Polyurethane Handbook

Chemistry — Raw Materials — Processing —
Application — Properties

Edited by Dr. Günter Oertel

With 544 Figures and 121 Tables

With contributions from

L. Abele, Dr. A. Awater, H. Boden, Dr. F.-K. Brochhagen, Dr. M. Dahm,
Dr. D. Dieterich, Dr. W. Dietrich, Prof. Dr. W. Diller, Dr. M. Dollhausen,
Dr. F. Ehrhard, Dr. H.-A. Freitag, G. Gabrysch, Dr. H. Gall, Dr. W. Goyert,
Prof. Dr. E. Grigat, Dr. W. Hahn, Dr. G. Hauptmann, Dr. H. Hespe,
Dr. R. Hirtz, J. Hoffmann, H.-G. Hoppe, Dr. W. Kallert, Dr. H. Kleimann,
Dr. U. Knipp, Dr. H. J. Koch, Dr. K.-J. Kraft, B. Krüger, Dr. R. Kubens,
Dr. G. Loew, Dr. E. Meisert †, Dr. G. Mennicken, Dr. F. Müller, H. Ostromov
F. Prager, Dr. K. Recker, Dr. M. Roegler, Dr. H. M. Rothermel,
Dr. H.-D. Ruprecht, H.-I. Sachs, Dr. H. Schäfer, Dr. K. Schauerte,
Dr. H.-G. Schneider, K. Schulte, Dr. K. Seel, Dr. H. Thomas, Dr. H. Toepesch,
Dr. H. Träubel, Dr. K. Uhlig, Dr. J. Vogel, Dr. R. Volland, U. Walber,
Dr. Ch. Weber, Dr. W. Wellner, H. Wiczorrek, Dr. H. Wirtz,
Dr. K.-H. Wolf, Dr. R. Zöllner

Contents

1 Polyurethanes and their Market	
(<i>Dr. R. Hirtz, Dr. K. Uhlig</i>)
1.1 The Development of the Polyurethanes
1.2 The Market of the Polyurethanes
Reference list for Chapter 1
2 Chemical and Physical-Chemical Principles of Polyurethane Chemistry	
(<i>Dr. D. Dieterich, Prof. Dr. E. Grigat, Dr. W. Hahn</i>)
2.1 Chemical Principles (<i>Prof. Dr. E. Grigat</i>)
2.1.1 Basic reactions of the isocyanate group
2.1.1.1 Addition of nucleophilic reactants
2.1.1.2 Self-addition reactions of isocyanates
2.1.2 Formation of polyurethanes
2.2 Important Building Blocks for Polyurethanes (<i>Dr. W. Hahn</i>)
2.2.1 Isocyanates
2.2.2 Polyols
2.2.3 Diamines
2.2.4 Additives
2.3 Preparation Methods for Polyurethanes (<i>Dr. D. Dieterich</i>)
2.3.1 Solvent-free reactions
2.3.1.1 One-shot process
2.3.1.2 Prepolymer process
2.3.2 Reactions in solution
2.3.2.1 Completely reacted one-component systems
2.3.2.2 Reactive one-component systems
2.3.2.3 Two-component systems
2.3.3 Aqueous two-phase systems
2.4 Recent Developments (<i>Dr. D. Dieterich</i>)
2.4.1 Aqueous polyurethane dispersions
2.4.1.1 Emulsifier-containing dispersions
2.4.1.2 Ionomer dispersions
2.4.1.3 Non-ionic dispersions
2.4.1.4 Properties of dispersions
2.4.2 Powders
2.4.3 Microcapsules
2.4.4 Hydrogels
2.4.5 Aqueous solutions
2.4.6 Poromerics
2.4.7 Medical applications
2.4.7.1 Applications for external use
2.4.7.2 Artificial organs
2.4.8 Matrix foams
2.4.9 Organo-mineral systems
2.4.10 Mixtures with other polymers
2.5 Perceptions on the physical chemistry of the structure of polyurethanes
(<i>Dr. D. Dieterich in cooperation with Dr. H. Hespe</i>)

2.5.1	Two-component polyurethanes without segmented structure
2.5.2	Segmented polyurethanes
2.5.2.1	Hard and soft segments
2.5.2.2	Segregation and domain morphology
2.5.2.3	Morphology within the hard segment domains
2.5.2.4	Effects of hard segments domains on mechanical and thermal properties
2.5.2.5	The effect of the soft segment matrix on thermal and mechanical properties
2.5.2.6	Crosslinked polyurethanes
2.5.3	Ionomers
	Reference list for Chapter 2

3 Raw Materials

(*Dr. K. Schauerle* in cooperation with *Dr. M. Dahm, Prof. Dr. W. Diller, Dr. K. Uhlig*)

3.0	Introduction (<i>Dr. K. Schauerle</i>)
3.1	Polyols (<i>Dr. K. Schauerle</i>)
3.1.1	Polyether
3.1.1.1	Chemical structure
3.1.1.2	Raw materials for polyethers
3.1.1.3	Commercial production
3.1.1.4	Typical properties
3.1.1.5	Transport, storage, handling
3.1.1.6	Quality and analysis
3.1.1.7	Commercial products
3.1.2	Polyester
3.1.2.1	Chemical structure
3.1.2.2	Raw materials for polyesters
3.1.2.3	Commercial production
3.1.2.4	Properties
3.1.2.5	Transportation, storage, handling
3.1.2.6	Quality and analysis
3.1.2.7	Commercial products
	Reference list for Chapter 3.1
3.2	Isocyanates (<i>Dr. K. Schauerle</i>)
3.2.1	Reaction Characteristics
3.2.2	Starting Materials for Isocyanates
3.2.3	Commercial production
3.2.3.1	Chemical background
3.2.3.2	Phosgenation processes
3.2.3.3	Product processing
3.2.3.4	Special manufacturing processes
3.2.4	Characteristics
3.2.5	Transportation, storage, and handling
3.2.6	Quality and analysis
3.2.7	Commercial products
	Reference list for Chapter 3.2
3.3	Conversion Products of Raw Materials (<i>Dr. K. Schauerle</i>)
3.3.1	Conversion products of polyols

3.3.1.1	Filled polyols	
3.3.1.2	Polyol prepolymers	
3.3.1.3	Storage, transport, handling	
3.3.2	Conversion products of polyisocyanates	
3.3.2.1	Low-molecular weight urethane polyisocyanates	
3.3.2.2	Polyisocyanates with uretdion, isocyanurate, and carbodiimide groups	
3.3.2.3	Polyisocyanates with allophanate, urea, and biuret groups	
3.3.2.4	Polyisocyanate prepolymers	
3.3.2.5	Blocked polyisocyanates	
3.3.2.6	Fatty acid-modified isocyanates	
3.3.2.7	Transport, storage, handling	
3.3.3	High-molecular weight polyurethane-polyols	
3.3.3.1	Solid materials	
3.3.3.2	Solutions of solid materials	
3.3.3.3	Polyurethane polyols produced in solution	
3.3.3.4	Solid materials from solutions	
3.3.3.5	Transport, storage, handling	
	Reference list for Chapter 3.3	
3.4	Additives and Auxiliary Materials (<i>Dr. M. Dahm, Dr. K. Uhlig</i>)	
3.4.1	Catalysts	
3.4.1.1	Terms of reaction kinetics	
3.4.1.2	Catalysts for NCO/NCO-reactions	
3.4.1.3	Catalysts for the NCO/OH-reaction	
3.4.2	Inhibitors	
3.4.3	Cross-linkers/chain extenders	
3.4.3.1	Alcohols	
3.4.3.2	Amines	
3.4.3.3	Special cross-linking principals	
3.4.4	Surfactants	
3.4.4.1	Emulsifiers	
3.4.4.2	Foam stabilizers	
3.4.4.3	Cell regulators	
3.4.5	Blowing agents	
3.4.5.1	Chemical blowing procedure	
3.4.5.2	Physical blowing procedures	
3.4.6	Additives for flame retardance	
3.4.7	Fillers	
3.4.8	Antiaging agents	
3.4.9	Mold release agents	
3.4.10	Biocide addition agents	
3.4.11	Coloring agents and coloring	
3.4.12	Special additives	
3.4.13	Handling, storage, transport	
	Reference list for Chapter 3.4	
3.5	Industrial Hygiene of PU Raw Materials (<i>Prof. Dr. W. F. Diller</i>)	
3.5.1	Polypols and polyol formulations	
3.5.2	Isocyanates	
3.5.2.1	Acute effects of isocyanates	
3.5.2.2	Chronic exposure to isocyanate	
3.5.2.3	Protective medical measures	

3.5.3 Additives
3.5.3.1 Catalysts
3.5.3.2 Crosslinkers
3.5.3.3 Blowing agents and solvents
3.5.3.4 Other additives
Reference list for Chapter 3.5
4 Polyurethane Processing	
(H. Boden, K. Schulte, Dr. H. Wirtz)
4.1 Basics
4.2 Design Principles for Polyurethane Processing Equipment
4.2.1 Comparison of the metering and mixing machine systems
4.2.2 Comparison of the plant systems
4.3 Steps of the Polyurethane Processing
4.3.1 Delivery and storage of the raw materials
4.3.2 Preparation of components
4.3.3 Metering
4.3.4 Mixing
4.3.5 Pouring
4.3.6 Process Controls
Reference list for Chapter 4
5 Flexible Foams	
(Dr. H. A. Freitag, Dr. G. Hauptmann, Dr. K. Recker, Dr. M. Roegler, Dr. H. Schäfer, Dr. R. Volland)
5.0 Introduction (Dr. G. Hauptmann)
5.1 Slabstock Foams (Dr. M. Roegler)
5.1.1 Production of slabstock foams
5.1.1.1 Machines for the production of slabstock foams
5.1.1.2 Process description
5.1.1.3 Curing and storing of slabstock foams
5.1.1.4 Fabrication of slabstock foams
5.1.1.5 Utilization of cutting scrap
5.1.1.6 Slab foam systems and their manufacturing formulations
5.1.2 Properties of slabstock foams
5.1.3 Applications for slabstock foams
5.1.3.1 Furniture cushioning
5.1.3.2 Mattresses
5.1.3.3 Transportation
5.1.3.4 Textile foams
5.1.3.5 Packaging
5.1.3.6 Household goods
5.1.3.7 Miscellaneous application
5.2 Carpet Backing (Dr. K. Recker)
5.2.1 Products for backing
5.2.2 Production
5.2.2.1 Reverse coating
5.2.2.2 Direct coating

- 5.2.3 Properties
- 5.3 Flexible Polyurethane Molded Foam (*Dr. H.-A. Freitag, Dr. A. Volland*)
 - 5.3.1 Production of flexible molded foams
 - 5.3.1.1 Raw materials
 - 5.3.1.2 Process technology
 - 5.3.2 Properties of molded foams
 - 5.3.3 Applications of molded flexible foam
- 5.4 Semi-Rigid Polyurethane Molded Foams (*Dr. H. Schäfer*)
 - 5.4.1 Production
 - 5.4.1.1 Raw materials and production methods
 - 5.4.1.2 Processing technology
 - 5.4.2 Properties
 - 5.4.2.1 Mechanical properties
 - 5.4.2.2 Damping properties
 - 5.4.3 Applications
 - 5.4.3.1 Protective paddings
 - 5.4.3.2 Foamed cavities
 - 5.4.3.3 Energy management foams
 - 5.4.3.4 Floor mats
 - 5.4.3.5 Miscellaneous applications
- Reference list for Chapter 5

6 PU Rigid Foam

(*Dr. F.-K. Brochhagen, Dr. W. Dietrich, G. Gabrysch, Dr. K. J. Kraft, Dr. R. Kubens, Dr. G. Loew, Dr. R. Zöllner*)

- 6.0 Introduction (*Dr. K. J. Kraft*)
- 6.1 Chemistry and Raw Materials (*Dr. W. Dietrich*)
 - 6.1.1 Polyols
 - 6.1.2 Polyisocyanates
 - 6.1.3 Blowing agents and other additives
- 6.2 Manufacturing of Rigid Polyurethane Foams (*G. Gabrysch*)
 - 6.2.1 Manufacturing of buns
 - 6.2.2 Continuous production of panels
 - 6.2.2.1 Insulation panels
 - 6.2.2.2 Laminated panels with metal surfaces
 - 6.2.2.3 Composite panels
 - 6.2.3 Discontinuous production of panels
 - 6.2.3.1 Shell method
 - 6.2.3.2 Foam filling technique
 - 6.2.3.3 Fillers
 - 6.2.4 Foaming of appliances
 - 6.2.4.1 Refrigerator/Freezer cabinets
 - 6.2.4.1.1 Assembly lines with movable fixtures
 - 6.2.4.1.2 Installations with stationary fixtures
 - 6.2.4.2 Refrigerator and freezer doors
 - 6.2.4.3 Water heaters
 - 6.2.5 Processing of pre-insulated pipes
 - 6.2.6 Pipe shells
 - 6.2.7 PU in situ foam

6.2.7.1	Two-component in situ foam
6.2.7.2	Pressurized container system
6.3	Properties of PU Rigid Foam (<i>Dr. R. Zöllner</i>)
6.3.1	General
6.3.1.1	Isotropy – Anisotropy
6.3.1.2	Test samples for property determination
6.3.1.3	Cell structure
6.3.2	Mechanical properties
6.3.2.1	Compressive strength
6.3.2.2	Tensile strength
6.3.2.3	Bending and shear strength
6.3.2.4	Effect of heat and time on properties
6.3.3	Dimensional stability at low and high temperature
6.3.4	Open cells – Closed cells
6.3.5	Thermal conductivity
6.3.5.1	Effect of density
6.3.5.2	Effect of the cell gas
6.3.5.3	Effect of temperature
6.3.5.4	Effect of moisture
6.3.6	Water absorption
6.3.7	Thermal coefficient of expansion
6.3.8	Chemical resistance
6.3.9	Combustibility
6.4	Relationship between Production Methods and Properties (<i>Dr. W. Dietrich, Dr. R. Zöllner</i>)
6.4.1	Slabstock foam and continuously produced laminated boards
6.4.1.1	Slabstock foam
6.4.1.2	Continuously produced laminated boards with facers
6.4.1.2.1	Flexible facers
6.4.1.2.2	Rigid facers on one side
6.4.1.2.3	Rigid facers on both sides
6.4.2	Discontinuously produced PU sandwich elements
6.4.3	Molded parts with facers
6.4.3.1	Appliances
6.4.3.2	Preinsulated pipes for district heating
6.4.4	Pour-in-place rigid urethane foam
6.5	Application of Rigid PU Foams (<i>Dr. G. Loew</i>)
6.5.1	Refrigeration technology and appliances
6.5.1.1	Refrigerators and freezers
6.5.1.2	Commercial display cases
6.5.1.3	Refrigerated trucks and containers
6.5.1.4	Refrigerated Warehouses and walk-in-coolers
6.5.1.5	Water heaters
6.5.2	Construction industry
6.5.2.1	Insulation boards
6.5.2.2	Sandwich elements
6.5.2.3	Specialty elements
6.5.2.4	PU lightweight concrete
6.5.2.5	Wall blocks with integrated insulation
6.5.2.6	Spray foam
6.5.2.7	One-component foam from pressurized containers

6.5.3	Technical insulation
6.5.3.1	Pipe insulation
6.5.3.1.1	Half-shells and moldings
6.5.3.1.2	Preinsulated pipes
6.5.3.1.3	Pour-in-place foam
6.5.3.2	Insulation of tanks
6.5.3.2.1	Normal temperature range
6.5.3.2.2	Low temperature range
6.5.4	Automotive industry
6.5.4.1	Interior liners
6.5.4.2	Cavity foaming
6.5.5	Transportation
6.5.5.1	Refrigerated vehicles
6.5.5.2	Insulation for transportation of special products
6.5.5.3	Caravans and mobile homes
6.5.6	Shipbuilding
6.5.6.1	Foaming of cavities
6.5.6.2	Insulation of cold storage holds in fishing boats
6.5.6.3	Boat building
6.5.7	Packaging
6.5.7.1	Direct encapsulation
6.5.7.2	Transportation protection in vehicles
6.5.7.3	Sandwich-Cardboard Boxes
6.5.8	Other fields of application
6.5.8.1	Rigid polyurethane foams for horticulture
6.5.8.2	Sporting goods
6.5.8.3	Furniture
6.5.8.4	Solar technology
6.5.8.5	"Radomes"
6.6	Consolidation of Coal and Surrounding Strata (<i>Dr. R. Kuhens</i>)
6.6.1	Consolidation
6.6.1.1	The cartridge process
6.6.1.2	Injection process
	Reference list for Chapter 6

7 Polyurethane Integral Skin Foam

(*Dr. H. Kleimann, Dr. U. Knipp, Dr. E. Meisert †, Dr. H. Schäfer, Dr. H.-G. Schneider, Dr. K. Seel, Dr. H. Thomas, Dr. Ch. Weber, Dr. H. Wirtz*)

7.1	Introduction (<i>Dr. H. Wirtz</i>)
7.2	Production Technology (<i>Dr. U. Knipp</i>)
7.2.1	Metering and mixing technique
7.2.2	Gating and molds
7.2.2.1	Gating
7.2.2.2	Molds
7.2.3	Mold carriers
7.3	Flexible Polyurethane Integral Skin Foams
7.3.1	Polyether foams (<i>Dr. Ch. Weber</i>)
7.3.1.1	Manufacturing
7.3.1.2	Properties
7.3.2	Flexible polyester foams (<i>Dr. E. Meisert †</i>)

7.3.2.1	Production
7.3.2.2	Properties
7.3.3	Part production (<i>Dr. H. Schäfer</i>)
7.3.3.1	Test sheets
7.3.3.2	Parts
7.3.3.3	Release agents
7.3.3.4	Post-finishing
7.3.3.5	Coloring
7.3.4	Applications of flexible integral foams (<i>Dr. H. Schäfer, Dr. H. Thomas</i>)
7.3.4.1	Automotive and other technical applications
7.3.4.2	Shoe industry
7.4	Rigid PU Integral Skin Foam
7.4.1	Preparation (<i>Dr. U. Knipp</i>)
7.4.2	Properties (<i>Dr. H. Kleimann</i>)
7.4.3	Finishing (<i>Dr. H. Kleimann</i>)
7.4.4	Applications (<i>Dr. H.-G. Schneider</i>)
7.5	Reinforced PU Integral Skin Foams (<i>Dr. K. Seel</i>)
7.5.1	Production
7.5.2	The influence of fillers and reinforcing materials on the physical of integral skin foams
7.5.3	Applications
	Reference list for Chapter 7

8 Solide Polyurethane Materials

(*Dr. A. Awater, Dr. F. Ehrhard, Dr. W. Goyert, H.-G. Hoppe, Dr. W. Kallert, Dr. K. J. Kraft, B. Krüger, Dr. K. Recker, Dr. K. Schauerte, Dr. W. Wellner*)

8.0	Introduction (<i>Dr. K. J. Kraft</i>)
8.1	PU Casting Systems
8.1.1	PU cast elastomers (<i>Dr. A. Awater</i>)
8.1.1.1	Raw materials
8.1.1.2	Dewatering of the polyol
8.1.1.3	Hot cure systems, production and processing
8.1.1.4	Polyurethane cold cure systems
8.1.1.5	Reactive spray coatings
8.1.1.6	Properties of polyurethane cast elastomers
8.1.2	Casting Resins
8.1.2.1	Electrical Sector (<i>Dr. F. Ehrhard</i>)
8.1.2.2	Joint sealants (<i>Dr. W. Wellner</i>)
8.2	Thermoplastic Polyurethane Elastomers
8.2.1	Production (<i>Dr. W. Goyert</i>)
8.2.1.1	Laboratory preparation
8.2.1.2	Technical production
8.2.1.3	Mixtures with other materials
8.2.2	Processing (<i>B. Krüger</i>)
8.2.2.1	Preparation of the pellets
8.2.2.2	Post-treatment of the finished parts
8.2.2.3	Use of scrap and regrind
8.2.2.4	Addition of colorants
8.2.2.5	Injection molding
8.2.2.6	Extrusion

8.2.2.7	Calendering	
8.2.2.8	Bonding/Welding	
8.2.3	Properties (<i>Dr. W. Goyert</i>)	
8.2.3.1	Heat resistance	
8.2.3.2	Low temperature behavior	
8.2.3.3	Dynamic characteristics	
8.2.3.4	Gas permeability	
8.2.3.5	Chemical resistance	
8.3	Special Elastomers	
8.3.1	Milable urethane gum (<i>Dr. W. Kallert</i>)	
8.3.1.1	Production	
8.3.1.2	Vulcanization systems	
8.3.1.3	Particulars for processing	
8.3.1.4	Properties of the vulcanizate	
8.3.1.5	Water crosslinking	
8.3.2	Polyurethane prepregs (<i>Dr. K. Recker</i>)	
8.3.2.1	Production	
8.3.2.2	Processing of polyurethane prepregs	
8.3.2.3	Properties	
8.4	Applications for Polyurethane Elastomers (<i>H.-G. Hoppe</i>)	
8.4.1	Applications in the automobile sector	
8.4.1.1	Wheel joints, tie rod joints, axle strut joints	
8.4.1.2	Hydropneumatic suspension system	
8.4.1.3	Supplementary spring from cellular PU elastomers	
8.4.1.4	Exterior auto body parts	
8.4.1.5	Polyurethane cast tires	
8.4.2	General engineering applications	
8.4.2.1	Rollers and roll covers	
8.4.2.2	Milling rolls	
8.4.2.3	Damping elements	
8.4.2.4	Drive components	
8.4.2.5	Wear resistant elements	
8.4.2.6	Gaskets	
8.4.3	Applications in the construction industry	
8.4.3.1	Sport and track surfaces	
8.4.3.2	Terra cotta pipe seals	
8.4.3.3	Formwork mats	
8.4.4	Applications in the electrical area	
8.4.5	Applications for the shoe industry	
8.4.5.1	Shoe outside covers	
8.4.5.2	Sport shoe soles	
8.4.6	Films and tubes	
8.4.6.1	Films	
8.4.6.2	Tubes	
	Reference list for Chapter 8	
9	Determination of the Composition and Properties of Polyurethanes	
	(<i>J. Hoffmann, H. Ostromow, F. Prager, Dr. H. M. Rothermel, Dr. J. Vogel</i>)	
9.0	Introduction (<i>Dr. H. M. Rothermel</i>)	
9.1	Determination of the Chemical Composition (<i>H. Ostromow, Dr. J. Vogel</i>)	

9.1.1	Detection methods and elucidation procedures
9.1.1.1	Chemical detection methods
9.1.1.2	Thin layer chromatography
9.1.1.3	Gas chromatographic methods
9.1.1.4	Infrared spectroscopy
9.1.1.5	Nuclear magnetic resonance spectrometry
9.1.1.6	Hydrolytic methods
9.1.2	Identification of functional groups
9.1.2.1	Isocyanates
9.1.2.2	Residual NCO groups
9.1.2.3	Determination of free monomeric isocyanates
9.1.2.4	Polyesters
9.1.2.5	Polyethers
9.1.2.6	Differentiation between polyether and polyester urethanes
9.1.2.7	Chain extenders
9.1.2.8	Auxiliaries and additives
9.2	Determination of Material Properties (<i>Dr. H. M. Rothermel</i>)
9.2.1	Standardized test methods
9.2.2	Test specimen preparation
9.2.3	Determination of linear dimensions
9.2.4	Determination of density/Apparent density
9.2.5	Determination of the cell structure
9.2.6	Determination of the fraction of open and closed cells in foams
9.2.7	Determination of the mechanical properties in short term experiments
9.2.7.1	Tensile experiments
9.2.7.2	Tear experiments
9.2.7.3	Compression experiments
9.2.7.4	Hardness determination
9.2.7.5	Flexural experiments
9.2.7.6	Shear experiments
9.2.7.7	Determination of the modulus of elasticity
9.2.7.8	Short duration experiments on core compounds
9.2.7.9	Impact experiments
9.2.8	Determination of the mechanical properties in long-term experiments under static load or constant deformation
9.2.8.1	Creep experiments
9.2.8.2	Compression set/tensile set
9.2.9	Determination of the mechanical properties under periodically varying load of deformation
9.2.9.1	Dynamic fatigue experiments on rigid integral skin foams
9.2.9.2	Dynamic fatigue experiment on flexible foams
9.2.9.3	Continuous bending experiments
9.2.10	Determination of the temperature dependence of properties
9.2.10.1	Determination of thermal expansion
9.2.10.2	Determination of the temperature dependence of characteristic values
9.2.10.3	Short duration experiments at various temperatures
9.2.10.4	Determination of the softening temperature
9.2.10.5	Dimensional stability in heat and cold
9.2.10.6	Creep pressure experiments as a function of temperature
9.2.11	Investigation of aging performance

9.2.11.1	Light and weather exposure
9.2.11.2	Determination of the stability against gases, liquids, and solids
9.2.12	Determination of friction and abrasion performance
9.2.13	Determination of the thermal conductivity rating
9.2.14	Determination of water vapor permeability
9.2.15	Determination of water uptake
9.2.16	Determination of the acoustical properties
9.2.17	Determination of electrical and dielectric properties
9.3	Suitability Determination through End-Product Testing (<i>J. Hoffmann</i>)
9.3.1	Simulation of day-to-day use
9.3.2	Measurement methods for end-product testing
9.3.2.1	Dimensional stability, determination of part weights and dimensions
9.3.2.2	Mechanical requirements
9.3.3	Examples of end-product testing
9.3.3.1	Testing of PU shoe soles
9.3.3.2	Testing of automobile seats
9.3.3.3	Experiments on bumper systems of automobiles
9.3.3.4	Automobile headliners
9.3.3.5	District heating systems
9.4	Combustibility Testing and Rating (<i>F. Prager</i>)
9.4.1	Generally used laboratory procedures
9.4.2	Mining applications
9.4.3	Electric applications
9.4.4	Transportation applications area
9.4.5	Furniture and furnishing
9.4.6	Construction applications areas
9.4.6.1	Construction materials
9.4.6.2	Construction elements and special constructions
9.4.7	Other fire-related factors
	Reference list for Chapter 9

10 PU Paints and Coatings

(*Dr. H. Koch, Dr. G. Mennicken, Dr. F. Müller, Dr. H. Toepsch, Dr. H. Träubel, W. Wieczorrek*)

10.1	Paints and Coatings (<i>Dr. G. Mennicken, W. Wieczorrek</i>)
10.1.1	Solvent-containing, ambient-cure reactive coatings
10.1.1.1	Two-component PU coatings
10.1.1.2	One-component PU coating formulation
10.1.1.3	Manufacturing
10.1.1.4	Processing
10.1.1.5	Properties of the coating
10.1.1.6	Application areas
10.1.2	Solvent-borne non-reactive polyurethanes
10.1.3	Solvent-borne, air-dry coatings
10.1.4	Solvent-borne one-component stoving lacquers
10.1.5	Solvent-free paints and coatings
10.1.5.1	Two-component coating
10.1.5.2	One-component coatings, moisture curing
10.1.5.3	PU modified epoxy systems

10.1.5.4	Oven-dried, solvent-free coatings
10.1.6	PU powder coatings
10.1.7	Industrial hygiene precautions for the use of PU coatings
10.2	Polyurethanes for Textile, Paper and Leather Coating (<i>Dr. H. Träubel, Dr. H. J. Koch, Dr. H. Toepsch, Dr. F. Müller</i>)
10.2.1	Textile application
10.2.1.1	Textile treatment (sizing)
10.2.1.2	Textile coating
10.2.1.2.1	Selection of the textile substrate
10.2.1.2.2	The polymer structure of the PU-products
10.2.1.2.3	Coating processes
10.2.1.2.4	Finishing of PU-coatings
10.2.1.3	Nonwoven bonding
10.2.1.4	Poromeric-imitation leather
10.2.1.4.1	Polyaddition using dispersions
10.2.1.4.2	Polyaddition in solution
10.2.1.4.3	The use for poromeric imitation leather
10.2.2	Paper
10.2.2.1	Polyurethane ionic dispersions for paper coating
10.2.2.1.1	Properties of polyurethane films
10.2.2.1.2	Working with polyurethane dispersions
10.2.2.1.3	Applications for food packaging paper
10.2.2.1.4	Other applications of polyurethane dispersion paper coating
10.2.2.2	Polyurethane dispersions and solutions for paper sizing
10.2.3	Leather
10.2.3.1	Applications in tanning, retanning, coloring
10.2.3.2	Finishing
10.2.3.2.1	Impregnation and base coating of leather
10.2.3.2.2	Top finish
10.2.3.2.3	Patent leather
10.2.3.2.4	Foil finishing
10.2.3.3	Special processes
	Reference list for Chapter 10

11 Polyurethane Adhesives

(*Dr. M. Dollhausen*)

11.1	Introduction
11.2	Polyisocyanates
11.3	Two-Component Reaction Adhesives
11.3.1	Polyisocyanates
11.3.2	Polyols
11.3.3	Auxiliaries
11.3.4	Production and processing
11.3.5	Adhesive bonds
11.4	One-Component Reaction Adhesives
11.4.1	Isocyanate terminated polyurethanes
11.5	Solvent Adhesives
11.5.1	Hydroxyl polyurethanes
11.5.2	Auxiliaries

11.5.3 Production and processing	555
11.5.4 Adhesive bonds	556
11.6 Dispersion Adhesives	557
11.6.1 Manufacturing	557
11.6.2 Auxiliaries	558
11.6.3 Processing	558
11.6.4 Adhesive bonds	558
11.7 Application Fields	559
11.7.1 Footwear industry	559
11.7.2 Bonding of plastics	560
11.7.3 Packaging applications	561
11.7.4 Clothing industry	561
11.7.5 Automotive industry	562
11.7.6 Building industry	562
Reference list for Chapter 11	562

12 Polyurethane (PU) and Isocyanates as Binders

(<i>Dr. K. J. Krafft, Dr. R. Kubens, Dr. K. Recker, Dr. H.-D. Ruprecht, H. I. Sachs</i>)	563
12.0 Introduction (<i>Dr. K. J. Krafft</i>)	563
12.1 Bonding of Forest and Agricultural Products (<i>H. I. Sachs</i>)	564
12.1.1 The bonding of forest products	564
12.1.1.1 Manufacture	564
12.1.1.2 Properties	565
12.1.1.3 Applications	568
12.1.2 Bonding of agricultural products	569
12.1.2.1 Manufacture	569
12.1.2.2 Properties	569
12.1.2.3 Applications	570
12.2 Bonding of other Products (<i>Dr. H.-D. Ruprecht, H. I. Sachs</i>)	570
12.2.1 Rubber	570
12.2.1.1 Manufacture	570
12.2.1.2 Properties	570
12.2.1.3 Applications	570
12.2.2 Rigid polyurethane foam scrap	571
12.2.2.1 Manufacture	571
12.2.2.2 Properties	571
12.2.2.3 Applications	571
12.2.3 Inorganic products	572
12.2.3.1 Manufacture	572
12.2.3.2 Properties	572
12.2.3.3 Applications	572
12.3 Bonding of Foundry Sand (<i>Dr. R. Kubens</i>)	573
12.4 Sizings for Glass Fibers (<i>Dr. K. Recker</i>)	574
12.4.1 Manufacture	574
12.4.2 Properties	574
12.4.2.1 Processing properties	574
12.4.2.2 Properties of the glass fibers	575
12.4.2.3 Properties of the reinforced plastic	575
Reference list for Chapter 12	576

13 Polyurethane Elastomeric Fibers	
<i>(Dr. H. Gall, Dr. K.-H. Wolf)</i>	577
13.0 Introduction <i>(Dr. H. Gall)</i>	577
13.1 Synthesis of Segmented Polyurethanes <i>(Dr. K.-H. Wolf)</i>	577
13.1.1 Reactants	577
13.1.2 Reactions	578
13.1.2.1 Preparation of NCO prepolymers	578
13.1.2.2 Preparation of the elastane solution	579
13.1.2.3 Modifying reactions	579
13.1.3 Crosslinked elastanes	579
13.1.4 Additives	579
13.2 Spinning Processes <i>(Dr. K.-H. Wolf)</i>	580
13.2.1 Dry spinning procedures	580
13.2.2 Wet spinning processes	580
13.2.3 Reaction spinning methods	581
13.2.4 Miscellaneous processes	581
13.2.5 Post treatments	581
13.2.6 Compounding	581
13.3 Physical Crosslinking of Segmented Polyurea — Urethane Elastomers <i>(Dr. K.-H. Wolf)</i>	582
13.3.1 Influence of hard segments	582
13.3.2 Influence of the soft segments	582
13.4 Properties and Testing of Elastane Yarns <i>(Dr. H. Gall)</i>	583
13.4.1 Mechanical properties	584
13.4.2 Thermal behavior	584
13.4.3 Chemical characteristics	585
13.4.4 Coloration	586
13.5 Manufacture and Operations <i>(Dr. H. Gall)</i>	586
13.5.1 Types of yarn	586
13.5.2 Production and application of elastic fabrics	587
13.5.2.1 Knit fabrics	587
13.5.2.2 Woven fabrics	589
13.5.3 Dyeing and finishing	589
13.5.4 Characteristics of elastane-containing fabrics	590
Reference list for Chapter 13	590
14 Polyurethane and the Environment	
<i>(L. Abele, Dr. F.-K. Brochhagen, U. Walber)</i>	592
14.0 Introduction <i>(Dr. F.-K. Brochhagen)</i>	592
14.1 Industrial Hygiene in Manufacturing and Processing <i>(U. Walber)</i>	593
14.1.1 Regulations and guidelines	593
14.1.2 Protective measures at the workplace	593
14.1.2.1 Solvent-free raw material systems — stationary processing	595
14.1.2.2 Solvent-free raw material systems — non-stationary processing	598
14.1.2.3 Processing solvent-containing systems	598
14.1.2.4 Processing polyurethanes	599
14.2 Ecology of Polyurethanes <i>(L. Abele)</i>	599
14.2.1 Emission into the atmosphere	599
14.2.2 Liquid and solid raw materials	600

14.2.3 Polyurethanes as waste product	601
14.2.3.1 Dumping	602
14.2.3.2 Incineration	602
14.2.3.3 Recycling	602
14.3 Polyurethanes as Foodstuffs-Commodities (<i>Dr. F.-K. Brochhagen</i>)	603
14.4 Flammability and Flammability Risk (<i>Dr. F.-K. Brochhagen</i>)	603
14.4.1 Flammability risks in production and storage	604
14.4.2 Flammability risks in the application	604
14.4.2.1 Polyurethane flexible foam in furniture and mattresses	604
14.4.2.2 Polyurethane foam in the transportation sector	605
14.4.2.3 Polyurethane in the building sector	605
14.4.3 Side effects of combustion	606
Reference list for Chapter 14	606
15 Commercial Products	
(<i>Dr. K. Uhlig</i>)	608
Index	619
