<i>Woodhead Publishing in Textiles</i>	xiii
<i>Introduction</i>	xix

Part I Biomimetic principles, production and properties

1	Recombinant DNA methods applied to the production of protein-based fibers as biomaterials	3
	F. TEULÉ and R. LEWIS, University of Wyoming, USA; W. MARCOTTE JR and A. ABBOTT, Clemson University, USA	
1.1	Introduction	3
1.2	Biomimetics and protein-based biomaterials	4
1.3	Characteristics of some natural protein-based materials	5
1.4	Experimental characterization of model fibrous proteins	9
1.5	Expression systems available for recombinant fibrous protein production	15
1.6	Artificial material production, properties and performance	20
1.7	Conclusions	20
1.8	References	21
2	Purification of protein solutions	26
	S. HARCUM, Clemson University, USA	
2.1	Introduction	26
2.2	Insoluble removal	28
2.3	Cell disruption	31
2.4	Soluble protein separations	34
2.5	Finishing steps	42
2.6	Conclusions and sources of further information and advice	43
2.7	References	43

3	Spinning of fibers from protein solutions	44
	F. TEULÉ, University of Wyoming, USA	
3.1	Introduction	44
3.2	<i>In vivo</i> or natural spinning of protein-based fibers	45
3.3	Protein-based fibrous materials	45
3.4	Silk production in spiders and insects: a natural spinning process	47
3.5	Elements to consider for the <i>in vitro</i> or 'artificial' spinning of protein-based fibers	51
3.6	Factors involved in native self-assembly processes	52
3.7	'Mimicking nature'	53
3.8	Examples of protein-based fibers produced through artificial spinning technologies	55
3.9	Wet-spinning of fibrous proteins	55
3.10	Electrospinning of fibrous proteins	60
3.11	Applications	65
3.12	Future trends and conclusions	65
3.13	References	66
4	Biomimetic principles of spider silk for high-performance fibres	74
	C. HOLLAND and F. VOLLRATH, University of Oxford, UK	
4.1	Introduction	74
4.2	Unravelling structure–function relationships	77
4.3	Spider and worm spinning <i>in vivo</i>	81
4.4	Spinning <i>in vitro</i>	84
4.5	Future trends and applications	86
4.6	Conclusions	87
4.7	Sources of further information and advice	87
4.8	Acknowledgements	88
4.9	References	88
5	A biomimetic approach to the production of sustainable structural composites using plant fibres	95
	C. SANTULLI, University of Reading, UK	
5.1	Biomimetic design of composite materials	95
5.2	Characteristics of biological materials in biocomposites	97

5.3	Fibre extraction, fibre treatment and matrix compatibility in a biomimetic composite	99
5.4	Approaches to the realisation of plant fibre composites	101
5.5	Conclusions: plant fibre selection for composites reinforcement	108
5.6	References	109

Part II Biomimetic applications in textiles

6	Biomimetic principles in clothing technology	117
	V. KAPSALI and P. DUNAMORE, London College of Fashion, UK	
6.1	Introduction	117
6.2	The technology of clothing	118
6.3	Overview of biomimetic design and development	122
6.4	Biomimetic principles and the clothing industry	126
6.5	Key issues	133
6.6	Future trends	133
6.7	Conclusions	134
6.8	Sources of further information and advice	135
6.9	Acknowledgements	135
6.10	References	135
7	Self-cleaning textiles using the Lotus Effect	137
	T. STEGMAIER, V. VON ARNIM, A. SCHERRIEBLE and H. PLANCK, Institute of Textile Technology and Process Engineering Denkendorf (ITV), Germany	
7.1	Introduction: basics of self-cleaning textiles	137
7.2	Learning from the Lotus Effect: superhydrophobicity and self-cleaning	138
7.3	Measuring techniques for the characteristic Lotus Effect properties	142
7.4	Technical transfer	143
7.5	Applications	145
7.6	Future trends	148
7.7	Sources of further information and advice	148
7.8	References	149

8	Analysing the thermal properties of animal furs for the production of artificial furs	150
	L. HES, Technical University of Liberec, Czech Republic	
8.1	Introduction	150
8.2	Brief survey of the manufacture of artificial furs	151
8.3	Experimental study	152
8.4	Water-vapour permeability of furs	164
8.5	Conclusions	166
8.6	References	167
9	The role of plant stems in providing biomimetic solutions for innovative textiles in composites	168
	M. MILWICH and H. PLANCK, Institute of Textile Technology and Process Engineering, Denkendorf (ITV), Germany;	
	T. SPECK and O. SPECK, Universitaet Freiburg, Germany	
9.1	Introduction	168
9.2	Composites under development: 'smart composites'	172
9.3	Using biomimetics to boost the performance of composites	173
9.4	Learning from a role model: horsetail (<i>Equisetum hyemale</i>)	175
9.5	Learning from a role model: giant reed (<i>Arundo donax</i>)	179
9.6	Learning from a role model: wood	182
9.7	Combination of different principles of role models into the 'technical plant stem'	183
9.8	Production methods and machinery equipment for the 'technical plant stem'	183
9.9	Applications of the 'technical plant stem'	188
9.10	Conclusions and future trends	189
9.11	Acknowledgement	190
9.12	References	190
10	Bionic developments based on textile materials for technical applications	193
	T. STEGMAIER, V. VON ARNIM, M. LINKE, M. MILWICH, J. SARSOUR, A. SCHERRIEBLE, P. SCHNEIDER and H. PLANCK, Institute of Textile Technology and Process Engineering Denkendorf (ITV), Germany	
10.1	Introduction	193
10.2	Potential of fiber-based materials in bionics	194
10.3	Research activities in the field of surfaces	195

10.4	Research activities in environmental technology	196
10.5	Research activities in energy technology/management	203
10.6	Research activities in the field of lightweight construction	209
10.7	Future trends	210
10.8	Conclusions	210
10.9	Sources of further information and advice	211
10.10	Acknowledgements	211
10.11	References	211
