description and operation	496
B. Performance	498
1.1.6. Pressure filtration	501
A. Description and mode of operation	501
B. Filtration cycle	502
C. Filtration capacity	504
D. Performance	506
E. Pressure filtration practice	509
1.1.7. Automated thin-cake pressure filtration	510
1.1.8. Continuous presses	510
A. Screw type	510
B. Disc type	510
1.2. Centrifugation	511
1.2.1. Centrifugation and centrifugability	511
1.2.2. Continuous decanters	513
A. Constructional parameters	513

B. Operating parameters	516
C. Performance	516
D. Continuous decanter practice	518
1.2.3. Accelerated sludge thickening by centrifugation	519
1.3. Mobile dewatering units	520
2. Drying and incineration	521
2.1. Heat balance	522
2.2. Main components of a drying and incineration plant	523
2.3. Phases and methods of drying	524
2.4. Principal types of furnaces	526
2.4.1. Multiple-hearth furnace	526
2.4.2. Rotary kilns	528
2.4.3. Fluidized bed incinerators	530
2.4.4. Flash driers	532
2.5. Pyrolysis	532
2.6. Flue gas treatment	533
2.7. Sludge and domestic refuse	534
CHAPTER 18. — REAGENT STORAGE AND FEEDING	535
1. Principal reagents used in water treatment	535
1.1. Specific reagents	535
1.2. General reagents	535
2. Storage of reagents	542
2.1. Powder reagents	542
2.2. Liquid reagents	544
2.3. Gaseous reagents	545
3. Preparation of solutions and suspensions	546
4. Reagent feeding	548
4.1. Distribution in liquid form	548
4.1.1. Dosing-pump feeding	548
4.1.2. Gravity-feed dosing	551
4.1.3. Displacement feed	553
4.2. Measurement and distribution of reagents in dry powder form	555
4.2.1. Volumetric feeders	555
4.2.2. Gravimetric feeders	558
4.3. Feeding of reagents in gaseous form	560
4.3.1. Chlorine supply to dosing equipment	560
4.3.2. Chlorinators operating under a vacuum	563
4.4. Monitoring the rate of reagent feed by the flow of water and the value of a physico-chemical parameter	565
CHAPTER 19. — MEASUREMENT, MONITORING, CONTROL AND AUTOMATION	567
1. Automatic measurement and monitoring processes in water treatment	567
1.1. General	567

1.2. Automatic measurement and monitoring of common parameters...	570
1.3. Automatic measurement and monitoring of specific parameters....	572
1.3.1. Automatic physical methods.....	573
1.3.2. Automatic chemical methods.....	581
1.3.3. Automatic analysing station.....	583
1.3.4. Ichthyo-testing.....	584
2. Control.....	585
2.1. General principles.....	585
2.2. The four modes of control.....	586
2.3. Choice of control method.....	589
2.3.1. Choice of control mode.....	589
2.3.2. Choice between electric and pneumatic controllers.....	590
3. Automation.....	591
3.1. General remarks.....	591
3.2. Different forms of automatic operation.....	591
3.3. Programmable automatic unit.....	593
3.4. Industrial data processing.....	595

*Part Three : Treatment Methods According to the Nature
and the Final Use of the Water.....* 597

CHAPTER 20. — DRINKING WATER TREATMENT.....	597
1. Choice between sources of supply.....	599
1.1. Quality of the available water.....	599
1.2. Quantity of water required.....	604
1.3. Cost of finding water.....	604
2. Impurities found in water for human consumption.....	605
2.1. Mineral pollutants and micropollutants.....	605
2.2. Organic pollutants and micropollutants.....	606
2.2.1. Phenols and derivatives.....	606
2.2.2. Hydrocarbons.....	606
2.2.3. Detergents.....	607
2.2.4. Pesticides and plant-health products.....	609
2.3. Biological pollutants and micropollutants.....	610
2.3.1. Microorganisms and viruses.....	610
2.3.2. Secretions of microfauna and microflora.....	610
2.4. Impurities from reagents used in water treatment.....	611
3. Principles of drinking water treatment.....	611
3.1. General processes.....	611
3.1.1. Treatment at water intakes.....	611
3.1.2. Raw water storage.....	614
3.1.3. Prechlorination.....	614

3.1.4. Aeration	615
3.1.5. Clarification	616
a) Clarification by complete coagulation, flocculation, settling and filtration	617
b) Clarification by partial coagulation, flocculation and filtration	619
3.1.6. Disinfection	620
3.1.7. Adsorption	622
3.1.8. Sludge treatment	623
3.2. Specific forms of treatment to remove and correct the constituents of natural water	624
3.2.1. Removal of iron and manganese	624
a) Natural state of iron and manganese	624
b) Oxidation and filtration	626
b 1) Iron removal without clarification	627
b 2) Iron removal with clarification	629
b 3) Removal of manganese	629
c) Treatment combined with carbonate	632
d) Biological treatment	634
e) Filtration using special media	634
f) Powdered magnesia and diatomaceous earth	635
3.2.2. Neutralization—remineralization	635
3.2.3. Carbonate removal—softening	636
3.2.4. Removal of sulphates and chlorides	637
3.2.5. Fluoridation and fluoride removal	637
3.2.6. Removal of nitrogen and its compounds	639
3.2.7. Destruction of algae and plankton	640
3.2.8. Elimination of organic matter	642
3.2.9. Deodorization of water	643
3.3.0. Elimination of micropollutants	646
A. Phenols and phenol compounds	646
B. Hydrocarbons	647
C. Detergents	647
D. Pesticides	649
E. Heavy metals	650
4. Purification works	651
4.1. Combined units and standard plant	651
4.1.1. GSF plants	651
4.1.2. Bidondo units	652
4.1.3. Aquazur plants	653
4.2. Medium-sized and large plants	656
4.2.1. Principles	656
4.2.2. Clarification of polluted surface water or underground water ..	657
a) Slightly turbid water	657
b) Water of average turbidity	658

c) Heavily polluted water	662
4.2.3. Treatment of slightly polluted water	665
4.2.4. Treatment for aerated beverages	666
CHAPTER 21. — SWIMMING POOL WATER TREATMENT.....	669
1. Principles	669
2. French regulations	669
2.1. Recirculation rate and renewal of water	670
2.2. Water recirculation	671
2.3. Quality of water in pools	672
3. Treatment processes for closed circuit swimming pool water	673
3.1. Prefiltration—pumping	673
3.2. Filtration	673
3.3. Disinfection	675
3.3.1. Chlorine and derivatives	676
3.3.2. Bromine	676
3.3.3. Ozone	676
3.3.4. Other processes	677
3.3.5. Destruction of algae	679
3.4. Special cases	679
3.5. Cleaning the pool	680
CHAPTER 22. — TREATMENT OF BOILER AND COOLING SYSTEM	
 WATER	681
1. Boiler-water treatment	681
1.1. Quality requirements for boiler-water	681
1.1.1. Boiler-water circuits	681
1.1.2. Difficulties caused by impurities in the make-up water	682
1.1.3. Standards for water for use in steam generating plant	683
1.1.4. Difficulties caused by impurities in condensates	685
1.2. Purification and conditioning	686
1.2.1. Carbonate removal and softening	688
1.2.2. Total deionization of make-up water	689
1.2.3. Treatment of condensate	690
2. Cooling circuits	695
2.1. Types of cooling systems	695
2.2. Semi-open circuits	696
2.3. Scaling and corrosion	698
2.3.1. Equilibrium techniques	698
2.3.2. Scale-inhibiting processes	699
2.3.3. Corrosion-inhibiting processes	700
2.3.4. Waste disposal	700
2.4. Fouling	701
2.5. How to design a cooling circuit	703

CHAPTER 23. — TREATMENT OF INDUSTRIAL PROCESS WATER	705
1. General problems	705
1.1. Basic functions of water in industry	706
1.2. Typical quantities of water used by industry	706
1.3. Industrial process water deterioration	707
1.4. Make-up waters	707
1.5. Conditioning	709
1.6. Reuse and recirculation	709
1.6.1. Recirculation rate	710
1.6.2. Reuse of waste water	711
1.7. Organization of systems	712
2. Metallurgical industries	713
2.1. Gas scrubbing	713
2.2. Hydrometallurgy	713
2.3. Iron and steel	716
2.4. Copper production	719
2.5. Nickel production	720
2.6. Zinc production	721
2.7. Aluminium production	721
2.8. Uranium production	722
3. The paper industry	723
4. The food and agricultural industries	724
4.1. Sugar factories and sugar refineries	724
4.2. Dairy industries	725
4.3. Breweries, distilleries and aerated drink plants	726
4.4. Vegetable canneries	726
5. Other industries	727
5.1. The textile industry	727
5.2. Chemical and pharmaceutical industries	727
5.3. Manufacture of electronic components	727
5.4. Metal finishing	728
5.5. Oil	729
5.6. Miscellaneous industries using deionized water	729
6. Brine purification	729
CHAPTER 24. — TREATMENT OF DOMESTIC SEWAGE	731
1. Nature of domestic sewage	731
1.1. Composition	731
1.2. Assessment of domestic sewage	731
1.3. Objectives	735
1.4. The main processes and their purification efficiencies	736
2. Biological treatment	739
2.1. General	739
2.2. Extended aeration type treatment plants	739

2.2.1. Type MA plant.....	740
2.2.2. Minibloc AP plant.....	741
2.2.3. Type MV plant.....	742
2.2.4. Type UI plant.....	742
2.2.5. Type AOS plant.....	745
2.2.6. Type AC plant.....	745
2.2.7. Oxidation ditches; carrousel.....	748
2.3. Plants using medium-load purification followed by aerobic stabilization.....	746
2.3.1. SA combinations.....	746
2.3.2. Type SAM plant.....	748
2.3.3. Minibloc AC plant.....	748
2.4. Medium- or high-load plants with anaerobic digestion or direct sludge treatment.....	749
2.4.1. General design.....	749
2.4.2. Monitoring and operation.....	751
2.4.3. Large plants.....	753
A. Common arrangements.....	753
B. Aeration facilities.....	754
C. Flow control.....	757
D. Measurements and closed loop control facilities.....	758
E. Power autonomy.....	764
2.4.4. Comparison of the main sludge treatment systems.....	765
2.4.5. Sludge handling.....	766
2.4.6. Environmental nuisance control.....	769
2.4.7. Examples of large plants.....	771
2.5. Other biological treatment systems.....	781
2.5.1. Treatment plants using primary settling, conventional-media biological filters and anaerobic sludge digestion.....	781
2.5.2. Treatment plants using plastic filled biological filters associated with activated sludge treatment.....	781
2.5.3. Treatment plants using pure oxygen.....	783
2.5.4. Natural aerobic lagooning; aerated lagooning.....	785
2.6. Variable population plants.....	787
3. Physicochemical treatments.....	788
3.1. General.....	788
3.2. Flocculation and physical separation.....	791
3.3. Combination of physicochemical and biological processes.....	792
3.4. Physicochemical treatment sludge.....	795
4. Tertiary treatment.....	798
4.1. General.....	798
4.2. Polishing techniques.....	798
4.3. Phosphate removal.....	800
4.4. Nitrogen elimination.....	801

4.5. Elimination of nonbiodegradable pollution.....	805
4.6. Disinfection	805
CHAPTER 25. — TREATMENT OF INDUSTRIAL EFFLUENTS.....	807
1. General.....	807
1.1. Specific pollution factors.....	807
1.2. Characterization of effluents.....	809
1.3. Separate treatments.....	809
1.4. Preliminary treatment.....	810
1.5. Physicochemical treatment.....	810
1.6. Biological treatment.....	811
1.7. Elimination of nonbiodegradable COD.....	812
1.8. Industrial sludge.....	812
2. Agricultural and foodstuffs industries.....	813
2.1. Dairy products industries.....	813
2.2. Vegetable and fruit canning factories.....	816
2.3. Abattoirs and meat packing factories.....	816
2.4. Breweries and fermentation industries.....	819
2.5. Sugar refineries and distilleries.....	820
2.6. Starch factories and potato process industries.....	822
2.7. Oil mills and soap factories.....	823
2.8. Tanneries and leather industries.....	824
2.9. Piggeries and stock raising effluents.....	824
3. Pulp and paper industries.....	825
3.1. Paper and board mills.....	825
3.2. Paper pulp mills.....	826
3.2.1. Nature of effluents.....	826
3.2.2. Purification treatment.....	828
4. Textile industries.....	829
4.1. Nature of discharges.....	829
4.2. Order of magnitude of pollution loads.....	830
4.3. Purification techniques.....	831
5. Petroleum industry.....	832
5.1. Main sources of pollution.....	832
5.2. Treatment processes.....	834
6. Synthetic chemicals industry.....	837
6.1. Complete treatment systems.....	837
6.1.1. Physicochemical preliminary treatment.....	837
6.1.2. Secondary biological purification.....	838
6.1.3. Secondary physicochemical purification.....	840
6.2. Manufacture of polymers and fibres.....	840
7. Metallurgical and associated industries.....	842
7.1. Iron and steel industry.....	842
7.2. Aluminium metallurgy.....	844

7.3. Metal finishing industries.....	845
7.3.1. Metal finishing technology; pollution caused.....	845
7.3.2. Pollution prevention and product reclamation.....	848
7.3.3. Purification of residual pollution.....	849
A. Classification of forms of pollution and treatment.....	849
B. Basic treatment reactions.....	849
C. Treatment systems.....	851
D. Centralized detoxification plants.....	850
7.4. Purification of used soluble oils.....	856
8. Miscellaneous industries.....	858
8.1. Fossil fuel power plants.....	858
8.2. Nuclear industry.....	859
8.3. Fertilizer and phosphoric acid manufacture.....	861
8.4. Effluents from other industries.....	862

Part Four : Water : General Information..... 865

CHAPTER 26. — THE CHEMISTRY OF WATER AND REAGENTS.....	867
1. Chemistry.....	867
2. Characteristic constants of solutions.....	870
3. Characteristic constants of gases.....	887
CHAPTER 27. — METHODS OF ANALYSIS.....	894 3
1. General.....	894 3
1.1. Milliequivalent and degree.....	894
1.2. Hardness and alkalinity.....	896
1.3. List of French standards — tests for water.....	898
2. Taking samples for analysis.....	902
2.1. Drinking water.....	902
2.2. Waste water.....	902
2.3. Preservation of samples.....	904
3. Rapid field analysis.....	904
3.1. Colorimetric analysis methods—analytical methods 201-220.....	905
3.2. Volumetric analysis methods—analytical methods 301-315, 322, and 324.....	908
4. Physical methods.....	913
Methods 316 to 318 and 321.....	913
5. Presentation and interpretation of analytical results for drinking water... ..	916
5.1. Presentation of results of analysis.....	916
5.2. Interpretation of results.....	917
5.3. Unwanted or toxic substances dissolved in water.....	921
5.4. Chemicals deliberately added to water.....	921

6. Examination of waste waters—Analytical methods Nos. 401 to 416.....	921
7. Examination of filtering materials—Analytical methods Nos. 501 to 509.	939
8. Physicochemical tests for drinking water treatment—Analytical methods Nos. 701 to 712.....	947
9. Examination of water treatment sludge—Analytical methods Nos. 801 to 809.....	957
CHAPTER 28. — BIOLOGY.....	963
1. General remarks.....	963
2. Concepts of ecology.....	963
2.1. Definitions.....	963
2.2. The ecology of lakes: eutrophication.....	965
2.3. River ecology: biotic indices.....	965
2.4. Biological tests for pollution.....	966
3. Principles of classification of living creatures.....	967
3.1. The bacterial kingdom.....	967
3.2. The vegetable kingdom.....	967
3.3. The animal kingdom.....	970
4. Bacteriology.....	972
4.1. General characteristics of the bacteria.....	972
4.2. Pathogenic bacteria found in water.....	973
4.3. Bacteriological analysis of water.....	973
4.4. The enzymes.....	974
4.5. Fermentations.....	975
4.6. The nitrogen cycle.....	975
4.7. The sulphur cycle.....	978
4.8. Bacterial oxidation of iron and of manganese.....	979
4.9. Bacteria concerned in the obstruction and corrosion of pipework....	980
5. Virology.....	981
6. Pathogenic organisms other than bacteria.....	982
7. A study of plankton.....	985
7.1. Problems due to plankton.....	985
7.2. Quantitative estimate of plankton.....	987
7.3. Description of plankton.....	988
7.3.1. Phytoplankton.....	988
7.3.2. Zooplankton.....	1000
8. The microflora and microfauna of activated sludge.....	1006
8.1. Purifying bacteria.....	1006
8.2. The bulking of sludge.....	1006
8.3. Predators.....	1007

<i>Part Five : Formulae</i>	1013
<hr/>	
CHAPTER 29. — UNITS OF MEASUREMENT.....	1015
1. Systems of units.....	1015
2. Système International d'Unités (International System of Units).....	1015
2.1. General principles.....	1016
2.2. Definitions of basic units and supplementary units.....	1017
2.3. Basic units. Derived units for frequently occurring quantities.....	1018
2.4. Units not recommended or to be avoided.....	1020
3. Si units and imperial or U.S. units—conversions.....	1021
CHAPTER 30. — MATHEMATICAL NOTES.....	1029
1. Algebra and arithmetic.....	1029
2. Trigonometrical formulae.....	1031
3. Geometrical formulae.....	1032
3.1. Plane surfaces.....	1032
3.2. Surface areas and volumes of solids.....	1034
4. Length of arcs, chords, sagitta, and areas of segments.....	1037
5. Common factors in calculations.....	1040
6. Simple interest.....	1041
7. Compound interest.....	1042
8. Repayments.....	1043
9. Trigonometrical tables.....	1044
CHAPTER 31. — HYDRAULICS.....	1049
1. Guidelines for the estimation of water requirements.....	1049
2. Head losses through friction in water pipes.....	1051
2.1. Empirical formulae.....	1051
2.2. Colebrook formula.....	1051
2.3. Tables of values of the loss of head J for pipe diameters between 0.04 and 2.5 m.....	1057
3. Local head losses in pipes.....	1069
4. Design and calculation of negative pressure systems.....	1076
5. Flow rates for orifices and nozzles.....	1077
6. Flow of water in channels.....	1079
7. Weirs.....	1082
8. Head losses for any fluid.....	1086
9. Miscellaneous information.....	1089
CHAPTER 32. — ELECTRICITY.....	1093
1. Notations—Units—Symbols.....	1093
2. Usual definitions and formulae.....	1093

3. Industrial applications.....	1096
3.1. General installations.....	1096
3.2. Motors.....	1097
4. Numerical values and orders of magnitude.....	1102
CHAPTER 33. — HEAT.....	1103
1. Gas physics and thermodynamics.....	1103
1.1. Ideal gases.....	1103
1.2. Water vapour.....	1104
1.3. Wet gases.....	1107
2. Heat generation.....	1108
2.1. Calorific value.....	1108
2.2. Combustion.....	1110
3. Heat exchange.....	1112
3.1. Definitions.....	1112
3.2. Heat exchangers.....	1113
4. Numerical data.....	1116

Part Six : Legislation..... 1119

CHAPTER 34. — LEGISLATION AND REGULATIONS.....	1121
1. General information.....	1121
1.1. Works to consult.....	1121
1.2. Useful addresses.....	1123
1.2.1. France.....	1123
1.2.2. Other countries.....	1124
2. Drinking water and swimming pool water.....	1124
2.1. Recommendations of W.H.O.....	1124
2.2. French regulations governing the quality of water for human consumption.....	1129
2.3. Conditions for using certain substances in drinking water treatment.....	1132
2.4. Table comparing standards for drinking water quality in the EEC and a few other countries.....	1134
2.5. Swimming pool regulations.....	1138
2.5.1. Swimming pools in France.....	1138
2.5.2. Bathing waters in the EEC.....	1139
3. Waste waters.....	1140
3.1. Domestic sewage and industrial effluents in France.....	1140
3.1.1. Water discharge regulations.....	1140
A. General case.....	1140
B. Particular cases.....	1142

3.1.2. Sludge of agronomic value produced by water treatment plant..	1142
3.2. Table comparing discharge standards in several countries.....	1144
3.3. Industrial wastes (in France).....	1146
4. Various legislation.....	1147
4.1. Air pollution.....	1147
4.2. Noise abatement.....	1148
BIBLIOGRAPHIC DATA.....	1151
ALPHABETICAL INDEX.....	1159

<i>First French edition</i>	1950
<i>Second French edition</i>	1952
<i>Third French edition</i>	1954
<i>First English edition</i>	1955
<i>Fourth French edition</i>	1958
<i>First Spanish edition</i>	1959
<i>Second English edition</i>	1960
<i>Fifth French edition</i>	1963
<i>Third English edition</i>	1965
<i>Second Spanish edition</i>	1965
<i>Sixth French edition</i>	1966
<i>Seventh French edition</i>	1972
<i>Fourth English edition</i>	1973
<i>Third Spanish edition</i>	1973
<i>First German edition</i>	1974
<i>First Yugoslav edition</i>	1976
<i>Eighth French edition</i>	1978
<i>Fifth English edition</i>	1979
<i>Fourth Spanish edition</i>	1979
