<i>Contributor contact details</i>	<i>xi</i>
<i>Introduction – The potential of plasma technology in the textile industry</i>	<i>xv</i>
R. SHISHOO, Shishoo Consulting AB, Sweden	
<b>Part I Plasma science and technology</b>	<b>1</b>
<b>1 The physics and chemistry of plasmas for processing textiles and other materials</b>	<b>3</b>
W. G. GRAHAM, Queen's University, Belfast, UK	
1.1 Introduction	3
1.2 Gases	3
1.3 Plasmas	6
1.4 Plasma chemistry	12
1.5 Plasma-surface collisions	17
1.6 Summary	22
1.7 Bibliography	23
<b>2 The diagnosis of plasmas used in the processing of textiles and other materials</b>	<b>25</b>
J. W. BRADLEY and P. M. BRYANT, University of Liverpool, UK	
2.1 Introduction	25
2.2 Discharge electrical characteristics	26
2.3 Electrical plasma diagnostics	32
2.4 Plasma mass spectrometry	40
2.5 Optical emission spectroscopy	47
2.6 References	54

3	Low-pressure cold plasma processing technology P. LIPPENS, Europlasma N. V., Belgium	64
3.1	Introduction	64
3.2	Low-pressure vacuum plasma technology	65
3.3	Equipment for low-pressure vacuum plasma technology	68
3.4	Plasma activation in the technical textile and nonwoven industries	72
3.5	Plasma deposition on nonwoven materials	74
3.6	The economics of vacuum plasma treatment for fabrics and nonwovens	76
3.7	Conclusions	77
3.8	References	78
4	Atmospheric-pressure cold plasma processing technology T. HERBERT, Dow Corning Plasma Solutions, Ireland	79
4.1	Introduction	79
4.2	Basic manufacturability needs from plasma technology	81
4.3	Atmospheric-pressure plasma types for textile processing	86
4.4	Atmospheric-pressure plasma equipment for textile processing	101
4.5	Atmospheric-pressure plasma surface properties for textile products	111
4.6	The atmospheric-pressure plasma audit	125
4.7	References	128
5	Corona and dielectric barrier discharge plasma treatment of textiles for technical applications T. STEGMAIER, A. DINKELMANN and V. VON ARNIM, Institute for Textile Technology and Process Engineering Denkendorf, Germany, and A. RAU, Ahlbrandt System, Germany	129
5.1	Introduction to atmospheric-pressure plasma processes	129
5.2	Special adaptations of DBD technology to textiles	136
5.3	Plasma-induced surface activation of fibres	141
5.4	Deposition of nano-layers by gas polymerisation	146
5.5	Combination of DBD treatment and liquor deposition	150
5.6	Future trends	153
5.7	References	155

6	Nano-scale treatment of textiles using plasma technology	158
	D. HEGEMANN and D. J. BALAZS, Empa – Materials Science and Technology, Switzerland	
6.1	Introduction	158
6.2	Plasma technology for the textile industry	158
6.3	Materials and methods	160
6.4	Plasma cleaning	163
6.5	Plasma metallisation	165
6.6	Plasma polymerisation	168
6.7	Plasma co-polymerisation	172
6.8	Future trends	176
6.9	Sources of further information	177
6.10	References	177
<b>Part II</b>	<b>Textile applications</b>	<b>181</b>
7	Plasma treatment of textiles for water and oil repellency	183
	S. COULSON, P2i Ltd, UK	
7.1	Introduction	183
7.2	Requirement for water and oil repellency	184
7.3	Theory and testing of water and oil repellency	187
7.4	Current solutions for rendering textiles water and oil repellent	190
7.5	Use of plasmas for imparting liquid repellency	194
7.6	What the future holds	200
7.7	References and sources of further information	201
8	Interfacial engineering of functional textiles for biomedical applications	202
	U. VOHRER, Fraunhofer Institute for Interfacial Engineering and Biotechnology, Germany	
8.1	Introduction	202
8.2	Technical textiles for biomedical applications	203
8.3	Plasma treatment for interfacial engineering of technical textiles	205
8.4	Plasma reactor techniques	210
8.5	Assessment of the functionalised textiles	212
8.6	Surface engineering of biomedical textiles	213

8.7	Outlook	221
8.8	References	222
9	Plasma modification of wool	228
	H. THOMAS, DWI at the RWTH Aachen e.V., Germany	
9.1	Introduction	228
9.2	Plasma systems relevant for application to wool	229
9.3	Plasma-induced chemical and morphological changes	231
9.4	Textile properties of plasma-treated wool	237
9.5	Finishing performance of plasma-treated wool	239
9.6	Future trends	244
9.7	Sources of further information	244
9.8	Acknowledgments	244
9.9	References	244
10	Plasma modification of natural cellulosic fibres	247
	K. JOHANSSON, Institute for Surface Chemistry, Sweden	
10.1	Introduction	247
10.2	Description of natural and man-made cellulosic fibres	248
10.3	Mechanisms of interactions between plasmas and cellulose-based fibres	251
10.4	Plasma modification of cotton for textile applications	260
10.5	Plasma surface modification in cellulosic fibre-based composites	265
10.6	Plasma modification of solid wood and wood pulp fibres	268
10.7	Plasma modification of man-made cellulose	272
10.8	References	275
11	Plasma treatments of fibres and textiles	282
	B. MARCANDALLI, Stazione Sperimentale per la Seta, Italy, and C. RICCARDI, Università degli Studi di Milano-Bicocca, Italy	
11.1	Introduction	282
11.2	Principles of plasma processes	283
11.3	Plasma textile treatments	285
11.4	Advantages and problems of plasma treatments for textiles	295
11.5	Industrial applications	296
11.6	Acknowledgment	298
11.7	References	298

12	<b>Characterisation of plasma-treated textiles</b>	<b>301</b>
	A. NEVILLE, University of Leeds, UK; and R.R. MATHER and J.I.B. WILSON, Heriot-Watt University, UK	
12.1	Surface reactions in plasma treatment	301
12.2	Techniques for characterisation of plasma-treated textiles	305
12.3	Future trends – Nanoindentation	311
12.4	Surface characterisation challenges	311
12.5	References	313
