Handbook of Machine Tools

Volume 3

Automation and Controls

Manfred Weck
Lehrstuhl für Werkzeugmaschinen
Laboratorium für Werkzeugmaschinen und Betriebslehre
Aachen, Germany

Translated from the original German by
H. BIBRING
Senior Lecturer, Middlesex Polytechnic
London, U.K.

A Wiley Heyden Publication

JOHN WILEY & SONS
Chichester · New York · Brisbane · Toronto · Singapore

Title of German edition:
Werkzeugmaschinen, Band 3
Automatisierung und Steuerungstechnik
von Prof. Dr.-Ing. Manfred Weck
Laboratorium für Werkzeugmaschinen und Betriebslehre
der Rheinisch-Westfälischen Technischen Hochschule, Aachen
Zweite, neubearbeitete Auflage

© VDI-Verlag GmbH, Düsseldorf, 1980

Library of Congress Cataloging in Publication Data

Weck, Manfred, 1937–
Handbook of machine tools.

Translation of: Werkzeugmaschinen.
'A Wiley–Heyden publication.'
Includes bibliographies and indexes.
Contents: v. 1. Types of machines, forms of construction, and applications—v. 2. Construction and mathematical analysis—v. 3. Automation and controls—[etc.]
1. Machine-tools. I. Title.
TJ1185.W382313 1984 621.9'02 83-23483
ISBN 0 471 26226 9 (set)
ISBN 0 471 26224 2 (vol. 3)

British Library Cataloguing in Publication Data

Weck, Manfred
Handbook of machine tools.—(A Wiley Heyden publication)
Vol. 3: Automation and control
1. Machine-tools
I. Title II. Werkzeugmaschinen. Bd. 3
Automatisierung und Steuerungstechnik. *English*

ISBN 0 471 26226 9 (set)
ISBN 0 471 26224 2 (vol. 3)

Set in VIP Times by Preface Ltd, Salisbury, Wilts.
and printed in Great Britain by Page Brothers (Norwich) Ltd

CONTENTS

Foreword xiii

Preface xv

Nomenclature and Abbreviations xvii

1 Introduction 1
1.1 Definitions of terms 1
1.2 Historical development and reasons for the automation of machine tools 2

2 Automated Functions in Manufacturing Engineering and their Practical Applications 5
2.1 Control of the functions cycle 6
2.1.1 Operating sequence 6
2.1.2 Elements of a control unit 8
2.1.3 Storage of function sequences 9
2.2 Examples of automated functions 10
2.2.1 Storage of displacement information and switching functions 10
2.2.2 Rotational speed changes 11
2.2.3 Workpiece handling 12
2.2.4 Tool handling 17
2.2.5 Continuous process inspection and correction . 17
2.2.6 Diagnostics 21
2.2.7 Services 24

3 Mechanical Control 26
3.1 Examples of actual mechanical controls 26
3.1.1 Single-spindle automatic screw machines . . 26
3.1.2 Multi-spindle automatics 31
3.2 Cam-profile calculations 35

4 Copying Systems 40
4.1 Single- and double-axis copying units 41
4.2 Discontinuous copying systems 43

4.3 Continuous copying systems 45
4.3.1 Electric continuous copying units . . . 45
4.3.2 Electrohydraulic continuous copying systems . 48
4.3.3 Hydraulic continuous copying systems . . 49
4.3.3.1 Static and dynamic behaviour of hydraulic copying units . . . 52
4.3.3.2 Copying errors 53
4.3.3.3 Static characteristics 54
4.3.3.4 Dynamic characteristics . . . 57

5 Electronic Data Processing 62
5.1 Fundamentals 62
5.1.1 Number systems 62
5.1.2 Data codes 66
5.1.3 Boolean algebra 68
5.1.4 Karnaugh maps 73
5.2 Data-processing devices and components . . . 75
5.2.1 Realization of the basic functions . . . 75
5.2.2 Complex functions 77
5.2.2.1 Flip-flop 77
5.2.2.2 The 1:2 scaler 78
5.2.2.3 Binary counter 79
5.2.2.4 Half adder 80
5.2.2.5 Full adder 80
5.2.2.6 Comparator 81
5.2.2.7 Decoder 81
5.2.2.8 Parity check 82
5.2.3 Operating and indicator units, signal generators . 83
5.3 Computers 86
5.3.1 Analogue computers 87
5.3.2 Digital computers 88
5.3.2.1 Construction and function . . . 89
5.3.2.2 Peripherals 93
5.3.2.3 User software 95

6 Process Controls 98
6.1 Logic switching controls 98
6.2 Sequence controls 100
6.3 Types of construction 101
6.3.1 Hard-wire programmed controls . . . 103
6.3.2 Plug-board controls 107
6.3.3 Process computer controls 111
6.3.3.1 Micro-processor units (MPU) . . 113
6.3.3.2 Micro-computer on a single chip . . 115
6.3.4 Symbol-programmable controls 116

6.3.4.1 Construction and operation . . 117
6.3.4.2 Programming 117
6.3.4.3 Application aspects 122

7 Numerical Control 126
7.1 General description of the function of numerical controls . 126
7.2 NC programming and machine operation . . . 129
7.2.1 Structure of a NC program 129
7.2.2 Co-ordinate systems and datum points . . 134
7.2.3 Manual programming 137
7.2.3.1 Fundamentals and procedures . . 137
7.2.3.2 Programming example . . . 139
7.2.4 Automatic programming 140
7.2.4.1 The EXAPT system 142
7.2.4.2 Programming example . . . 144
7.2.5 Cost comparisons of programming techniques . 147
7.2.6 Operation of NC machines 148
7.3 Types of numerical control designs 151
7.3.1 Conventionally programmed controls (NC) . 151
7.3.2 Stored-program numerical controls (CNC) . . 153
7.3.3 Manual-input controls 155
7.4 Range of functions for numerical controls . . . 156
7.4.1 Operating and program-input functions . . 157
7.4.2 Auxiliary functions of numerical controls . . 160
7.5 Trends in the development of NC units 162
7.5.1 Decentralized construction of numerical controls . 163
7.5.2 Multi-processor controls 164

8 Geometry Processing 166
8.1 Interpolation 166
8.1.1 Types of interpolation 167
8.1.2 Interpolation techniques 168
8.1.2.1 Single-stage and fine interpolation techniques 168
8.1.2.2 Two-stage interpolation techniques and rough interpolation methods . . 181
8.2 Correction techniques 185
8.3 External influences on velocity and feed-rate override . 186
8.4 Error-compensation techniques 187
8.5 Datum point shift 188

9 Feed-drives 189
9.1 Basic construction of feed-drives 189
9.2 Linear, time-continuous transmission systems . . . 194
9.2.1 Fundamental control technology for linear time-continuous transmission systems 194

9.2.1.1 The time relationship of control loop components 194
9.2.1.2 Basic systems of control loop components and their representation . 202
9.2.1.3 Construction of a control loop . . 204
9.2.1.4 The signal flow diagram (block circuit diagram) 205
9.2.1.5 Stability of control loops . . . 207
9.2.1.6 Methods for finding setting values for analogue controllers 209
9.2.2 Simulation on an analogue computer . . . 211
9.2.3 Simulation on a digital computer . . . 212
9.2.4 Construction and method of operation of the feed drive as a continuous position control loop . . 214
9.2.5 Calculations for time-continuous control loops . 215
9.2.6 Transmission ratio of a linear position control loop 218
9.2.7 Path generation with position control loops (workpiece error) 221
9.3 Linear time-discrete transmission systems . . . 223
9.3.1 Fundamental control technology for time-discrete systems 223
9.3.1.1 Representation of time-discrete systems 223
9.3.1.2 Time-discrete controller (differential equations) 225
9.3.1.3 The z-transform 228
9.3.1.4 The z-transfer function . . . 231
9.3.1.5 The inverse z-transfer function . . 236
9.3.2 Stability analysis of time-discrete position controls 236
9.3.3 Status control 239
9.4 Power units for feed-drives 243
9.4.1 Requirements of power units 243
9.4.2 Electrical power units 243
9.4.2.1 DC motors 243
9.4.2.2 Three-phase AC motors . . . 246
9.4.2.3 Power amplifiers 249
9.4.2.4 Linear motors 252
9.4.2.5 Electric stepping motors . . . 253
9.4.3 Hydraulic drive units 262
9.4.3.1 Piston–cylinder drives . . . 263
9.4.3.2 Hydraulic motors 265
9.4.3.3 Servo-valves 267
9.4.3.4 The system: hydraulic motor/servo-valve 270

9.4.3.5 The electrohydraulic drive as a control loop 272
9.4.4 Comparison of DC, stepping and hydraulic motors 272
9.5 Mechanical transmission elements for feed-drives . . 275
9.5.1 The transmission behaviour 276
9.5.2 Suggestions for the design of feed-drives . . 279
9.5.3 Design examples 282
9.5.3.1 Feed-shafts 282
9.5.3.2 Feed-shaft (lead-screw) bearings . 284
9.5.3.3 Gear boxes for feed-drives . . . 285

10 Position Measuring Systems for NC Machines 291
10.1 Fundamentals of linear and angular measurement . . 291
10.1.1 Basic definitions 291
10.1.2 Measurement principles and techniques . . 292
10.1.2.1 Direct and indirect determination of the measured value 292
10.1.2.2 Analogue and digital determination of the measured variable 292
10.1.2.3 Relative and absolute determination of the measured variable 294
10.2 Analogue measuring systems 296
10.2.1 Resistance transducers 296
10.2.2 Electromagnetic transducers 298
10.2.2.1 Inductosyns 298
10.2.2.2 Resolvers 301
10.3 Digital measuring systems 303
10.3.1 Photoelectric scanning techniques . . . 303
10.3.2 Digital-incremental measuring systems . . 304
10.3.3 Digital-absolute measuring systems . . . 307
10.4 Interferometry displacement measurement . . . 310
10.4.1 Michelson interferometer 310
10.4.2 Double-frequency laser interferometer . . 311

11 Adaptive Control Systems 315
11.1 Fundamentals and aims 315
11.2 Adaptive control for turning 318
11.2.1 Power control 319
11.2.1.1 The cutting process as a control loop . 319
11.2.1.2 Torque and cutting force sensors . 320
11.2.1.3 Power control loop 322
11.2.2 Automatic cut segmentation for turning operations 324
11.2.2.1 Objectives 324

11.2.2.2 Requirements of controls and tool . 326
11.2.2.3 Operating sequence and strategy for automatic cut segmentation . . 327
11.2.2.4 Travel at a rapid feed rate for idle movements 330
11.3 Adaptive control for milling 331
11.3.1 Power controls 334
11.3.2 Automatic chatter elimination 338
11.3.3 Automatic cut segmentation 343
11.3.4 Special sensors for milling 345
11.4 Adaptive control for grinding 348
11.5 Adaptive control for electrodischarge machining . . 350
11.6 Geometric adaptive control systems 355

12 DNC Systems 360
12.1 Functions of DNC systems 362
12.1.1 Basic functions 363
12.1.2 Extended functions 365
12.2 Information flow in DNC systems 365
12.3 Software compilation 369
12.4 Hardware construction 370
12.5 Stages in construction of computer-controlled production installations 374

13 Flexible Manufacturing Systems (FMS) 376
13.1 Flexible manufacturing systems within the framework of process data processing 376
13.2 Definition of terms and classification 377
13.3 Range of application for automated production installations 379
13.4 Material and information flow in flexible manufacturing systems 380
13.5 Functions of flexible manufacturing systems . . . 381
13.5.1 Information processing 381
13.5.2 Loading and handling of tool and workpiece . 383
13.6 Layout and construction of flexible manufacturing systems 384
13.7 Existing operational and planned systems . . . 388
13.7.1 Flexible manufacturing systems for non-circular workpieces 388
13.7.2 Flexible manufacturing systems for circular/symmetrical workpieces 393
13.7.3 Flexible manufacturing systems in German Institutions of Higher Education . . . 396
13.8 Summary and outlook for the future 400

14 Operational Data Recording 402
14.1 Classification of operational data and definition of terms . 402
14.2 Operational data-recording systems 404
14.3 Operational data recording and production supervision in DNC systems 407

15 Machine Diagnostics in Automatic Production 409
15.1 Objectives of machine diagnostics 409
15.1.1 Influences upon the functioning of the means of production and the quality of the product . . 410
15.1.2 Economic considerations of monitoring and diagnostics 412
15.1.3 Aims of monitoring and diagnostics 413
15.2 Monitoring strategies 415
15.3 Examples of monitoring and diagnosis 417
15.3.1 General function testing at the start of a shift . 417
15.3.2 Optical examination of unmachined workpieces (part of process diagnosis) 418
15.3.3 Continuous process monitoring 419
15.3.4 Tool and machine monitoring by taught sample recognition 421
15.3.5 Periodic engagement of measurement probes . 423
15.3.6 Temperature compensation 424
15.3.7 Diagnosis on demand 424
15.3.8 Tachograph recorder 426
15.3.9 Biannual and annual machine diagnosis . . 427
15.4 Control structures for machine diagnosis . . . 429
15.4.1 Diagnosis with CNC and memory-stored program controls 429
15.4.2 Diagnosis without CNC and memory-stored program control 433
15.5 Utilization of diagnostic results 434
