PREFACE xi

## CHAPTER 1

**Introduction: How Much Do I Need to Learn about Rheology?** 1

- 1.1 Shear-Thinning and Shear Thickening 2
- 1.2 Yield Stress 4
- 1.3 Elastic/Viscoelastic Effects 5
  - 1.3.1 The Weissenberg Effect 5
  - 1.3.2 Fluid Memory 6
  - 1.3.3 Die Swell 7
- 1.4 Rheology as Spectroscopy 8
- 1.5 Process Modeling 9

## CHAPTER 2

**Vector and Tensor Operations** 12

- 2.1 Scalars 13
- 2.2 Vectors 14
  - 2.2.1 Vector Rules of Algebra 15
    - 2.2.1.1 *Coordinate Systems* 17
    - 2.2.1.2 *Vector Addition* 22
    - 2.2.1.3 *Vector Dot Product* 24
    - 2.2.1.4 *Vector Cross Product* 27
  - 2.2.2 Vector Einstein Notation 28
- 2.3 Tensors 30
  - 2.3.1 Tensor Rules of Algebra 30
    - 2.3.1.1 *Tensor Addition* 31
    - 2.3.1.2 *Tensor Dot Product* 32
    - 2.3.1.3 *Tensor Scalar Product* 34
  - 2.3.2 Tensor Einstein Notation 34

2.3.3	Linear Vector Functions	37
2.3.4	Associated Definitions	38
2.4	Differential Operations with Vectors and Tensors	42
2.5	Curvilinear Coordinates	48
2.5.1	Cylindrical Coordinate System	49
2.5.2	Spherical Coordinate System	52
2.6	Vector and Tensor Integral Theorems	53
2.6.1	Gauss–Ostrogradskii Divergence Theorem	53
2.6.2	Leibnitz Formula	54
2.6.3	Substantial Derivative	55
2.7	Problems	56

### CHAPTER 3

#### **Newtonian Fluid Mechanics** 59

3.1	Conservation of Mass	59
3.2	Conservation of Momentum	62
3.2.1	Momentum Flux by Convection	64
3.2.2	Momentum Flux by Molecular Forces	64
3.2.3	Momentum Flux by Body Forces	70
3.2.4	Equation of Motion	70
3.3	Newtonian Constitutive Equation	72
3.3.1	Compressible Fluids	73
3.3.2	Incompressible Fluids	75
3.4	Navier–Stokes Equation	75
3.5	Flow Problems: Incompressible Newtonian Fluids	77
3.5.1	Drag Flow between Infinite Parallel Plates	77
3.5.2	Poiseuille Flow between Infinite Parallel Plates	84
3.5.3	Poiseuille Flow in a Tube	89
3.5.4	Torsional Flow between Parallel Plates	94
3.6	Problems	98

### CHAPTER 4

#### **Standard Flows for Rheology** 105

4.1	Introduction	105
4.2	Simple Shear Flow	106
4.3	Simple Shear-Free (Elongational) Flows	112
4.3.1	Uniaxial Elongational Flow	113
4.3.2	Biaxial Stretching Flow	119
4.3.3	Planar Elongational Flow	121
4.4	Forms of the Stress Tensor in Standard Flows	122
4.4.1	Simple Shear Flow	122
4.4.2	Elongational Flow	125
4.5	Measuring Stresses in Standard Flows	126
4.6	Problems	128

**CHAPTER 5****Material Functions 131**

- 5.1 Introduction and Definitions 132
- 5.2 Shear Flow 134
  - 5.2.1 Steady Shear 134
  - 5.2.2 Unsteady Shear 136
    - 5.2.2.1 *Shear-Stress Growth* 137
    - 5.2.2.2 *Shear-Stress Decay* 140
    - 5.2.2.3 *Shear Creep* 141
    - 5.2.2.4 *Step Shear Strain* 150
    - 5.2.2.5 *Small-Amplitude Oscillatory Shear* 153
    - 5.2.2.6 *Small-Amplitude Oscillatory Shear—Complex Notation* 156
- 5.3 Elongational Flow 159
  - 5.3.1 Steady Elongation 159
  - 5.3.2 Unsteady Elongation 162
    - 5.3.2.1 *Elongational Stress Growth* 162
    - 5.3.2.2 *Elongational Creep* 162
    - 5.3.2.3 *Step Elongational Strain* 163
    - 5.3.2.4 *Small-Amplitude Oscillatory Elongation* 164
- 5.4 Problems 166

**CHAPTER 6****Experimental Data 169**

- 6.1 Steady Shear Flow 169
  - 6.1.1 General Effects—Linear Polymers 169
  - 6.1.2 Limits on Measurements—Instability 171
  - 6.1.3 Material Effects 174
    - 6.1.3.1 *Molecular Weight and Molecular-Weight Distribution* 174
    - 6.1.3.2 *Chain Architecture* 176
    - 6.1.3.3 *Mixtures and Copolymers* 181
  - 6.1.4 Temperature and Pressure Effects 188
- 6.2 Unsteady Shear Flow 190
  - 6.2.1 Small-Strain Unsteady Shear Flow—SAOS and Step Strain 190
    - 6.2.1.1 *General Effects—Linear Polymers* 191
    - 6.2.1.2 *Material Effects* 193
    - 6.2.1.3 *Temperature Effects—Time-Temperature Superposition* 197
  - 6.2.2 Large-Strain Unsteady Shear Flow 206
- 6.3 Steady Elongational Flow 214
- 6.4 Unsteady Elongational Flow 215
  - 6.4.1 Small-Strain Unsteady Elongational Flow 215
  - 6.4.2 Large-Strain Unsteady Elongational Flow 216
- 6.5 Summary 222
- 6.6 Problems 222

## CHAPTER 7

**No Memory: Generalized Newtonian Fluids** 225

- 7.1 Constitutive Constraints 225
- 7.2 GNF Constitutive Equation 228
  - 7.2.1 Power-Law Model 229
  - 7.2.2 Carreau–Yasuda Model 231
  - 7.2.3 Bingham Model 232
- 7.3 Material Function Predictions 232
- 7.4 Flow Problems: Power-Law Generalized Newtonian Fluid 236
  - 7.4.1 Pressure-Driven Flow in a Tube 236
  - 7.4.2 Combined Drag and Poiseuille Flow through a Slit 242
- 7.5 Limitations on GNF Models 247
- 7.6 Problems 250

## CHAPTER 8

**Memory Effects: Generalized Linear Viscoelastic Fluids** 257

- 8.1 Memory Effects 257
- 8.2 The Maxwell Models 263
  - 8.2.1 Simple Maxwell Model 263
  - 8.2.2 Generalized Maxwell Model 274
- 8.3 GLVE Constitutive Equation 277
- 8.4 Flow Problems: GLVE Fluid 285
  - 8.4.1 Poiseuille Flow of a GLVE Fluid 285
  - 8.4.2 Torsional Oscillatory Viscometer, Part I: Calculation of the Velocity Profile 288
  - 8.4.3 Torsional Oscillatory Viscometer, Part II: Measurement of SAOS Material Functions 288
- 8.5 Limitations of the GLVE Model 295
- 8.6 Problems 300

## CHAPTER 9

**Introduction to More Advanced Constitutive Modeling** 305

- 9.1 Finite Strain Measures 305
  - 9.1.1 Deformation Gradient Tensor 309
  - 9.1.2 Finger and Cauchy Tensors 313
- 9.2 Lodge Equation 327
  - 9.2.1 Integral Form of the Lodge Equation 327
  - 9.2.2 Differential Lodge Equation—Upper Convected Maxwell Model 336
  - 9.2.3 Other Lodge-like Equations 337
- 9.3 Convected Derivatives 338
  - 9.3.1 Nonorthonormal Bases 339
    - 9.3.2 Convected Coordinates 341
      - 9.3.2.1 Deformation 346
      - 9.3.2.2 Stress 347

- 9.3.3 Relation to Cartesian Coordinates 349
- 9.3.4 Other Convected Derivatives 353
- 9.4 Other Constitutive Approaches 355
  - 9.4.1 Continuum Approach 355
    - 9.4.1.1 *Linear and Quasi-Linear Models* 356
    - 9.4.1.2 *Nonlinear Differential Constitutive Models* 360
    - 9.4.1.3 *Integral Models with Nonlinearity* 364
  - 9.4.2 Molecular Approach—Polymeric Constitutive Models 365
    - 9.4.2.1 *Probabilistic Approach—Configuration Distribution Function* 366
    - 9.4.2.2 *Elastic Solids—Rubber-Elasticity Theory* 370
    - 9.4.2.3 *Polymer Melts—Temporary Network Model* 372
    - 9.4.2.4 *Polymer Melts—Reptation Theories* 375
    - 9.4.2.5 *Polymer Solutions—Elastic Dumbbell Model* 376
- 9.5 Problems 378

## CHAPTER 10

### Rheometry 382

- 10.1 Shear Flow 383
  - 10.1.1 Capillary Flow 383
    - 10.1.1.1 *Shear Stress in Capillary Flow* 384
    - 10.1.1.2 *Shear Rate in Capillary Flow* 387
    - 10.1.1.3 *Entrance and Exit Effects—Bagley Correction* 393
    - 10.1.1.4 *Wall Slip* 394
  - 10.1.2 Drag Flow—Parallel Disks 397
  - 10.1.3 Drag Flow—Cone and Plate 401
  - 10.1.4 Drag Flow—Couette 405
- 10.2 Elongational Flows 409
  - 10.2.1 Uniaxial Extension 411
    - 10.2.1.1 *Melt Stretching* 411
    - 10.2.1.2 *Filament Stretching—Sridhar's Apparatus* 413
  - 10.2.2 Biaxial and Planar Extension 415
    - 10.2.2.1 *Meissner's Apparatus* 415
    - 10.2.2.2 *Lubricated Squeezing* 416
    - 10.2.2.3 *Stagnation Flows* 418
    - 10.2.2.4 *Contraction Flow—Cogswell and Binding Analyses* 418
- 10.3 Flow Birefringence 422
  - 10.3.1 Introduction 423
  - 10.3.2 Stress-Optical Law 426
  - 10.3.3 Elongational Flow 429
  - 10.3.4 Shear Flow 429
- 10.4 Summary 434
- 10.5 Problems 434

**APPENDIX A**

**Nomenclature** 438

**APPENDIX B**

**Glossary** 447

**APPENDIX C**

**Mathematics** 460

C.1 Math Hints 460

C.1.1 Solving PDEs by Similarity Transformation 460

C.1.2 Miscellaneous Math Hints 463

C.2 Differential Operations in Curvilinear Coordinates 464

C.3 Projection of a Plane 469

C.4 Finite Deformation Tensors in Curvilinear Coordinates 470

C.4.1 Cylindrical Coordinates 470

C.4.2 Spherical Coordinates 471

C.5 Coordinate Transformations of Orthonormal Bases 471

C.6 Finding Principal Values 474

C.7 Contravariant and Covariant Transformations of Tensors 478

C.7.1 Contravariant Tensors 479

C.7.2 Covariant Tensors 483

C.8 Problems—Mathematics Appendix 487

**APPENDIX D**

**Predictions of Constitutive Equations** 489

**APPENDIX E**

**Optics of Birefringence** 495

E.1 Light in a Vacuum 495

E.2 Light in an Isotropic Medium 496

E.3 Light in an Anisotropic Medium 499

E.3.1 General Wave Equation 499

E.3.2 Harmonic Waves 501

E.3.2.1 Travel along an Optic Axis 502

E.3.2.2 Travel along a Principal Direction 505

E.3.2.3 Travel in an Arbitrary Direction 507

E.4 Summary 517

E.5 Problems 517

**APPENDIX F**

**Data for Problems and Examples** 519

**REFERENCES** 523

**INDEX** 538

# Index

**Note:** Page numbers followed by "n." indicate footnotes.

- Addition
  - of tensors, 30–32
  - of vectors, 22–24
- Affine deformation of solid rubber, 372
- Affine motion, 370
- Anisotropic media
  - light in
    - general wave equation, 499–501
    - harmonic waves, 501–17
    - polarization of, 423
- Antisymmetric tensors, 39–40
- Apparent shear rate, 456–57
- Apparent viscosity, 458–59
- Arrhenius equation, 201
- Asymmetric del (nabla) operator, 151, 448–49
- Bagley correction, 393–94
- Bases
  - metric coefficients of, 340, 455
  - metric of, 343
  - nonorthonormal, 339–41
  - orthonormal, transformations of, 471–74
- Basis vectors, 18–19
  - orthonormal, 455
  - reciprocal, 340–41
- Biaxial and planar elongational flow
  - contraction flow—Cogswell and Binding analyses, 418–21
  - lubricated squeezing, 416–17
  - Meissner's apparatus, 415–16, 417
  - stagnation flows, 418
- Biaxial elongational stress growth coefficient, 162
- Biaxial elongational viscosity, 160
- Biaxial step elongational relaxation modulus, 164
- Biaxial stretching flow, 119–21
- Binding analysis, 418–21
- Bingham model, 232
- Birefringence, definition of, 424. *See also* Flow birefringence; Optics of birefringence
- Boger fluids, 170, 447
- Boundary conditions in fluid mechanics, 83–84
- Brookfield viscometer, 2
- Cannon-Fenske viscometer, 2
- Capillary flow
  - entrance and exit effects—
    - Bagley correction, 393–94
  - introduction to, 383–84
  - shear rate in, 387–92
  - shear stress in, 384–87
  - wall slip, 394–97
- Carreau-Yasuda model, 231–32
- Cartesian coordinates
  - continuity equation in, 467
  - del (nabla) operator in, 43
  - equation of motion (EOM) in, 467, 468
  - examples, 20–22
  - introduction to, 18–19
  - Navier-Stokes equation in, 468
  - relation of convected derivatives to, 349–53
- Cauchy-Green stretch tensors, 315, 447
- Cauchy-Maxwell equation, 337, 491
- Cauchy tensor, 313–27
- Cayley-Hamilton theorem, 447
- Chain architecture, 176–81
- Cogswell analysis, 418–21
- Cole-Cole plot, 447
- Compliance, recoverable, 147
- Compressible fluids, constitutive equation for, 73–75
- Condition of coaxiality, 427
- Cone and plate drag flow, 401–5
- Configuration distribution function, 366–70
- Conservation of mass, 59–62
- Conservation of momentum
  - equation of motion, 70–72
  - introduction to, 62–63
  - microscopic, 75
  - momentum flux by body forces, 70
  - momentum flux by convection, 64
  - momentum flux by molecular forces, 64–70
- Conservative forces, 447–48
- Consistency index, 230
- Constitutive constraints for generalized Newtonian Fluids (GNF), 225–28
- Constitutive equations. *See also* Convected derivatives; Finite strain measures; Lodge equation
  - for compressible fluids, 73–75
  - continuum approach
    - integral models with nonlinearity, 364–65
    - introduction to, 355–56
    - linear and quasi-linear models, 356–60
    - nonlinear differential constitutive models, 360–64
  - Doi-Edwards, 375–76

- GLVE model, 277–85  
GNF  
  Bingham model, 232  
  Carreau-Yasuda model, 231–32  
  introduction to, 228–29  
  power-law (Ostwald-de Waele) model, 229–31  
for incompressible fluids, 75  
introduction to, 72–73  
memory effects and, 257–63.  
  *See also* Generalized linear viscoelastic (GLVE) model; Maxwell models  
molecular approach—polymeric constitutive models  
  elastic solids—rubber-elasticity theory, 370–72  
  introduction to, 365–66  
  polymer melts—reptation theories, 375–76  
  polymer melts—temporary network model, 372–74  
  polymer solutions—elastic dumbbell model, 376–78  
  probabilistic approach—configuration distribution function, 366–70  
  Newtonian, 131, 169, 225  
  non-Newtonian, 131–32, 356  
  second-order fluid equation, 456  
  separable, 278  
  stress, 73  
Continuity  
  stress, 83  
  velocity, 83–84  
Continuity equation  
  for mass, 62  
  in three coordinate systems, 467  
Contraction flow, 418–21  
Contravariant coefficients of tensors, 348  
Contravariant components of tensors and vectors, 344, 448  
Contravariant metric coefficients of vectors, 344  
Contravariant transformations of tensors, 479–83  
Convected coordinates  
  deformation, 346–47  
  introduction to, 341–46  
  stress, 347–48  
Convected derivatives  
  convected coordinates  
    deformation, 346–47  
    introduction to, 341–46  
    stress, 347–48  
  introduction to, 338–39  
  lower, 353–54  
  nonorthonormal bases, 339–41  
  other, 353–55  
    relation to Cartesian coordinates, 349–53  
    upper, 354  
Coordinates  
  basis vectors for, 18–19  
  Cartesian  
    continuity equation in, 467  
    del (nabla) operator in, 43  
    equation of motion (EOM) in, 467, 468  
    examples, 20–22  
    introduction to, 18–19  
    Navier-Stokes equation in, 468  
    relation of convected derivatives to, 349–53  
  convected  
    deformation, 346–47  
    introduction to, 341–46  
    stress, 347–48  
  curvilinear. *See also* Cylindrical coordinates; Spherical coordinates  
    differential operations in, 464–66  
    finite deformation tensors in, 470–71  
    introduction to, 48–49  
  cylindrical, 49–52  
    continuity equation in, 467  
    differential operations in, 464–65  
    equation of motion (EOM) in, 467, 468  
    finite deformation tensors in, 470–71  
    introduction to, 48–49  
    Navier-Stokes equation in, 468  
  examples for Cartesian coordinates, 20–22  
  introduction to, 17–18  
  right-handed, 16  
  spherical, 49, 50, 52–53  
    continuity equation in, 49–52  
    differential operations in, 465–66  
    equation of motion (EOM) in, 467, 468  
    finite deformation tensors in, 471  
    Navier-Stokes equation in, 468  
    transformations of orthonormal bases, 471–74  
Copolymers, mixtures and, 181–88  
Corotational (Jaumann) derivative, 354  
Couette geometry, 288  
  drag flow for, 405–9  
Covariant coefficients of tensors, 348  
Covariant components of tensors and vectors, 344, 448  
Covariant transformations of tensors, 483–87  
Cox-Merz rule, 191, 193  
Creep  
  definition of, 141  
  elongational, 162–63  
  shear, 137, 141–50  
Creep compliance, 145–46  
Creep recovery, 146  
Cross (outer) product of vectors, 16, 17, 26–28  
Curl of tensors and vectors, 448  
Curvilinear coordinates. *See also* Cylindrical coordinates; Spherical coordinates  
  differential operations in, 464–66  
  finite deformation tensors in, 470–71  
  introduction to, 48–49  
Cyclic permutations, 27  
Cylindrical coordinates, 49–52  
  continuity equation in, 467  
  differential operations in, 464–65  
  equation of motion (EOM) in, 467, 468  
  finite deformation tensors in, 470–71  
  Navier-Stokes equation in, 468  
Damping function, 150, 210, 213, 448  
Deborah (Weissenburg) number, 448, 459  
Deformation  
  convected coordinates and, 346–47  
  definition of, 346  
Deformation-gradient tensor, 309–13, 314, 349–50  
De Gennes' reptation theory, 375  
Del (nabla) operator  
  asymmetric, 151, 448–49  
  in cartesian coordinates, 43  
  in cylindrical coordinates, 52  
  differential operations with, 42–48  
  Dirac (symmetric), 358–59, 449  
  in spherical coordinates, 53  
Determinant  
  of matrices, 449–50  
  of tensors, 42  
Deviatoric stress tensor, 450  
Dielectric tensor, 500  
Die swell, 7–8  
Differential operations  
  in curvilinear coordinates, 464–66  
  with vectors and tensors, 42–48  
Dilatant (shear-thickening) fluids, 230, 450  
Dirac (symmetric) delta function, 358–59, 449

- Direction of vectors, 14–15  
 Displacement function, 142–43  
 Displacement gradient tensor, 264  
 Divergence  
   Gauss-Ostrogradskii divergence theorem, 53–54  
   of tensors and vectors, 46, 450  
 Doi-Edwards constitutive equation, 375–76  
 Doi-Edwards reptation theory, 375–76  
 Dot product of tensors, 32–34  
 Dot (inner) product of vectors, 16–17, 24–26  
 Dough, 5–6  
 Drag flow  
   combined drag and Poiseuille flow through slits, 242–47, 248–49  
   cone and plate, 401–5  
   Couette geometry, 405–9  
   between infinite parallel plates, 77–84  
   between parallel disks, 397–401  
 Dummy variables, 450–51  
 Dyad (dyadic product), 30
- Eigenvectors, 451  
 Einstein notation  
   for tensors, 34–37, 451  
   for vectors, 28–30, 451  
 Elastic dumbbell model, 376–78  
 Elasticity, Hooke's law of, 1, 154–55, 263–64  
 Elastic modulus, 263  
 Elastic solids, rubber-elasticity theory, 370–72  
 Elastic/viscoelastic effects  
   die swell, 7–8  
   fluid memory, 6–7  
   introduction to, 5  
   Weissenberg effect, 5–6  
 Electric displacement vector, 500  
 Elongational creep, 162–63  
 Elongational flows. *See also* Shear flow  
   biaxial and planar  
     contraction flow—Cogswell and Binding analyses, 418–21  
     lubricated squeezing, 416–17  
     Meissner's apparatus, 415–16, 417  
     stagnation flows, 418  
   biaxial stretching flow, 119–21  
   birefringence in, 429  
   comparison of experimental features, 422  
   definition of, 132, 159  
   introduction to, 112–13, 159, 409, 411  
   planar, 121–22  
   steady, 159–62, 214–15  
   stress tensor in, 125–26
- uniaxial, 113–19  
   filament stretching—  
     Sridhar's apparatus, 413–15  
     melt stretching, 411–13  
   unsteady  
     elongational creep, 162–63

   invariants of, 40, 42, 453–54  
   inverse deformation-gradient, 311  
   inverse of, 41–42  
   linear vector functions as, 37–38  
   magnitude of, 39  
   order of, 41  
   orthogonal, 315, 455  
   physical components of, 455  
   positive definite, 456  
   principal axes of, 424  
   rate-of-strain, 75, 257  
   rules of algebra. *See also* Multiplication of tensors  
     addition, 30–32  
     dot product, 32–34  
     introduction to, 30  
     scalar product, 34  
   shear-rate, 268  
   singular/nonsingular, 457  
   strain, 314, 329, 489  
     Finger, 164  
   stress. *See* Stress tensor  
   susceptibility, 501  
   symmetric, 39  
   trace of, 40  
   transpose of, 34–35  
   zero, 39  
 Terminal zone, 191  
 Thermo-rheological complexity, 457  
 Thixotropic fluids, 457  
 Time-strain factorability, 457–58  
 Time-temperature shift factors, 458  
 Time-temperature superposition (TTS), 197–206, 458  
 Torsional flow between parallel plates, 94–98  
 Torsional oscillatory viscometer measurement of SAOS material functions, 293–95  
   velocity profile calculation, 288–93  
 Total stress tensor, 69, 126  
 Trace of tensors, 40  
 Traction vector, 458  
 Transpose of tensors, 34–35  
 Triple product of vectors, 341  
 Trouton ratio, 214, 331, 458  
 Trouton viscosity, 214, 458  
 TTS (time-temperature superposition), 197–206, 458  
 Tubes  
   Poiseuille flow in, 89–94  
  
 Poiseuille flow of GLVE fluids in, 285–88  
 Poiseuille flow of power-law GNF in, 236–42  
   pressure-driven flow in, 236–42  
  
 Ultimate recoil function, 147  
 Ultimate recoverable elongational strain, 163  
 Uniaxial elongational flow, 113–19
