<i>Preface</i>	<i>xxi</i>
<b>Part I Advances in wool fibre and fabric production</b>	
1 Improvement of wool production through genetic manipulation	3
G. E. ROGERS, The University of Adelaide, Australia; and C. S. BAWDEN, South Australian Research and Development Institute, Australia	
1.1 Introduction	3
1.2 The techniques of genetic manipulation for animals	4
1.3 What aspects of wool production might be amenable to genetic manipulation?	5
1.4 Increasing the yield of wool per animal	6
1.5 How might wool quality be modified by affecting fibre molecular structure?	10
1.6 Some other aspects of wool production that could be achieved by transgenesis	17
1.7 Conclusion and future trends	19
1.8 References	19
2 The objective measurement of wool fibre quality	22
P. SOMMERVILLE, Formerly Corporate Development Manager, Australian Wool Testing Authority Ltd, Australia	
2.1 Introduction	22
2.2 Definitions	23
2.3 Principles of wool metrology	23
2.4 Applications of wool metrology	23

2.5	Statistical methods in wool metrology	26
2.6	Development of wool measurement systems	30
2.7	Standardisation of measurement systems	31
2.8	Application of commercial regulations	35
2.9	Advances in the measurement of wool	35
2.10	Latest developments in wool metrology	55
2.11	Future trends	57
2.12	Sources of further information and advice	58
2.13	References	59
3	Wool as a natural renewable fibre	61
	I. M. RUSSELL, CSIRO Materials Science and Engineering, Australia	
3.1	Introduction	61
3.2	The environmentally aware retailer and consumer	62
3.3	The growing importance of European legislation	63
3.4	Environmental claims	65
3.5	EU eco-label processing in practice	77
3.6	Future trends	82
3.7	Sources of further information and advice	83
3.8	References	83
4	Advances in wool spinning technology	86
	M. W. PRINS, CSIRO Materials Science and Engineering, Australia	
4.1	Introduction	86
4.2	Brief review of advances in topmaking	87
4.3	Yarnspec™: predicting spinning performance	90
4.4	Worsted spinning	91
4.5	Future trends	100
4.6	Sources of further information and advice	104
4.7	Acknowledgements	104
4.8	References	104
5	Advances in wool weaving and knitting	106
	S. GUPTA, National Institute of Fashion Technology, India	
5.1	Introduction	106
5.2	Advances in yarn preparation	107
5.3	Warp preparation	107
5.4	Advances, benefits and applications of new weaving technologies	113
5.5	Advances, benefits and applications of new knitting technologies	119
5.6	Future trends	127
5.7	Sources of further information and advice	128
5.8	Further reading	128

6	Advances in the manufacture of nonwoven wool N. FINN and R. WOOD, CSIRO Materials Science and Engineering, Australia	130
6.1	Introduction	130
6.2	Nonwoven processes and recent innovations	131
6.3	Bonding systems	137
6.4	Finishing	145
6.5	Future trends	145
6.6	Sources of further information and advice	145
6.7	Acknowledgement	146
7	Wool finishing and the development of novel finishes J. SHEN, De Montfort University, UK	147
7.1	Introduction	147
7.2	Dimensional stability and shrink-resist finishing for machine-washable wool	148
7.3	Stain-repellent and stain-release finishing	158
7.4	Insect-resist and insect-repellent treatments	161
7.5	Flame-retardant finishing	165
7.6	Enzyme applications in wool finishing	167
7.7	Future trends	176
7.8	Acknowledgements	177
7.9	References	177
8	The coloration of wool D. M. LEWIS, The University of Leeds, UK	183
8.1	Introduction	183
8.2	The theoretical basis of wool dyeing	184
8.3	Environmental impact of wool coloration processes	191
8.4	Reactive dyes for wool	198
8.5	Wool protection during dyeing by using reactive dyes and/or anti-setting agents	200
8.6	Ink-jet printing of wool fabrics	207
8.7	References	209
<b>Part II New wool products and applications</b>		
9	Improving the whiteness and photostability of wool K. R. MILLINGTON, CSIRO Materials Science and Engineering, Australia	217
9.1	Introduction	217

9.2	Wool colour	218
9.3	The effect of wool processing on colour	222
9.4	The chemistry of wool colour and photostability	226
9.5	Methods for improving the whiteness and photostability of wool	239
9.6	Future trends	241
9.7	Sources of further information and advice	243
9.8	References	244
10	Enhancing wool products using nanotechnology R. DENNING, CSIRO Materials Science and Engineering, Australia	248
10.1	Introduction	248
10.2	Nanotechnology application to wool	256
10.3	Current commercial applications of nanotechnology to wool	260
10.4	Future trends	261
10.5	Sources of further information and advice	261
10.6	References	262
11	Wool performance apparel for sport B. HOLCOMBE, University of Wollongong, Australia	265
11.1	Introduction	265
11.2	The human system	266
11.3	Textile properties relevant to sports apparel	269
11.4	Textiles for sports apparel	277
11.5	The Sportwool™ concept	279
11.6	Future trends	280
11.7	The role for wool	282
11.8	References	283
12	High-performance wool blends M. MIAO, CSIRO Materials Science and Engineering, Australia	284
12.1	Introduction	284
12.2	Wool blend products, their benefits and applications	285
12.3	Processing systems for wool blend yarns	296
12.4	Spinning wool blend on the long staple worsted system	297
12.5	Processing wool and wool blend on the cotton spinning system	298
12.6	Wool-filament composite yarns	301
12.7	References	304

13	Intelligent wool apparel S. R. COLLIE, AgResearch Limited, New Zealand	308
13.1	Introduction	308
13.2	Definitions and categories of smart textiles	308
13.3	Wool's intrinsic 'smartness'	310
13.4	Current applications of wool in intelligent textiles	311
13.5	Opportunities for the use of wool in intelligent textiles	319
13.6	References	319
14	Application of wool keratins ranging from industrial materials to medical devices R. KELLY, RJK Developments Limited, New Zealand	323
14.1	Introduction	323
14.2	Overview of the structure and characteristics of keratin protein	324
14.3	Extraction of keratin from wool for new product development	325
14.4	Industrial trends relating to sustainable polymers	326
14.5	Advanced applications of wool keratins	326
14.6	Future trends	329
14.7	Sources of further information and advice	329
14.8	References	329
