<i>Woodhead Publishing Series in Textiles</i>	<i>xv</i>
<i>Preface</i>	<i>xxiii</i>
Part I Design issues in military clothing and equipment	1
1 Key issues in body armour: threats, materials and design	3
I. HORSFALL, Cranfield University, UK	
1.1 Introduction	3
1.2 Injury mechanisms	4
1.3 Armour and threat characteristics	5
1.4 Textile ballistic body armour	8
1.5 Knife armour	11
1.6 High-velocity ballistic armour	15
1.7 Conclusions	18
1.8 Sources of further information	19
1.9 References	19
2 Assessing military equipment requirements and capability: the Australian experience	21
J. DAVY, Defence Science and Technology Organisation, Australia	
2.1 Introduction: history of Australian LAND 125 (L125) soldier modernisation project	21
2.2 The development of the integrated soldier combat system	23
2.3 The spiral development action plan (SDAP) – 2004 to 2010	30
2.4 The spiral development action plan (SDAP) in-depth – survivability and C4I (command, control, communications, computers, and intelligence)	34
2.5 A systems approach – LAND 125 (L125) high level architecture framework	37
2.6 Future trends – from spiral development to adaptive acquisition	42

vi	Contents	
2.7	Conclusions	43
2.8	Acknowledgements	45
2.9	References	46
3	Anthropometric methods for the successful design of military clothing and equipment D. J. CARR, Cranfield University, UK, C. A. WILSON and R. M. LAING, University of Otago, New Zealand	49
3.1	Introduction	49
3.2	Anthropometric methods	50
3.3	Development of sizing systems	53
3.4	Anthropometry of military personnel	55
3.5	Conclusions	58
3.6	Sources of further information	59
3.7	Acknowledgement	59
3.8	References	60
4	Psychological issues in military uniform design G. P. KRUEGER, Colonel (retired) US Army, USA	64
4.1	Introduction: the evolution of military uniforms	64
4.2	The protective role of the functional military uniform	68
4.3	Human factors to be considered in the development of military uniforms	69
4.4	Future trends	76
4.5	Conclusion	77
4.6	Sources of further information	77
4.7	References	78
5	Colour and camouflage: design issues in military clothing J. BAUMBACH, Council for Scientific and Industrial Research (CSIR), South Africa	79
5.1	Introduction	79
5.2	Camouflage: colours and patterns	80
5.3	Human perception	81
5.4	Perceiving the environment: the human visual system and electronic imagers	84
5.5	Camouflage design considerations	89
5.6	Evaluation of colour and camouflage patterns designs	92
5.7	Future trends	96
5.8	Conclusions	98
5.9	Sources of further information and advice	99
5.10	References	100

6	Materials and design issues for military helmets A. M. S. HAMOUDA, Qatar University, Qatar and R. M. SOHAIMI, A. M. A. ZAIDI and S. ABDULLAH, National Defence University Malaysia, Malaysia	103
6.1	Introduction	103
6.2	History of ballistic helmets	104
6.3	Head impact mechanics and injury	108
6.4	Design aspects of ballistic helmets	113
6.5	Types of materials used for ballistic helmets	116
6.6	Modelling projectile impact on ballistic helmets	120
6.7	Manufacturing of ballistic helmets	125
6.8	Testing of ballistic helmets	129
6.9	Future trends and conclusions	131
6.10	References	133
7	Design issues in military footwear and handwear G. TORRENS and I. CAMPBELL, Loughborough University, UK, W. TUTTON, Defence Science and Technology Laboratory (Dstl), Ministry of Defence (MoD), UK	139
7.1	Introduction	139
7.2	Fit of handwear and footwear	142
7.3	Physiological maintenance	148
7.4	Task performance	152
7.5	Other factors which influence the design of footwear and handwear	154
7.6	Future trends	157
7.7	Sources of further information and advice	163
7.8	References	163
Part II	Applications to particular types of military clothing and equipment	165
8	Customization of a lightweight bullet-proof vest for the female form F. BOUSSU and P. BRUNIAUX, University of Lille North of France, France	167
8.1	Introduction	167
8.2	Hierarchy modelling for pattern design of a soft ballistic panel	168
8.3	Types of fibrous materials used for soft ballistic body armour protection	184
8.4	Ballistic results from a 3D body armour prototype	185
8.5	Conclusions	192
8.6	References	194

viii	Contents	
9	Optimisation of body armour design parameters: vulnerability and survivability assessment C. COULDRICK, Cranfield University, UK	196
9.1	Introduction	196
9.2	Components of personal armour design	197
9.3	A systems approach to personal armour design	203
9.4	Future opportunities to improve personal armour design	208
9.5	Conclusions	210
9.6	References	211
10	High-performance ballistic protection using polymer nanocomposites D. K. Y. TAM, S. RUAN, P. GAO and T. YU, The Hong Kong University of Science and Technology, People's Republic of China	213
10.1	Introduction	213
10.2	Bullet-proof vests as ballistic protection	214
10.3	The application of nanotechnology for ballistic protection materials	221
10.4	Production of high-performance ballistic-proof fibers from nanotechnology	226
10.5	Applications of nanocomposite ballistic materials	233
10.6	Future trends	234
10.7	Sources of further information	235
10.8	References	235
11	Modelling the comfort and protection qualities of chemical, biological, radiological and nuclear (CBRN) protective clothing P. BRASSER, Brapa Consultancy, The Netherlands, and M. SOBERA, Shell International Exploration and Production B.V., The Netherlands	238
11.1	Introduction	238
11.2	Processes to be modelled	240
11.3	Micro-scale modelling	242
11.4	Meso-scale modelling	246
11.5	Macro-scale full-scale virtual mannequin modelling	256
11.6	Future trends and conclusions	257
11.7	References	258
12	Advances in materials for chemical, biological, radiological and nuclear (CBRN) protective clothing U. TURAGA, R. J. KENDALL, V. SINGH, M. LALAGIRI and S. S. RAMKUMAR, Texas Tech University, USA	260
12.1	Introduction	260
12.2	Characteristics of chemical, biological and nuclear agents	260

12.3	Detection of chemical, biological and nuclear (CBN) agents	264
12.4	Protection from chemical, biological and nuclear (CBN) agents	267
12.5	Decontamination of chemical, biological and nuclear (CBN) agents	272
12.6	Multifunctional materials for protection	278
12.7	Applications of nanotechnology in the defense sector	281
12.8	Conclusions	282
12.9	References	282
13	Designing load carriage systems for military personnel W. TUTTON, Defence Science and Technology Laboratory (Dstl), Ministry of Defence (MoD), UK and H. DENTON, Loughborough University, UK	288
13.1	Introduction	288
13.2	Basic principles and key issues of soldier load carriage	289
13.3	Implications of human factors on soldier load carriage design	292
13.4	Applications of load carriage systems	298
13.5	Future trends	302
13.6	Sources of further information and advice	303
13.7	References	303
14	Advanced hydration systems for soldiers: the example of the US Army J. KIRK, US Army Natick Soldier Center, USA	306
14.1	Introduction: combat hydration requirements	306
14.2	Historical review of US military hydration systems	307
14.3	Recent advances in hydration systems	312
14.4	Future trends for individual hydration	315
14.5	References	316
