# Principles and Technical Aspects of PCR Amplification

Springer

# Contents

Foreword .....	v
<b>Chapter 1 The Polymerase Chain Reaction .....</b>	<b>1</b>
1.1 An Overview of the PCR Process .....	1
1.2 Before PCR and Beyond .....	2
<b>Chapter 2 A Brief Comparison Between <i>In Vivo</i> DNA Replication and <i>In Vitro</i> PCR Amplification .....</b>	<b>9</b>
2.1 Nucleic Acid Targets .....	9
2.1.1 DNA .....	9
2.1.2 RNA .....	11
2.2 Target DNA Strand Separation and Primer Annealing .....	12
2.3 DNA Dependent DNA Polymerase and Oligonucleotide Primers .....	13
2.4 Deoxyribonucleotides and Additional Factors .....	14
<b>Chapter 3 The PCR in Practice .....</b>	<b>17</b>
3.1 Brief Overview of PCR Requirements .....	17
3.1.1 The PCR Reaction Mix .....	17
3.1.2 The PCR Thermocycling Regime .....	19
3.1.3 Analysis of PCR Amplification Products .....	22
3.1.4 Miscellaneous Considerations .....	22
<b>Chapter 4 The Different Types and Varieties of Nucleic Acid Target Molecules .....</b>	<b>25</b>
4.1 General Features .....	25
4.2 A Brief Description of <i>In Vivo</i> DNA and RNA Targets .....	26
4.3 DNA Samples .....	33
4.3.1 DNA Isolation Procedures .....	34
4.3.2 Comments on Nucleic Acids in Specific Sample Types .....	39
4.4 RNA Samples .....	44
4.4.1 Working Free of RNase Contamination .....	45

4.4.2	RNA Isolation for RT-PCR	47
4.5	Reverse Transcription and RT-PCR	50
4.5.1	cDNA Synthesis	53
4.5.2	cDNA Synthesis Using RACE	55
4.5.3	RNA Extraction and cDNA Synthesis Controls	57
<b>Chapter 5</b>	<b>PCR Primers</b>	<b>63</b>
5.1	PCR Primer Design and Quality Requirements	64
5.1.1	Different Primer Species	68
5.2	Primer Hybridisation (Annealing)	76
5.3	Thermodynamic Approach of $T_m$ Calculations	78
5.4	Primer Synthesis	81
5.5	Non-radioactive Primer Labelling	83
5.6	The Effect of Mismatches Between PCR Primer and Target	86
5.7	Primer Concentration	87
<b>Chapter 6</b>	<b>Deoxynucleotide Triphosphates and Buffer Components</b>	<b>91</b>
6.1	Factors Affecting the Choice of dNTP Concentration	92
6.2	Modified dNTPs and Their Applications	93
6.3	The PCR Buffer	94
6.3.1	Monovalent Ions	98
6.3.2	Magnesium Ions	99
<b>Chapter 7</b>	<b>Taq and Other Thermostable DNA Polymerases</b>	<b>103</b>
7.1	The Advantages and Disadvantages of Taq over Klenow Fragment DNA Polymerase	104
7.2	Misincorporation of Nucleotides and Fidelity of DNA Synthesis by Taq Polymerase	107
7.3	Taq DNA Polymerase and Its Modifications	110
7.4	Taq Polymerase Unit Definition and Working Concentrations	113
7.5	Other Thermostable Polymerases and Their Applications	113
7.6	Mixtures of Thermostable Polymerases	117
<b>Chapter 8</b>	<b>Important Considerations for Typical, Quantitative and Real-Time PCR Protocols</b>	<b>119</b>
8.1	The Typical PCR Amplification Protocol	119
8.1.1	Denaturation (Melting) of the Template DNA	121
8.1.2	Annealing (Hybridisation) of PCR Primers	122
8.1.3	Calculating the Primer Annealing Temperature ( $T_m$ )	124
8.1.4	DNA Chain Extension/Elongation	125

8.1.5	PCR Cycle Number	126
8.1.6	The "Plateau Phase" and Final Stages of PCR Thermocycling	127
8.1.7	PCR Sensitivity	128
8.2	Quantitative PCR Protocols	128
8.2.1	Quantitative PCR Controls	129
8.3	Real-Time PCR Protocols	133
8.4	RNA Extraction and Treatment	137
<b>Chapter 9</b>	<b>Analysis of PCR Amplification Products</b>	<b>141</b>
9.1	Visualizing PCR Amplification Products	141
9.1.1	Intercalating Chemical Dyes and Silver Ions	141
9.1.2	Fluorescent or Hapten Labelled Amplimers	144
9.2	Post-PCR Electrophoretic Analysis of Amplimers	146
9.2.1	Gel Electrophoresis Methodologies	147
9.2.2	Probe Hybridisation Methodologies	156
9.3	Real-Time Analysis of PCR Amplimers	168
9.3.1	<i>In vitro</i> Analysis Using Intercalating Chemical Dyes	169
9.3.2	FRET Quenching Assays	170
9.3.3	TaqMan Probes	172
9.3.4	FRET Enhancement Reactions	173
9.4	Nucleic Acid Sequencing	173
9.4.1	DNA Sequencing Using Non-thermostable DNA Polymerases	177
9.4.2	PCR Sequencing Using Thermostable DNA Polymerases	178
9.4.3	The Fidelity of PCR Sequencing Reactions	178
<b>Chapter 10</b>	<b>Ensuring PCR Quality – Laboratory Organisation, PCR Optimization and Controls</b>	<b>183</b>
10.1	The Primary Level of Quality Control – Laboratory Organization and the Prevention of PCR Contamination	183
10.1.1	Sources and Routes of Contamination	186
10.1.2	PCR Contamination Issues Within Individual PCR Laboratories	187
10.1.3	Detecting and Preventing PCR Contamination	189
10.2	The Secondary Level of PCR Quality Control – PCR Design and Optimization	192
10.2.1	Extrinsic and Intrinsic Factors	192
10.2.2	The Developmental Steps Needed to Achieve High Quality PCR Results	194

10.2.3	The Use of Positive and Negative Controls in PCR Quality .....	199
10.2.4	Causes and Solutions for False Positive and False Negative PCR Results .....	201
10.3	Quality Considerations Specific for RT-PCR Methodologies .....	207
10.3.1	Problems Likely to Cause False Positive Results in RT-PCR Assays .....	208
10.3.2	Problems Likely to Cause False Negative Results in RT-PCR Assays .....	209
<b>Chapter 11</b>	<b>Ensuring PCR Quality – Quality Criteria and Quality Assurance .....</b>	<b>213</b>
11.1	Quality Control Criteria and PCR .....	214
11.1.1	Sensitivity and Diagnostic Sensitivity .....	214
11.1.2	Specificity and Diagnostic Specificity .....	214
11.1.3	Reference and Threshold Values .....	217
11.1.4	The Predictive Value .....	218
11.1.5	Efficiency .....	219
11.1.6	Error and Accuracy .....	219
11.1.7	Precision and Correctness .....	220
11.1.8	Defining the Analytical or Quantification Range and Sensitivity .....	222
11.1.9	Recovery, Reproducibility and Quality Assurance .....	224
11.2	Quality Assurance and Multicenter Studies .....	226
<b>Chapter 12</b>	<b>Variants and Adaptations of the Standard PCR Protocol ...</b>	<b>231</b>
12.1	Generating Labelled PCR Amplimers for PCR Product Visualization, DNA Probes and Cloning .....	231
12.2	Two-Step PCR Protocol .....	234
12.3	Booster PCR .....	235
12.4	Hot-Start and Time-Release PCR Protocols .....	236
12.5	Inverse PCR .....	240
12.6	Asymmetric PCR .....	241
12.7	PCR Mediated DNA Sequencing Strategies .....	243
12.7.1	Generating Single-Stranded DNA for Sanger Sequencing Reactions .....	244
12.7.2	Classical Sanger Sequencing of Single-Stranded PCR Products .....	244
12.7.3	Direct PCR Sequencing .....	245
12.7.4	Four-Tube Cycle Sequencing .....	245
12.7.5	One-Tube Cycle Sequencing .....	248
12.7.6	Difficult to Sequence Templates .....	250

12.8	Touchdown and Touch-Up PCR	250
12.9	Multiplex PCR	252
12.10	PCR Using Degenerate Primers	253
12.11	Repeat and Inter-repeat PCR	254
12.11.1	Repeat PCR	255
12.11.2	Inter-repeat PCR and Random Amplification of Polymorphic DNA (RAPD)	255
12.12	AFLP Fingerprinting	258
12.13	Base Excision Sequence Scanning (BESS-T-Scan) for Mutation Detection	259
12.14	Differential Display RT-PCR (DD-PCR)	261
12.15	The Protein Truncation Test (PTT)	263
12.16	Methylation Specific PCR and PCR in the Detection of Mutagens	265
12.17	Breakpoint PCR	266
12.18	Site Directed Mutagenesis by PCR	267
12.19	PCR Amplimers for Cloning and Expression	268
12.20	SAGE	271
12.21	PCR Inhibition by DNA Specific Antibiotics and Mutagens	273

### Chapter 13 *In Situ* PCR Amplification (ISA) – Major Considerations,

	<b>Sample Processing and Applications</b>	<b>277</b>
13.1	Tissue Processing – Nucleic Acid Fixation/Extraction	278
13.1.1	Fixation	278
13.1.2	Type of Nucleic Acid	283
13.1.3	Detrimental Effects of Various Fixatives on Nucleic Acids	284
13.1.4	Effects of Tissue Processing Steps (Decalcification, Dehydration, Intermedium Application, Embedding) and Storage of Paraffin Blocks	286
13.1.5	Effects of Histological and Histochemical Staining	287
13.2	Differences in Approach for ISH, ISA and Standard PCR	288
13.2.1	Different Types of Tissue Preparations	288
13.2.2	DNA and RT-PCR on Paraffin-Embedded Tissue Sections	289
13.2.3	Improvement of PCR Efficiency Using Fixed Tissue Sections	290
13.3	An Introduction to <i>In Situ</i> Amplification (ISA)	292
13.4	Considerations in the Development of ISA Protocols	294
13.4.1	IS-PCR or PCR-ISH	294
13.4.2	Diffusion of Nucleic Acids	295

13.4.3	The Correct Fixative .....	295
13.4.4	Damage Caused by Paraffin Embedding .....	296
13.4.5	Detachment of Cells and Tissue Sections .....	296
13.4.6	Specimen Proteolysis .....	297
13.4.7	Acetylation and Other Forms of Tissue Section Pre-treatment .....	299
13.4.8	Pre-treatment of Preparations for IS-PCR .....	299
13.4.9	Testing for Loss of Amplimers Due to Leakage from Their Site of Production .....	301
13.4.10	Miscellaneous IS-PCR Considerations .....	301
13.4.11	Mispriming .....	304
13.4.12	Primer Independent Non-specific DNA Synthesis .....	304
13.4.13	Evaporation of Reactants During IS-PCR/ Wet Hot Start Procedure .....	307
13.4.14	Cell Thickness and ISA .....	307
13.4.15	Choosing a Hybridisation Control for Testing Amplimer Specificity .....	308
13.4.16	Choice of the PCR Processor .....	309
13.4.17	Choice of the Final Detection Method .....	309
13.5	ISA Optimisation .....	309
13.6	ISA Controls .....	311
<b>Index</b> .....		319
<b>Color Plates</b> .....		325
