American Edition published by
INTERSCIENCE PUBLISHERS INC
215 FOURTH AVENUE, NEW YORK 3

First Edition July 1949

Set in Monotype Old Style Type
Printed in Great Britain by Richard Clay and Company, Ltd., Bungay, Suffolk
Bound by G. A. Cramp and Sons, Ltd., Mitcham, Surrey

CONTENTS

	PAGE
PREFACE	xiii
INTRODUCTORY TABLES	
Abbreviations	1
First aid	2
Weights and measures	3
Conversion factors	5
Temperature conversion table	10
Mathematical formulae	
Algebra	15
Trigonometry	18
Mensuration	20
Co-ordinate geometry	20
Calculus	22
Hydrometer scales	41
Specific gravity and composition of acids	42
Saturated water vapour pressures	42
Wet- and dry-bulb relative humidity values	43
CONSTANTS OF GENERAL AND NUCLEAR PHYSICS	
Atomic weights and atomic numbers	44
General physical constants	44
Elementary particles and their properties	49
Atomic nuclei and their properties	49
Periodic system of elements	<i>facing</i> 84
Radioactive families	84
LINE SPECTRA OF THE ELEMENTS	
Sensitive lines of the elements	85
Principal lines of the elements	87
Analysis lines of the elements	126
Lines for use in visual quantitative analysis	129
X-RAY CRYSTALLOGRAPHY	
Excitation of x-rays	138
Targets, wavelengths and β -filters	139
Excitation potentials in kv for characteristic x-ray spectra	140
K emission lines and K absorption edges (kX units)	141
L emission spectra and L_{111} absorption edges (kX units)	142
Crystals for producing monochromatic x-rays	143
X-ray technique	143
Intensity of x-ray reflections	145
Atomic scattering factors	147
Characteristic temperatures and atomic weights	148
The functions $\phi(x)$, $\frac{\phi(x)}{x}$ and $\left\{ \frac{\phi(x)}{x} + \frac{1}{4} \right\}$	149
Debye-Waller temperature factor	149
Lorentz and polarization factors	150
Multiplicity factor	150
Mass absorption coefficients of elements, including scattering	151
Macro-absorption factors	152
Micro-absorption factors	153

Derivation of accurate unit cell dimensions in crystals
 Crystal geometry
 Diffraction data for cubic crystals
 Angles between crystallographic planes in crystals of the cubic system
 Values of $\frac{1}{2} \left(\frac{\cos^2 \theta}{\sin \theta} + \frac{\cos^2 \theta}{\theta} \right)$
 Protective thicknesses of lead
 Lead equivalents of building materials
 Glide elements and fracture planes of metal crystals
 Twinning in metals
 Fibre textures of drawn wire
 Textures of rolled metals
 Textures in electrodeposits
 Textures in evaporated and sputtered films
 Textures of cast metals
 Determination of crystal structure
 Atomic and ionic radii

CRYSTALLOGRAPHY

Structure of crystals
 Schoenflies system of point- and space-group notation
 Hermann-Mauguin system of point- and space-group notation

CRYSTAL CHEMISTRY

Structure of metals, metalloids and their compounds
 Survey of crystal types
 Structural details

GEOCHEMISTRY

Geospheres of the Earth
 Geochemical classification of elements
 Differentiation of magmas
 Typical elements from mother liquors of silicate magmas
 Distribution of elements in pegmatites
 Frequency of elements in Earth's crust
 Frequency of elements in igneous rocks
 Frequency of elements in meteorites
 Frequency of elements in primary sulphides
 Frequency of elements in the hydrosphere
 Average composition of rock types
 Weathering and sedimentation
 Chemical succession of sediments
 Geochemistry of some of the elements
 Occurrence of elements

METALLOGRAPHY

Introduction
 Electrolytic polishing techniques (iron and steel)
 Electrolytic polishing techniques (non-ferrous metals and alloys)
 Metallographic methods
 Aluminium
 Antimony
 Cadmium
 Cobalt
 Copper
 Gold
 Iron and Steel
 Lead
 Magnesium

Metallographic Methods	
Molybdenum	260
Nickel	260
Platinum group	262
Silicon	262
Silver	263
Tantalum	264
Tin	264
Tungsten	265
Zinc	266
Bearing metals, low melting solders and type metals	268
Cemented carbides and other hard alloys	268
Powdered and sintered metals	269
EQUILIBRIUM DIAGRAMS	
Binary systems	271
Ternary systems	348
Quaternary systems	376
GAS-METAL SYSTEMS	
Laws of solution of gases in metals	379
Solubilities of hydrogen, oxygen and nitrogen in the metallic elements	380
Endothermic solution of hydrogen in metals	381
Exothermic solution of hydrogen in metals	382
Properties of metallic hydrides	384
Solubility of nitrogen in metals and alloys	384
Solubility of oxygen in metals and alloys	385
Equilibria between compound gases and molten metals	386
Diffusion and permeation constants of gases in metals	387
DIFFUSION IN METALS	
Laws of diffusion	390
Diffusion diagrams	393
Methods for the determination of diffusion coefficients	400
Intermetallic diffusion: tables	400
Diffusion in liquid metals	409
GENERAL PHYSICAL PROPERTIES	
Physical properties of pure metals	413
Velocity of sound in metals	413
Viscosity	415
Surface tension	415
Parachor	417
THERMODYNAMICAL DATA	
Latent heats and temperatures of fusion, vaporization and transition, and changes in volume on melting	
Elements	418
Intermetallic compounds	420
Other metallurgically important compounds	421
Heat, entropy and free energy of formation	
Elements	424
Intermetallic compounds	424
Other metallurgically important compounds	428
Halides	434
Phosphides	435
Oxides	436
Sulphides	437
Liquid binary metallic systems	437

	PAGE
Molar heat capacities and specific heats	
Elements	440
Alloy phases and intermetallic compounds	441
Halides	445
Nitrides	446
Oxides	447
Sulphides, selenides and tellurides	448
Other compounds	448
Vapour and dissociation pressures	
Sulphur	448
Elements	449
Other metallurgically important compounds	450
Liquid binary alloys	451
Oxides and nitrides	451
Phosphides	452
Sulphides	453
THERMAL CONDUCTIVITY	
Metals and alloys	456
Molten metals	456
THERMOELECTRIC PROPERTIES AND TEMPERATURE MEASUREMENT	
Thermal E.M.F. of elements relative to platinum	457
Thermal E.M.F. of binary alloys relative to platinum	457
Precious metal thermocouples	458
Cold junction corrections	459
Base metal thermocouples	460
Colour temperature charts	461
Fixed points for calibration	461
Pyrometric cones	462
RADIATING PROPERTIES OF METALS	
Definitions of emissivity	463
Variation of spectral emissivity with temperature, angle of emission, etc	464
Spectral emissivity of metals at high temperatures	468
Spectral emissivity of metals at room temperature	470
Total emissivity of metals	470
Total emissivity of oxidized metals	471
THERMIONIC, PHOTOELECTRIC AND SECONDARY EMISSION	
Thermionic properties of the elements	472
Thermionic properties of adsorbed layers	473
Thermionic properties of oxide coated cathodes	473
Photoelectric work functions	474
Secondary emission of metals	474
Secondary emission of evaporated films	475
Secondary emission of compounds	475
ELECTRICAL PROPERTIES	
Resistivity and temperature coefficient of pure metals	476
Resistivity and temperature coefficient of alloys	477
Effect of composition on resistivity	478
Effect of magnetic field on resistivity	479
Effect of pressure on resistivity	479
Resistance of superconductive metals	480
Resistance of superconductive compounds	480
Resistance of superconductive alloys	480
Electrical properties of resistance materials	482
Electrical resistance heating materials	482

	ix PAGE
Wire data	483
Helical coil winding data	486
Current carrying capacity of copper and aluminium wire, <i>etc</i>	487
STEELS AND ALLOYS WITH SPECIAL MAGNETIC PROPERTIES	
Magnetic definitions	488
Magnetic units and conversion factors	490
Materials with magnetic properties	491
Magnetic susceptibilities of the elements	492
Composition of permanent-magnet steels and alloys	494
Heat treatment data for permanent-magnet steels and alloys	495
Hardness data for permanent-magnet steels and alloys	496
Magnetic properties and densities of permanent-magnet steels and alloys	497
Low-hysteresis-loss materials	498
High-permeability materials	499
Constant-permeability materials	504
Magnetic temperature-compensating materials	506
Non-magnetic materials	507
MECHANICAL TESTING	
Definitions	508
Hardness tests	509
Rockwell hardness scales	510
Hardness conversion tables for steels	511
Hardness conversion tables for aluminium and its alloys	512
Proposed hardness conversion table for brass	513
Standard tensile test pieces	514
Standard notched bar impact specimens	515
British standard test pieces for cast iron	516
U.S. standard test pieces for cast iron	517
British standard test pieces for malleable iron castings	517
MECHANICAL PROPERTIES	
Aluminium and aluminium alloys	
Physical properties	518
Mechanical properties at room temperature	520
Mechanical properties at elevated temperatures	524
Creep data	526
Fatigue strength at various temperatures	526
Copper and copper alloys	
Physical properties	527
Mechanical properties at room temperature	529
Tensile properties at elevated temperatures	535
Tensile properties at low temperatures	538
Fatigue properties at room temperature	539
Impact properties	541
Creep properties	544
Lead and lead alloys	549
Magnesium and magnesium alloys	
Mechanical properties at room temperature	550
Mechanical properties at elevated temperatures	551
Fatigue and impact strengths	552
Nickel and nickel alloys	
Physical properties	553
Mechanical properties at room temperature	554
Mechanical properties at elevated temperatures	555
Mechanical properties at subnormal temperatures	556

Fatigue properties at room and high temperatures	5
Creep properties	5
Zinc and zinc alloys	
Mechanical properties at normal temperatures	5
Mechanical properties at elevated and subnormal temperatures	5
Fatigue strength	5
Steels	
Carbon and alloy steels—physical properties	5
Corrosion and heat resisting steels—physical properties	5
Carbon steels—mechanical properties at room temperature	5
Alloy steels—mechanical properties at room temperature	5
Case hardening steels—mechanical properties at room temperature	5
Nitriding steels—mechanical properties at room temperature	5
Carbon and alloy steels—mechanical properties at elevated temperatures	5
Carbon and alloy steels—mechanical properties at sub-normal temperatures	5
Carbon and alloy steel forgings—fatigue strength	5
Corrosion resisting steels—mechanical properties at room temperature	5
Heat resisting steels—mechanical properties at room temperature	5
Heat resisting steels—mechanical properties at elevated temperatures	5
Corrosion and heat resisting steels—mechanical properties at sub-normal temperatures	5
Heat resistant steels—creep data	5
Tool steels and their uses	5
Tool steel heat treatments and hardness	5
Cast iron and cast steels	
Mechanical properties at room temperature	5
Mechanical properties at high temperatures	5
Mechanical properties at subnormal temperatures	5
Less common metals	
Mechanical and physical properties	5
Bearing alloys	
Mechanical properties	5
HARD METALS	
Properties of refractory carbides	5
Mutual solubilities of refractory carbides	5
Grades and uses of hard metals	5
Properties of hard metals	5
DEEP DRAWING PROPERTIES	
Drawability of metals and alloys	5
Effect of lubricants	5
LUBRICANTS	
Glossary	5
Classification and properties	5
Oils	5
Greases	5
Selection of lubricants for various purposes	5
CASTING ALLOYS AND FOUNDRY DATA	
Glossary	5
Processes	5
Sand casting	5

	PAGE
Die casting	596
Centrifugal casting	597
Precision investment casting	598
Fluxes	
Common fluxing practice	598
Properties of fluxes	599
Crucibles and melting vessels	599
Patterns	
Contraction allowances	602
Weights of castings from pattern weights	603
Recommended standard colours	603
Moulding sands	
Typical analyses	604
Comparison of standard test sieves	605
Moulding sands practice for various alloys	606
Core binding materials	607
Mould dressings	607
Composition and properties of casting alloys	
Aluminium-copper alloys	609
Aluminium-silicon alloys	610
Miscellaneous aluminium alloys	612
Gunmetals	613
Bearing bronzes	614
Brasses	614
High tensile brasses	615
Bronzes	616
Copper-nickel alloys	616
Magnesium alloys	617
Whitemetals	619
Cast steel	620
Cast iron	
Classification	622
Typical pig iron analyses	623
Typical analyses of high alloy cast iron	623
Densities and liquidus temperatures of cast iron	624
Structural effects of alloying elements	625
Melting losses	626
Malleable cast irons	626
REFRACTORY MATERIALS	
Glossary	627
Analyses of raw materials	629
Special refractories	629
Properties of refractory bricks	632
Properties of minerals associated with refractories and slags	634
Properties of insulating bricks	636
Nomenclature of brick shapes	638
Thermal expansion allowances	638
FUELS	
Classification of coal	640
Fuel Survey code numbers	640
Properties of coal	642
Analysis of coal	643
Sampling of coal	645
Metallurgical cokes	646
Properties of cokes	647
Coke classification	649

Fuel oils for high temperature metallurgical processes	65
Storage space for different fuels	65
CARBON AND GRAPHITE ELECTRODES	
Carbon electrodes—current carrying capacities	65
Graphite electrodes—current carrying capacities	65
CONTROLLED ATMOSPHERES FOR HEAT TREATMENT	
Chemistry of controlled atmosphere processes	65
Types of controlled atmospheres	65
Purification	65
Applications to ferrous alloys	65
Gas carburizing	65
Nitriding	65
Malleabilizing	65
Applications to non-ferrous alloys	65
CORROSION	
Tables of corrosion resistance	65
Corrosion tests	65
Normal electrode potentials	65
POLAROGRAPHIC ANALYSIS	
Chart of half wave potentials	65
ELECTROPLATING AND METAL FINISHING	
Cleaning and pickling processes	65
Anodizing and plating processes	65
Current efficiencies of plating solutions	65
Plating formulae for non-conducting surfaces	65
Polishing compositions	65
Methods of stripping electroplated coatings	65
Measuring thickness of coatings	65
Glossary of trade names for coating processes	65
WELDING	
Glossary	7
Mild steel	7
Low alloy structural steels	7
High alloy high tensile steel	7
Austenitic stainless steel	7
Hard surfacing alloys	7
Cast iron	7
Aluminium alloys	7
Magnesium alloys	7
Copper	7
Brasses	7
Copper-aluminium alloys	7
Nickel alloys	7
SOLDERS AND BRAZING ALLOYS	
Soft solders	7
Brazing alloys and silver solders	7
MISCELLANEOUS DATA	
Weight per foot of various metal bars	7
Weight per square foot of sheet metals	7
Length and weight of various wires	7
Comparative wire and sheet gauges	7
Sieve apertures	7
INDEX	7
