1 Permeability and structure in polymeric packaging materials	1
B. JASSE, A.M. SEUVRE and M. MATHLOUTHI	
Abstract	1
1.1 Introduction	1
1.2 Basic principles of permeability	2
1.2.1 Behaviour in rubbery polymers	2
1.2.2 Behaviour in glassy polymers	3
1.3 Experimental techniques	4
1.3.1 Volumetric methods	4
1.3.2 Gravimetric methods	5
1.3.3 Differential methods	6
1.3.4 Determination of solubility	7
1.3.5 Units of permeability	8
1.4 Parameters affecting permeability	8
1.4.1 Polymer properties	8
1.4.2 Prediction of gas barrier properties of polymers	16
1.4.3 Permeant properties	17
1.5 Conclusion	20
References	21
2 Alternative fatty food simulants for polymer migration testing	23
A.L. BANER, R. FRANZ and O. PIRINGER	
Abstract	23
2.1 Introduction	23
2.2 Food contact material regulations in the EC and the USA	24
2.3 Importance of migration testing using fatty foods	25
2.4 Advantages and disadvantages of conventional migration methods using food simulants	27
2.5 Physical principles of migration	28
2.5.1 The importance of the partition coefficient	28
2.5.2 The importance of the polymer diffusion coefficient	31
2.5.3 Considerations in the selection of appropriate fatty food simulating solvents	31
2.6 Comparison of results from migration measurements into fats and oils with those in alternative fatty food simulants	33
2.6.1 Alternative fatty food simulants for polyolefins	33
2.6.2 Alternative fatty food simulants for rigid PVC	37

	2.6.3	Alternative fatty food simulants for polystyrene	38
	2.6.4	Alternative fatty food simulants for other polymers	39
2.7		Estimation methods for alternative fatty food simulants	39
	2.7.1	Estimation of simulant sorption in polymers	40
	2.7.2	Estimation of polymer/simulant partition coefficients	41
2.8		High temperature fatty food simulants	43
2.9		Conclusions and necessary future investigations	44
		References	45
3		Food flavour and packaging interactions	48
		J.P.H. LINSSEN and J.P. ROOZEN	
		Abstract	48
	3.1	Introduction	48
	3.2	Absorption of flavour compounds by high density polyethylene	49
	3.3	Flavour changes of mineral water packed in low density polyethylene laminated packages	52
	3.4	Taste recognition threshold concentrations of styrene in oil in water emulsions	56
		References	60
4		Microwavability of packaged foods	62
		S.A.E. LEFEUVRE and M.B.M. AUDHUY-PEAUDECERF	
		Abstract	62
	4.1	Introduction	63
	4.2	Electromagnetic waves: theory	63
		4.2.1 The wave equation in the empty oven	65
		4.2.2 Electromagnetic energy	66
		4.2.3 Production of waves by a magnetron	67
	4.3	Energy absorption in natural media	67
		4.3.1 Free carriers	68
		4.3.2 Dipolar absorption	68
	4.4	Specific heat and infrared radiation	71
	4.5	Energy conservation and diffusion	72
	4.6	Microwave heating	73
		4.6.1 Microwave ovens	74
	4.7	Thermal and microwave ovens and the package	76
		4.7.1 Packaging materials	78
		4.7.2 Shape and size	82
	4.8	Monitored microwave heating	83
		4.8.1 Pizza heater	83
		4.8.2 Use of a water bath	83
		4.8.3 Lossy ceramics	85
	4.9	Conclusion	85
	4.10	List of symbols	85
		References	87
5		Effect of irradiation of polymeric packaging material on the formation of volatile compounds	88
		Z. EL MAKHZOUMI	
		Abstract	88
	5.1	Introduction	88
	5.2	Experimental	89

5.2.1	Materials	89
5.2.2	Methods	90
5.3	Results and discussion	90
5.3.1	Degradation products	91
5.3.2	Kinetics of degradation	94
5.3.3	Effects of the composition in additives	96
5.3.4	Effects of irradiation on the packaging material in contact with food stimulants	97
5.4	Conclusion	98
	Acknowledgements	98
	References	98
6	Package coating with hydrosorbent products and the shelf-life of cheeses	100
	M. MATHLOUTHI, J.P. de LEIRIS and A.M. SEUVRE	
	Abstract	100
6.1	Introduction	100
6.2	Water activity and shelf-life	102
6.3	Water vapour sorption of cheeses	103
6.4	Coating of soft cheese packaging materials	104
6.4.1	Conventional packaging materials	105
6.4.2	Improvement of the conventional package by coating	108
6.4.3	Packaging of soft cheeses: comparison of conventional and coated packages	109
6.4.4	Coating of PET with a hydrosorbent polymer	112
6.4.5	Increase in shelf-life of soft cheeses packed in coated PET complex	116
6.5	Conclusion and prospects	120
	Acknowledgements	121
	References	121
7	Trehalose – a multifunctional additive for food preservation	123
	C.A.L.S. COLAÇO and B. ROSER	
	Abstract	123
7.1	Introduction	123
7.2	Trehalose and cryptobiosis	125
7.3	Trehalose-dried foods	130
7.3.1	Trehalose preserves food volatiles	131
7.3.2	Nutritional characteristics	133
7.4	Mechanism of action	136
7.4.1	Water replacement hypothesis	136
7.4.2	Glass transformation hypothesis	136
7.4.3	Chemical stability hypothesis	137
7.5	Conclusion	138
	References	139
8	Packaging of fruits and vegetables: recent results	141
	F. RIQUELME, M.T. PRETEL, G. MARTÍNEZ, M. SERRANO, A. AMORÓS and F. ROMOJARO	
	Abstract	141
8.1	Introduction	141
8.2	Definition of MAP	142
8.3	Types of plastic films used for MAP	142
8.4	Effect of MA on the respiratory activity of fresh fruits and vegetables	144

8.5	Effect of MA on ethylene biosynthesis	146
8.6	Influence of MA on chemical composition	147
8.7	Recent applications of MAP	150
8.8	Minimally processed fruits and vegetables	152
8.9	Microbiological safety	153
8.10	External factors affecting MA preservation	154
	8.10.1 Temperature	154
	8.10.2 Relative humidity	155
	8.10.3 Light	155
	References	156
9	Bio-packaging: technology and properties of edible and/or biodegradable material of agricultural origin	159
	N. GONTARD and S. GUILBERT	
	Abstract	159
9.1	Introduction	159
9.2	Use of biopolymers in packaging	161
	9.2.1 Synthetic polymer/biopolymer mixtures	161
	9.2.2 Microbial polymers (polyesters)	162
	9.2.3 Packaging composed of polymers of agricultural origin	163
9.3	Properties and applications of 'bio-packaging'	165
	9.3.1 Organoleptic properties	165
	9.3.2 Mechanical properties	166
	9.3.3 Water and lipid solubility	169
	9.3.4 Gas, solute, lipid and water vapour permeability	170
9.4	Conclusion	178
	References	178
10	Bacterial poly(hydroxyalkanoates)	182
	G. EGGINK, J. SMEGEN, G. ONGEN-BAYSAL and G.N.M. HUIJBERTS	
	Abstract	182
10.1	Introduction	182
10.2	Biosynthesis of poly(3-hydroxybutyrate)	183
10.3	Biosynthesis of poly(3-hydroxyalkanoates)	185
10.4	Production of poly(3-hydroxyalkanoates)	187
	10.4.1 PHB fermentations	187
	10.4.2 PHA fermentations	188
	10.4.3 PHA synthesis in plants	189
10.5	Downstream processing	189
10.6	Properties of PHB and PHA	190
	10.6.1 Molecular weight	190
	10.6.2 Thermal properties	190
	10.6.3 Crystallinity/morphology	191
	10.6.4 Mechanical properties	191
	10.6.5 Biodegradability	192
10.7	Applications of PHB and PHA	193
10.8	Conclusions	194
	References	194
11	NMR imaging of packaged foods	197
	J.J. WRIGHT and L.D. HALL	
	Abstract	197
11.1	Introduction	197

11.2	Principles of NMR imaging	199
11.3	Materials and methods	202
11.3.1	Sample preparation	202
11.3.2	NMR imaging measurements	202
11.4	Results and discussion	202
11.5	Conclusion	208
	Acknowledgement	208
	References	208
12	The recycling, reuse and disposal of food packaging materials: a UK perspective	210
	A.J. CAMPBELL	
	Abstract	210
12.1	Introduction	210
12.1.1	Reuse	212
12.1.2	Recycling	212
12.1.3	Disposal	212
12.2	Recycling schemes in the UK	213
12.2.1	Metal	213
12.2.2	Plastic	214
12.2.3	Paper/board	214
12.2.4	Glass	215
12.2.5	Other schemes	215
12.3	Environmental pressure groups	216
12.3.1	Friends of the Earth (FoE)	216
12.3.2	Women's Environmental Network (WEN)	216
12.4	Industrial bodies	217
12.4.1	RECOUP (RECYling of Used Plastic Containers Ltd)	217
12.4.2	INCPEN (The Industry Committee for Packaging and the Environment)	217
12.5	Supermarkets	217
12.6	Legislation	217
12.7	Recycling symbols	218
12.8	Life Cycle Analysis (LCA)	219
12.9	Conclusions	220
	References	220
13	Influence of light transmittance of packaging materials on the shelf-life of milk and dairy products – a review	222
	J.O. BOSSET, P.U. GALLMAN and R. SIEBER	
	Abstract	222
13.1	Introduction	223
13.2	Effects of physico-chemical parameters	223
13.2.1	Emission spectrum of sunlight	226
13.2.2	Emission spectra of fluorescent tubes	226
13.2.3	Light intensities in display cabinets	227
13.2.4	Light transmittance of packagings	229
13.2.5	Absorption spectrum of riboflavin	230
13.3	Test conditions	231
13.4	Effects of light exposure on milk and dairy products	232
13.4.1	Effects on vitamins	232
13.4.2	Influence of riboflavin and effects of light on riboflavin	238
13.4.3	Effects on proteins and free amino acids	243
13.4.4	Effects on peroxide formation	244

13.4.5	Light induced formation of undesired volatile flavour compounds	245
13.4.6	Effects on colour	251
13.4.7	Effects on other components	252
13.4.8	Comparison of kinetics and limits of detection of light induced changes	253
13.5	Photodegradation mechanisms in milk and dairy products	253
13.5.1	Light and riboflavin	255
13.5.2	Methionine as a primary product of sunlight flavour formation	256
13.5.3	Fat oxidation	257
13.6	Effects of oxidants and antioxidants	257
13.7	Effects of processing on the photosensitivity of milk and dairy products	259
13.7.1	Effects of homogenisation pressure and temperature	259
13.7.2	Effects of pasteurisation temperature	260
13.8	Practical conclusions	261
13.8.1	Intrinsic factors	262
13.8.2	Extrinsic factors	263
	Acknowledgements	264
