Contents

<i>Preface</i>	ix
1 Introduction to chemical finishing	1
1.1 Wet and dry or chemical and mechanical finishing	1
1.2 The challenge and charm of chemical finishing	2
1.3 Importance of chemical finishing	4
References	6
2 Chemical finishing processes	7
2.1 Introduction	7
2.2 Application of chemical finishes	8
2.3 Drying wet textiles	20
2.4 Curing chemical finishes	21
2.5 Coating and laminating	23
References	26
Appendix	27
3 Softening finishes	29
3.1 Introduction	29
3.2 Mechanisms of the softening effect	29
3.3 Typical softened textiles articles	31
3.4 Product types and their chemistry	31
3.5 Schematic comparison of important properties of softeners	36
3.6 Compatibility and combinability	36
3.7 Evaluation and testing methods	38
3.8 Particulars of and troubleshooting for softening finishes	39
References	41
4 Hand building finishes	43
4.1 Introduction	43
4.2 Definitions and terms	43

4.3	The hand building effect	44
4.4	Examples of textiles with hand building finishes	44
4.5	Typical hand builder chemistry	44
4.6	Evaluation methods	48
4.7	Troubleshooting for hand building finishes	50
	References	50
5	Easy-care and durable press finishes of cellulose	51
5.1	Introduction	51
5.2	Mechanisms of easy-care and durable press finishing	52
5.3	Examples of textiles with easy-care and durable press finishes	54
5.4	Chemistry of easy-care and durable press finishes	55
5.5	Application methods	64
5.6	Compatibility with other finishes	67
5.7	Evaluation methods	67
5.8	Troubleshooting and practical problems	69
	References	72
6	Repellent finishes	74
6.1	Introduction	74
6.2	Mechanisms of repellency	75
6.3	Repellent chemistry	76
6.4	Evaluation of textiles treated with repellent finishes	84
6.5	Troubleshooting for repellent finishes and particularities	84
	References	85
7	Soil-release finishes	87
7.1	Introduction	87
7.2	Mechanisms of soil release	87
7.3	Soil-release chemistry	91
7.4	Evaluation of soil release	95
7.5	Troubleshooting for soil-release finishes	96
	References	97
8	Flame-retardant finishes	98
8.1	Introduction	98
8.2	Mechanisms of flame retardancy	98
8.3	Flame-retardant chemistry	102
8.4	Flame retardants for cellulose	103
8.5	Flame retardants for wool	108
8.6	Flame retardants for polyester	109
8.7	Flame retardants for nylon	110
8.8	Flame retardants for other fibres	111

8.9	Flame-retarding fibre blends	111
8.10	Novel approach to flame retardancy: intumescent	112
8.11	Evaluation of flame retardants	112
8.12	Troubleshooting for flame-retardant finishes and particularities	115
	References	116
9	Non-slip finishes	117
9.1	Introduction	117
9.2	Mechanisms of non-slip finishes	118
9.3	Chemistry of non-slip finishes	118
9.4	Application methods and combinability	118
9.5	Evaluation of non-slip finishes	119
9.6	Troubleshooting for non-slip finishes	120
	References	120
10	Antistatic finishes	121
10.1	Introduction	121
10.2	Mechanisms of antistatic finishes	123
10.3	Chemistry of antistatic finishes	123
10.4	Conductive fibres	125
10.5	Evaluation of antistatic finishes	126
10.6	Troubleshooting for antistatic finishes and particularities	127
	References	128
11	Anti-pilling finishes	129
11.1	Introduction	129
11.2	Pilling mechanism	129
11.3	Mechanisms and chemistry of anti-pilling finishes	132
11.4	Evaluation of anti-pilling finishes	133
11.5	Troubleshooting for anti-pilling finishes and compatibility	134
	References	136
12	Elastomeric finishes	138
12.1	Introduction	138
12.2	Elastomeric mechanism	139
12.3	Chemistry of elastomeric finishes	139
12.4	Evaluation of elastomeric finishes	141
12.5	Troubleshooting for elastomeric finishes and particularities	142
	References	142
13	Finishes to improve colour fastness	144
13.1	Introduction	144
13.2	Improved wet fastness	144

13.3	Improved light fastness	149
13.4	Improved crocking and rubbing fastness	153
	References	155
14	Ultraviolet protection finishes	157
14.1	Introduction	157
14.2	Mechanism of UV protection	158
14.3	Chemistry of UV protection finishes	160
14.4	Evaluation of UV protection finishes	162
14.5	Troubleshooting for UV protection finishes and combinability	163
	References	163
15	Antimicrobial finishes	165
15.1	Introduction	165
15.2	Properties of an effective antimicrobial finish	166
15.3	Mechanisms of antimicrobial finishes	166
15.4	Chemistry of antimicrobial finishes	167
15.5	Evaluation of antimicrobial finishes	171
15.6	Troubleshooting for antimicrobial finishes	172
	References	174
16	Insect resist and mite protection finishes	175
16.1	Introduction	175
16.2	Mechanisms of insect resist finishes	175
16.3	Chemistry of insect resist finishes	177
16.4	Application of insect resist finishes	178
16.5	Evaluation of insect resist finishes	178
16.6	Troubleshooting for insect resist finishes	178
16.7	Finishes for protection from dust mites	179
	References	179
17	Finishing with enzymes: bio-finishes for cellulose	181
17.1	Introduction	181
17.2	Action of cellulase enzymes on cellulose	183
17.3	Chemistry of enzyme finishing	184
17.4	Evaluation of bio-finishing	186
17.5	Troubleshooting for bio-finishing	186
	References	187
18	Novel finishes	189
18.1	Introduction	189
18.2	Anti-odour and fragrance finishes	189

18.3	Fibre surface modifying finishes using plasma and radiation technologies	193
18.4	Fibre surface modification by sol-gel finishes with inorganic oxide films	194
	References	197
19	Actual and future trends in chemical finishing	198
19.1	Introduction	198
19.2	Cost reduction and greater efficiency	198
19.3	New kinds of effects	198
19.4	Fewer undesirable side effects	200
19.5	Easier application	200
19.6	Microencapsulation, a new trend for storage and release of active finishing products	200
19.7	Greater permanence in washing and chemical cleaning	201
19.8	Easier care of the finished textiles	202
19.9	Better ecology	202
19.10	Using fewer chemicals	203
19.11	Smart textiles by chemical finishing	204
19.12	Summary and outlook	205
	References	206
