

TOWARDS A SUSTAINABLE

Paper cycle

An independent study on the sustainability of the pulp & paper industry

Prepared for the World Business Council for Sustainable Development by the

International Institute for Environment and Development

Contents

VIII FOREWORD

IX PREFACE

XI ACKNOWLEDGEMENTS

XIII EXECUTIVE SUMMARY

ASOCIACION DE TECNICOS DE LA
INDUSTRIA PAPELERA Y CELULOSICA ARGENTINA
A. T. I. P. C. A.

1 CHAPTER 1 INTRODUCTION

2 Background

3 Making Sustainable Development Operational

7 The Study Approach

7 Phase 1: Information Review

7 Phase 2: Research and Analysis

10 Stakeholder Consultation

11 The Scope of the Study

Structure of the Report

13 CHAPTER 2 PAPER AND THE PAPER INDUSTRY

14 The History of Paper

15 Paper Products

15 Overview

16 Product Descriptions

18 Economic Importance of the Paper Industry

18 Production Capacity and Output

19 Employment

20 Global Consumption of Paper Products

20 Production and Trade Flows

21 Industry Structure and Trends

21 Globalisation

22 Concentration Trends

22 Financial Performance

23 Capital Intensity and Economies of Scale

23 Vertical Integration

24 The Cyclical Nature of the Industry

25 CHAPTER 3 PERSPECTIVES ON A SUSTAINABLE PAPER CYCLE

26 What Constitutes a Sustainable Paper Cycle?

27 Regional Perspectives on the Paper Cycle

29 Key Concerns Raised at the NGO Consultation

31 CHAPTER 4 FORESTRY AND WOOD FIBRE SUPPLY

- 32 Where Does the Fibre Come From**
- 35 The Trend to Plantations**
- 36 How are the Forests Managed?**
- 37 Forest Management Problems
- 42 Social Impacts of Plantations
- 43 Recent Improvements in Forest Management
- 46 Key Issues in Sustainable Forest Management**
- 47 Definitions of SFM and Forest Stewardship
- 48 How Much (Old-Growth) Natural Forest to Set Aside
- 48 Where Clear-Cuts are Appropriate
- 50 Where Plantations are Appropriate
- 51 Making SFM Financially Feasible
- 52 Improving the Social Sustainability of Large-Scale Forestry Operations
- 54 The Policy and Management Challenge**
- 55 Action by Government to Encourage Pulp Production through SFM
- 61 Action by the Paper and Forestry Industries to Ensure SFM
- 62 Action in the Market to Encourage SFM – Developing the Role of Certification
- 65 Subsidiarity and International Roles
- 66 Summary of Recommendations**

71 CHAPTER 5 THE USE OF NON-WOOD FIBRES FOR PAPER PRODUCTION

- 72 Introduction**
- 73 Economic Comparison of Wood and Non-Wood Fibre for Paper-Making**
- 74 Social Issues**
- 75 Environmental Issues**
- 78 Conclusions and Recommendations**

81 CHAPTER 6 FORECASTING FIBRE DEMAND AND SUPPLY

- 82 Introduction**
- 83 Recent Trends in Pulp and Paper Demand and Supply**
- 83 Growth in Demand
- 84 Innovations in Supply
- 85 Recent Price Trends
- 86 Forecasting: Best Guesses and Alternative Visions**
- 88 The Pulpwood Supply Model**
- 89 Base Case Scenario

- 94 Alternative Scenarios
- 97 Implications for Trade
- 99 **Conclusions**
- 99 Will there be Enough Wood to Meet Anticipated Growth in Demand?
- 99 What are the Implications of Higher or Lower Demand?
- 100 What is the Impact of Imposing Environmental Constraints on Wood Supply ?
- 100 What are the Implications for Trade Flows and Competitiveness?

101 CHAPTER 7 PULP AND PAPER MANUFACTURING

- 102 **Introduction**
- 103 **Pulp and Paper-Making**
- 103 Pulping
- 106 Bleaching
- 106 Paper-Making
- 106 **Employee Health in the Pulp and Paper Industry**
- 108 **Energy Use in Pulp and Paper Manufacturing**
- 109 Developing Countries
- 110 The Outlook for Energy Efficiency
- 110 **Pollution from Pulp and Paper Manufacturing**
- 110 Liquid Effluent
- 113 The Bleaching Issue
- 117 Emissions to Air
- 118 Solid Waste
- 119 **Current Environmental Performance**
- 119 Comparison of Current Emissions with the Guidelines
- 120 Areas for Improvement
- 122 **Improving Environmental Performance**
- 122 Internal Process Changes
- 124 External Treatment
- 125 The Cost of Meeting “Good” Environmental Standards
- 128 **Regulating Pollution in the Pulp and Paper Sector**
- 129 Approaches to Regulation
- 131 Voluntary Agreements
- 133 National Variation in Regulation
- 134 Compliance
- 134 International Competitiveness
- 135 **Conclusions and Recommendations**
- 135 Conclusions
- 136 Recommendations

139	CHAPTER 8	CONVERTING
	140	Introduction
	140	Use of Inks and Adhesives
	141	The Impact of Different Printing Techniques
	142	Conclusions
143	CHAPTER 9	TRANSPORT IN THE PULP AND PAPER CYCLE
	144	Introduction
	144	Relative Transport Intensity of the Paper Cycle
	145	Cost of Transport in the Paper Cycle
	145	Environmental Impact of Transport in the Paper Cycle
	147	The Transport Implications of Increased Recycling
	149	Future Trends in Transport in the Paper Cycle
	149	Conclusions and Recommendations
151	CHAPTER 10	CONSUMPTION: PAPER SERVICES AND PAPER NEEDS
	152	Introduction
	152	Defining Sustainable Paper Consumption
	153	Eco-Efficient Consumption: More Services with Less Paper
	158	Eco-Sufficient Consumption: Enough Paper for All
	162	Policy and Management Implications
	162	Environmental Labelling
	170	Procurement Policies
	174	Conclusions
	174	Towards Sustainable Paper Consumption
	176	Labelling
	176	Procurement
	177	Recommendations
179	CHAPTER 11	WASTE PAPER
	180	Current Levels of Paper Recycling and Disposal
	182	Disposal Options
	183	Developing Countries
	183	Environmental Comparisons of Recycling and Disposal of Paper
	183	Life Cycle Studies
	186	Conclusions Drawn from the Life Cycle Studies
	186	Drawbacks of LCAs
	189	Other Waste Management Options
	190	Social Comparisons of Recycling and Waste Disposal

- 190 The NIMBY Factor
- 190 Employment
- 191 Developing Countries
- 191 **Economic Comparisons**
- 191 Production
- 193 Comparison of Collection and Sorting Costs with Waste Disposal Costs
- 196 Monetary Valuation of the Environmental Impacts of Waste Disposal
- 198 **Limits to Recycling**
- 199 **Policy Issues**
- 199 Recent Policy Initiatives
- 200 Rationale for Promoting Waste Paper Recycling
- 204 Other Approaches to Promoting Waste Paper Recycling
- 205 **Conclusions**

207 CHAPTER 12 THE PAPER CYCLE AND GREENHOUSE GASES

- 208 **Introduction**
- 208 **Greenhouse Gas Sources and Sinks Related to Paper Production and Disposal**
- 208 Energy Use in Pulp and Paper Production and Manufacture
- 210 Disposal – Landfills, Dumps and Incineration
- 212 Fossil Fuel Offset from Incineration and Land Filling
- 213 Transport
- 213 Recycling
- 214 Fibre Supply
- 216 **Overall Impact of the Paper Cycle on Global Warming**
- 217 The Paper Industry and Future Global Warming
- 219 **Conclusions and Recommendations**

221 CHAPTER 13 CONCLUSIONS AND RECOMMENDATIONS

- 222 **An Improving Paper Cycle?**
- 223 Fibre Availability and Pressure on Forest Resources
- 223 Forest Management is Changing
- 224 Industry is Attempting to Involve Local Communities
- 224 Pulp and Paper Manufacturing is Becoming Cleaner and Less Resource-Intensive
- 224 Transport
- 224 Consumption
- 224 Recycling is Increasing and Incineration Technology is Improving
- 225 **What are the Causes for Concern?**
- 225 Variations in Industry Performance

226	Aspects which Require More Attention from Industry Leaders
226	Outstanding Contentious Issues
226	Emerging Issues
227	Critical Factors
227	What are the Conditions for Sustaining Improvement?
228	What Needs to be Done and by Whom?
229	Recommendations for the Paper Industry
231	Recommendations for Governments
234	Recommendations for International Agencies
235	Recommendations for Consumers
235	Recommendations for NGOs
236	Recommendations for the Investment Community
236	An Agenda for Discussion
237	APPENDICES
238	Appendix 1: Advisory Group Members
239	Appendix 2: Project Sponsors
240	Appendix 3: Eco-Labelling Criteria for Tissue Paper
