

Thomas G. Mezger

# **The Rheology Handbook**

**For users of  
rotational and oscillatory rheometers**

2nd revised edition

# Contents

1	<b>Introduction</b> .....	16
1.1	Rheology, rheometry and viscoelasticity .....	16
1.2	Deformation and flow behavior.....	17
2	<b>Flow behavior and viscosity</b> .....	19
2.1	Introduction.....	19
2.2	Definition of terms.....	19
2.2.1	Shear stress.....	19
2.2.2	Shear rate.....	21
2.2.3	Viscosity.....	24
2.3	Shear load dependent flow behavior.....	26
2.3.1	Idealviscous flow behavior according to Newton .....	26
3	<b>Rotational tests</b> .....	29
3.1	Introduction.....	29
3.2	Basic principles .....	29
3.2.1	Test modes CSR and CSS, raw data and rheological parameters .....	29
3.3	Flow curves and viscosity functions.....	30
3.3.1	Description of the test.....	30
3.3.2	Shear-thinning flow behavior .....	33
3.3.2.1	Structures of polymers showing shear-thinning behavior.....	35
3.3.2.2	Structures of dispersions showing shear-thinning behavior.....	40
3.3.3	Shear-thickening flow behavior .....	40
3.3.3.1	Structures of polymers showing shear-thickening behavior.....	43
3.3.3.2	Structures of dispersions showing shear-thickening behavior.....	43
3.3.4	Yield point.....	44
3.3.4.1	Determination of the yield point using a flow curve diagram .....	45
3.3.4.2	Determination of the yield point using a tangent method.....	46
3.3.4.3	Further information on yield points .....	47
3.3.5	Summary: Flow curves and viscosity functions.....	51
3.3.6	Fitting functions for flow and viscosity curves.....	53
3.3.6.1	Model function for idealviscous flow behavior.....	53
3.3.6.2	Model functions for shear-thinning and shear-thickening flow behavior.....	53
3.3.6.3	Model functions for flow behavior including zero-shear and infinite-shear viscosity.....	54
3.3.6.4	Model functions for flow curves including a yield point.....	55
3.4	Time-dependent flow behavior and viscosity function .....	58
3.4.1	Description of the test.....	58
3.4.2	Time-dependent flow behavior of samples showing no hardening.....	59
3.4.2.1	Structural decomposition and regeneration (thixotropy and rheopexy).....	60
3.4.2.2	Test methods for investigating thixotropic behavior.....	62
3.4.3	Time-dependent flow behavior of samples showing hardening.....	67
3.5	Temperature-dependent flow behavior and viscosity function .....	69
3.5.1	Description of the test.....	69
3.5.2	Temperature-dependent flow behavior of samples showing no hardening.....	69
3.5.3	Temperature-dependent flow behavior of samples showing hardening .....	69
3.5.4	Fitting functions for temperature-dependent viscosity curves.....	70
3.6	Pressure-dependent flow behavior and viscosity function .....	72

4	<b>Elastic behavior and shear modulus</b> .....	74
4.1	Introduction .....	74
4.2	Definition of terms .....	74
4.2.1	Deformation and strain .....	74
4.2.2	Shear modulus .....	75
4.3	Shear load-dependent deformation behavior .....	78
4.3.1	Idealelastic deformation behavior according to Hooke .....	78
5	<b>Viscoelastic behavior</b> .....	80
5.1	Introduction .....	80
5.2	Basic principles .....	80
5.2.1	Viscoelastic liquids according to Maxwell .....	80
5.2.1.1	The Maxwell model .....	80
5.2.1.2	Examples of the behavior of VE liquids in practice .....	82
5.2.2	Viscoelastic solids according to Kelvin/Voigt .....	84
5.2.2.1	The Kelvin/Voigt model .....	85
5.2.2.2	Examples of the behavior of VE solids in practice .....	86
5.3	Normal stresses .....	88
6	<b>Creep tests</b> .....	90
6.1	Introduction .....	90
6.2	Basic principles .....	90
6.2.1	Description of the test .....	90
6.2.2	Idealelastic behavior .....	91
6.2.3	Idealviscous behavior .....	92
6.2.4	Viscoelastic behavior .....	92
6.3	Analysis .....	92
6.3.1	Behavior of the molecules .....	92
6.3.2	The Burgers model .....	93
6.3.3	Curve discussion .....	94
6.3.4	Definition of terms .....	96
6.3.4.1	Zero-shear viscosity .....	96
6.3.4.2	Creep compliance, creep recovery compliance .....	97
6.3.4.3	Retardation time .....	99
6.3.4.4	Retardation time spectrum .....	100
6.3.5	Data conversion .....	102
6.3.6	Determination of the molar mass distribution .....	102
7	<b>Relaxation tests</b> .....	103
7.1	Introduction .....	103
7.2	Basic principles .....	103
7.2.1	Description of the test .....	103
7.2.2	Idealelastic behavior .....	104
7.2.3	Idealviscous behavior .....	105
7.2.4	Viscoelastic behavior .....	106
7.3	Analysis .....	106
7.3.1	Behavior of the molecules .....	106
7.3.2	Curve discussion .....	106
7.3.3	Definition of terms .....	107
7.3.3.1	Relaxation modulus .....	107
7.3.3.2	Relaxation time .....	109

4	<b>Elastic behavior and shear modulus</b> .....	74
4.1	Introduction .....	74
4.2	Definition of terms .....	74
4.2.1	Deformation and strain .....	74
4.2.2	Shear modulus .....	75
4.3	Shear load-dependent deformation behavior .....	78
4.3.1	Idealelastic deformation behavior according to Hooke .....	78
5	<b>Viscoelastic behavior</b> .....	80
5.1	Introduction .....	80
5.2	Basic principles .....	80
5.2.1	Viscoelastic liquids according to Maxwell .....	80
5.2.1.1	The Maxwell model .....	80
5.2.1.2	Examples of the behavior of VE liquids in practice .....	82
5.2.2	Viscoelastic solids according to Kelvin/Voigt .....	84
5.2.2.1	The Kelvin/Voigt model .....	85
5.2.2.2	Examples of the behavior of VE solids in practice .....	86
5.3	Normal stresses .....	88
6	<b>Creep tests</b> .....	90
6.1	Introduction .....	90
6.2	Basic principles .....	90
6.2.1	Description of the test .....	90
6.2.2	Idealelastic behavior .....	91
6.2.3	Idealviscous behavior .....	92
6.2.4	Viscoelastic behavior .....	92
6.3	Analysis .....	92
6.3.1	Behavior of the molecules .....	92
6.3.2	The Burgers model .....	93
6.3.3	Curve discussion .....	94
6.3.4	Definition of terms .....	96
6.3.4.1	Zero-shear viscosity .....	96
6.3.4.2	Creep compliance, creep recovery compliance .....	97
6.3.4.3	Retardation time .....	99
6.3.4.4	Retardation time spectrum .....	100
6.3.5	Data conversion .....	102
6.3.6	Determination of the molar mass distribution .....	102
7	<b>Relaxation tests</b> .....	103
7.1	Introduction .....	103
7.2	Basic principles .....	103
7.2.1	Description of the test .....	103
7.2.2	Idealelastic behavior .....	104
7.2.3	Idealviscous behavior .....	105
7.2.4	Viscoelastic behavior .....	106
7.3	Analysis .....	106
7.3.1	Behavior of the molecules .....	106
7.3.2	Curve discussion .....	106
7.3.3	Definition of terms .....	107
7.3.3.1	Relaxation modulus .....	107
7.3.3.2	Relaxation time .....	109

7.3.3.3	Relaxation time spectrum .....	109
7.3.4	Data conversion .....	112
7.3.5	Determination of the molar mass distribution .....	113
8	<b>Oscillatory tests</b> .....	114
8.1	Introduction .....	114
8.2	Basic principles .....	114
8.2.1	Idealelastic behavior .....	115
8.2.2	Idealviscous behavior .....	116
8.2.3	Viscoelastic behavior .....	117
8.2.4	Definition of terms .....	118
8.2.5	The test modes CSR and CSD, raw data and rheological parameters.....	122
8.3	Amplitude sweeps.....	124
8.3.1	Description of the test.....	124
8.3.2	The structural character of a sample .....	125
8.3.3	The limiting value of the LVE range .....	125
8.3.3.1	Values of the permissible maximum strain (limit of the LVE range).....	126
8.3.3.2	Important values of the shear stress (limit of the LVE range).....	128
8.3.4	Determination of the yield point and the flow point using amplitude sweeps...	128
8.3.4.1	Yield point or yield stress.....	128
8.3.4.2	Flow point (or flow stress).....	129
8.3.4.3	Yield zone between yield point and flow point.....	129
8.3.4.4	Evaluation of the two terms yield point and flow point.....	129
8.3.5	Frequency-dependence of amplitude sweeps .....	129
8.3.6	Behavior outside of the LVE range .....	130
8.4	Frequency sweeps .....	131
8.4.1	Description of the test.....	132
8.4.2	Behavior of unlinked polymers .....	132
8.4.2.1	Single Maxwell model for polymers showing a narrow molar mass distribution .....	133
8.4.2.2	The generalized Maxwell model for polymers showing a wide MMD.....	135
8.4.3	Behavior of cross-linked polymers .....	138
8.4.4	Behavior of dispersions and gels.....	139
8.4.5	Comparison of superstructures using $G^2$ -curves of frequency sweeps.....	141
8.4.6	Multiwave test.....	142
8.4.7	Data conversion .....	143
8.5	Time-dependent behavior at constant dynamic-mechanical and isothermal conditions.....	143
8.5.1	Description of the test.....	143
8.5.2	Time-dependent behavior of samples showing no hardening.....	144
8.5.2.1	Structural decomposition and regeneration (thixotropy and rheopexy).....	145
8.5.2.2	Test methods for investigating thixotropic behavior .....	146
8.5.3	Time-dependent behavior of samples showing hardening .....	150
8.6	Temperature-dependent behavior at constant dynamic mechanical conditions.....	153
8.6.1	Description of the test.....	153
8.6.2	Temperature-dependent behavior of samples showing no hardening.....	154
8.6.2.1	Structures and temperature curves of polymers .....	154
8.6.2.2	Temperature-curves of dispersions and gels .....	159
8.6.3	Temperature-dependent behavior of samples showing hardening .....	160
8.6.4	Thermoanalysis (TA) .....	162

8.7	Time/temperature shift.....	163
8.7.1	Temperature shift factor according to the WLF method.....	163
8.8	The Cox/Merz relation .....	168
8.9	Combined rotational and oscillatory tests .....	169
8.9.1	Presetting rotation and oscillation in series.....	169
8.9.2	Superposition of rotation and oscillation .....	169
9	<b>Measuring systems</b> .....	171
9.1	Introduction.....	171
9.2	Concentric cylinder measuring systems (CC MS) .....	171
9.2.1	Cylinder systems in general .....	171
9.2.1.1	Geometry of cylinder systems showing a large gap.....	171
9.2.1.2	Operating methods .....	171
9.2.1.3	Calculations .....	172
9.2.2	Narrow-gap concentric standard cylinder measuring systems .....	173
9.2.2.1	Geometry.....	173
9.2.2.2	Calculations .....	174
9.2.2.3	Conversion between raw data and rheological parameters .....	176
9.2.2.4	Flow instabilities and secondary flow effects in a cylinder MS.....	176
9.2.2.5	Advantages and disadvantages of cylinder MS.....	177
9.2.3	Double-gap measuring systems (DG MS) .....	178
9.2.4	High-shear cylinder measuring systems (HS MS).....	178
9.3	Cone-and-plate measuring systems (CP MS) .....	179
9.3.1	Geometry.....	179
9.3.2	Calculations.....	179
9.3.3	Conversion between raw data and rheological parameters .....	181
9.3.4	Flow instabilities and secondary flow effects in a CP MS.....	181
9.3.5	Cone truncation .....	181
9.3.6	Maximum particle size and gap setting.....	182
9.3.7	Filling of the CP system.....	182
9.3.8	Advantages and disadvantages of CP MS.....	183
9.4	Parallel-plate measuring systems (PP MS).....	184
9.4.1	Geometry.....	184
9.4.2	Calculations.....	185
9.4.3	Conversion between raw data and rheological parameters .....	186
9.4.4	Flow instabilities and secondary flow effects in a PP MS.....	186
9.4.5	Recommendations for gap setting .....	186
9.4.6	Automatic gap settings (AGS) and automatic gap control (AGC) using the normal force control (NFC) option.....	187
9.4.7	Determination of the temperature gradient in the sample.....	187
9.4.8	Advantages and disadvantages of PP MS .....	188
9.5	Mooney/Ewart measuring systems (ME MS) .....	189
9.6	Relative measuring systems .....	190
9.6.1	Measuring systems with sandblasted, profiled or serrated surfaces .....	190
9.6.2	Spindles in the form of disks, pins and balls.....	191
9.6.3	Krebs spindles .....	193
9.6.4	Paste spindles showing pins and vanes.....	194
9.6.5	Ball measuring systems.....	195
9.7	Measuring systems for torsion bars.....	195
9.7.1	Bars showing a rectangular cross section .....	196
9.7.2	Bars showing a circular cross section .....	197

10	<b>Instruments</b> .....	199
10.1	Introduction.....	199
10.2	Short overview: methods for testing viscosity and elasticity .....	199
10.2.1	Very simple determinations.....	199
10.2.2	Flow on a horizontal plane.....	200
10.2.3	Spreading or slump on a horizontal plane after lifting a container.....	203
10.2.4	Flow on an inclined plane.....	201
10.2.5	Flow on a vertical plane or over a tool.....	201
10.2.6	Flow in a channel, trough, bowl.....	202
10.2.7	Flow cups and other pressureless capillary viscometers.....	202
10.2.8	Devices showing rising, sinking, falling, rolling elements.....	203
10.2.9	Penetrometers, consistometers, texture analyzers .....	204
10.2.10	Pressurized capillary devices.....	206
10.2.11	Simple rotational viscometer tests .....	206
10.2.12	Devices with vibrating or oscillating elements .....	208
10.2.13	Rotational and oscillatory curemeters (for rubber testing).....	208
10.2.14	Tension testers .....	209
10.2.15	Compression testers .....	210
10.2.16	Linear shear testers .....	210
10.2.17	Flexure or bending testers .....	210
10.2.18	Torsion testers.....	211
10.3	Flow cups .....	211
10.3.1	The ISO cup .....	212
10.3.1.1	Capillary length.....	213
10.3.1.2	Calculations .....	213
10.3.1.3	Flow instabilities, secondary flow effects, turbulent flow conditions in flow cups .....	215
10.3.2	Other types of flow cups.....	216
10.4	Capillary viscometers.....	216
10.4.1	Glass capillary viscometers .....	216
10.4.1.1	Calculations .....	218
10.4.1.2	Determination of the molar mass of polymers from diluted polymer solutions	219
10.4.1.3	Determination of the Viscosity Index VI of petrochemicals .....	224
10.4.2	Pressurized capillary viscometers .....	225
10.4.2.1	MFR and MVR testers driven by a weight ("low-pressure capillary viscometers").....	225
10.4.2.2	High-pressure capillary viscometers (HP CV), driven by an electric drive, for testing highly viscous and paste-like materials .....	229
10.4.2.3	High-pressure capillary viscometers (HP CV), driven by gas pressure, for testing liquids .....	231
10.5	Falling-ball viscometers .....	233
10.6	Rotational and oscillatory rheometers .....	234
10.6.1	Rheometer set-ups .....	235
10.6.2	Control loops .....	236
10.6.3	Devices to measure torques.....	239
10.6.4	Devices to measure deflection angles and rotational speeds .....	239
10.6.5	Bearings .....	240
10.6.6	Temperature control systems .....	242
11	<b>Guideline for rheological tests</b> .....	245
11.1	Selection for the measuring system.....	245

11.2	Rotational tests .....	245
11.2.1	Flow and viscosity curves .....	245
11.2.2	Time-dependent flow behavior (rotation).....	246
11.2.3	Step tests (rotation): structure breakdown and recovery (“thixotropy”).....	246
11.2.4	Temperature-dependent flow behavior (rotation).....	246
11.3	Oscillatory tests .....	247
11.3.1	Amplitude sweeps.....	247
11.3.2	Frequency sweeps .....	247
11.3.3	Time-dependent viscoelastic behavior (oscillation).....	248
11.3.4	Step tests (oscillation): structure breakdown and recovery (“thixotropy”).....	248
11.3.5	Temperature-dependent viscoelastic behavior (oscillation).....	249
11.4	Selection of the test type .....	249
11.4.1	Behavior of the rest.....	249
11.4.2	Flow behavior.....	251
11.4.3	Structural recovery (“thixotropic behavior”, e.g. of coatings).....	251
12	<b>Rheologists and the historical development of rheology</b> .....	252
12.1	Developments until the 19 <sup>th</sup> Century.....	252
12.2	Developments between 1800 and 1900 .....	254
12.3	Developments between 1900 and 1949.....	258
12.4	Developments between 1950 and 1979.....	263
12.5	Developments between 1980 and 2004.....	265
13	<b>Appendix</b> .....	267
13.1	Symbols, signs and abbreviations used .....	267
13.2	Greek alphabet.....	273
13.3	Conversion table for units .....	274
14	<b>References</b> .....	277
14.1	Publications and books .....	277
14.2	ISO standards (International Standards Organisation).....	283
14.3	ASTM International standards (American Society for Testing and Materials).....	284
14.4	DIN standards (Deutsche Industrie Norm, German Industry Standards).....	288
15	<b>Index</b> .....	290

## 15 Index

### A

abbreviations 267, 269, 271  
absolute measuring systems 190  
acetone 25  
acoustic absorption properties 87  
acoustic wave viscometer 208  
activation energy 70  
Adams consistometer 200  
adhesive dispersions 20, 22  
adhesives 76, 152  
AFNOR cups 216  
agglomerates 40  
aging 20  
air bearing 241  
air bubbles 18, 178  
air viscosity 25  
amorphous polymers 154  
amplitude sweeps 124  
amplitude sweeps (guideline) 247  
amylopectine 158  
amylose 157  
angle units 275  
angular frequency 131  
anti-thixotropy 61  
apparent viscosity 34, 41  
apparent yield point 45  
approximation functions ( $\eta/T$ ) 70  
approximation functions (flow curves) 53  
Arrhenius relation 70  
asphalt 144  
ASTM viscosity classification (lubricants) 218  
automatic gap control (AGC) 182, 187, 196  
automatic gap setting (AGS) 104, 182, 187  
automotive adhesive 119, 130  
automotive bumpers 87  
automotive coatings 22  
Avogadro's number 263

### B

ball-shaped spindles 193  
ball bearing 240  
ball measuring systems 195  
bamboo 88  
bars (specimens) 195, 197  
bearings 240  
behavior at rest (guideline) 249  
bending beam rheometer 210

bending testers 210  
bentonite 119, 125  
Bingham build-up 67  
Bingham model 49  
Bingham model function 55  
biological materials 87  
biological tissues 127, 138  
bitumen 25, 27, 76, 125, 144, 159  
bitumen number (pen) 205  
blade coating 20, 21, 22  
blood 20, 25, 87  
blood plasma 27  
Bloom gelometer 206  
bonds 48  
Borderline pumping temperature 207  
Bostwick consistometer 202  
bottle filling machine 23  
bouncing putty 17  
Brookfield spindles 192  
Brookfield viscosity 192  
brushing 22  
BS/IP U-Tubes 218  
BS cups 216  
Bubble viscometer 203  
Burgers model 93  
butter 20, 76

### C

Cannon-Fenske capillary viscometer 218  
capillary extruders 229  
capillary flow 20, 22, 49  
capillary viscometers 216  
Carreau/Gahleitner model function 54  
car tires 87, 138  
cartridge tests 206  
Casagrande apparatus 202  
casting slips 61  
CC measuring systems 171, 173, 175, 177, 179  
centigrades 153  
centipoise 25  
centistokes 26  
ceramic masses 45  
ceramic pastes 20  
ceramics 76  
ceramic suspensions 20, 41  
ceramic tile adhesives 195  
cheese 20, 138, 188, 191  
chemical network 139

chewing 20  
 chewing gum 158  
 chocolate melts 20, 31, 45, 57, 126  
 circumferential velocity 173  
 coating layer thickness 151, 161  
 coating process 20, 22, 51, 170  
 coatings 61, 65, 68, 69, 125, 148, 150, 161, 184, 193  
 coaxial cylinder measuring systems 171  
 coffee cream 25  
 coffee grounds 50  
 cohesive forces 75  
 cold cranking simulator 207  
 cold forging 49  
 Cole/Cole plot 134  
 colloid particle's size 24  
 combined rotation & oscillation 169  
 complex notation of  $G^*$  and  $\eta^*$  121  
 complex shear modulus 115, 118  
 complex viscosity 116, 120, 133  
 compliance 97  
 compression force 187, 196  
 compression testers 210  
 concentric cylinder measuring systems 171, 173, 175, 177, 179  
 conductor pastes 45  
 cone-and-plate measuring systems 179, 181, 183  
 cone penetration test 204  
 cone truncation 181  
 conicylinder 189  
 consistency 141  
 consistency at rest 139, 140  
 consistometers 204  
 construction materials 195  
 continuous relaxation time spectrum 111  
 continuous retardation time spectrum 101  
 controlled gap setting 187  
 controlled shear rate (CSR) 29, 123, 237  
 controlled shear strain 123  
 controlled shear stress (CSS) 30, 123, 236  
 control loops 236  
 convection heating 242  
 conversion table for units 274  
 cooling rate 153, 242  
 cork 77  
 cosmetic emulsions 160  
 cosmetics 44, 76, 190  
 Couette method 172, 234  
 coupe NFT 216  
 Cox/Merz relation 168  
 CP measuring systems 179, 181, 183  
 crashboxes 87  
 creaming 44  
 creams 44, 45, 61, 76  
 creep 20  
 creep compliance 97  
 creep recovery compliance 97

creep tests 90  
 critical concentration (polymers) 37  
 critical molar mass (polymers) 38  
 critical Re number 177, 215  
 cross-linked materials 92, 105  
 cross-linked polymers 90, 103, 106, 125, 126, 138, 157  
 cross-linking process 150, 160  
 crossover point (frequency sweep) 137

## E

e-function (viscosity curve fitting) 55  
 E-modulus 77  
 edge creep 68, 69, 151, 161  
 edge failure 183, 188  
 efflux viscosity cups 211  
 Einstein's viscosity equation 258  
 elastic-turbulent melt flow 230  
 elastic behavior 74, 75, 79, 118, 121, 229  
 elastic deformation range 46  
 elasticity law 79  
 elasticity modulus 163  
 elastomers 76, 114, 138, 158, 188, 191, 196  
 elastometer 205  
 elastoplastic 49  
 electric heating 242  
 Ellis model function 55  
 elongation 77

emulsion paints 20, 45, 83, 170  
 emulsions 20, 44, 61, 125, 126, 160  
 Engler cup 216  
 entanglements 35, 43  
 epoxy resins 68, 70, 151, 158, 161  
 equilibrium shear compliance 98  
 equilibrium shear modulus 108  
 equilibrium stress 105  
 eraser gum 76, 104, 138  
 esterification 158  
 Euclidean body 261, 263  
 extensional viscosity 258  
 extension rate (Henky) 260  
 extensometer 209  
 extrusion 20, 82  
 extrusion plastometers 225  
 Eyring/Prandtl/Ree model function 54

## F

Fahrenheit (conversion) 276  
 falling-ball viscometers 203, 233  
 falling-rod viscometers 203  
 fat 159, 190  
 fiber-reinforced resins 76  
 fibers (in pastes) 195  
 Fikentscher K-value 223  
 fitting functions ( $\eta/T$ ) 70  
 fitting functions (flow curves) 53  
 flag impeller spindles 194  
 flexibility 141  
 flexure testers 210  
 flotation 28, 140  
 flow (channel, trough) 202  
 flow (horizontal plane) 200  
 flow (inclined plane) 201  
 flow (vertical plane) 201  
 flow activation energy 70  
 flow behavior 19  
 flow behavior, idealviscous 26  
 flow behavior, Newtonian 26  
 flow behavior, pressure-dependent 72, 73  
 flow behavior, shear-thickening 40  
 flow behavior, shear-thinning 33  
 flow behavior, temperature-dependent 69, 71  
 flow behavior, time-dependent 58, 59, 61, 63, 65, 67  
 flow behavior, viscoelastic 80  
 flow cups 211, 213, 215  
 flow curves 27, 51  
 flow curves, fitting functions 53  
 flow instabilities 42, 176, 181, 186  
 flow instabilities (flow cups) 215  
 flow point 129  
 flow point (guideline) 247  
 flow pressure 206

flow range 38  
 flow rate ratio, FRR (MVR) 226  
 flow resistance 26  
 flow reverse 29  
 flow stress 129  
 fluidity 26  
 fluids 24, 125  
 foams 61, 126  
 food 23, 76, 84, 125, 190, 194, 195  
 food gels 138  
 Ford cups 216  
 form-stability 125  
 free vibration devices 211  
 freeze-thaw-cycle tests 160  
 freezing point 69, 159  
 frequency-dependence (amplitude sweeps) 129  
 frequency-dependence (LVE range) 127  
 frequency/temperature shift 163  
 frequency sweeps 131, 133, 135, 137, 139, 141  
 frequency sweeps (guideline) 247  
 fruit juices 20, 25  
 fuels 20

## G

G-modulus 77  
 Gallenkamp torsion viscometer 207  
 gap setting 182, 186, 187  
 Gardner/Holdt bubble viscometer 203  
 gases (viscosity) 25  
 gasoline 25  
 gear oils 25  
 gelatine gels 138  
 gelation 150, 151  
 gelation point 70  
 gelation test (20 min buildup) 206  
 gelation testing (guideline) 249  
 gelation time test (rod lifting) 200  
 gelation time test (rotating rod) 207  
 gel character 48, 125  
 gelants 125  
 gel point 68, 69, 119, 150, 161  
 gels 45, 61, 76, 90, 103, 114, 126, 139, 141, 158, 159, 188, 191  
 gel stability 140  
 gel state 119, 151, 161  
 gel temperature 69, 161  
 gel testing (guideline) 248  
 gel time 68, 150  
 gel time test (hot plate) 200  
 generalized Kelvin/Voigt model 100  
 generalized Maxwell model 109, 135  
 glass 76, 136, 159  
 glass capillary viscometers 216  
 glass transition temperature 155, 157, 158

glassy-rubbery state 157  
 glassy range (frequency sweep) 136  
 glues 34  
 grease 59, 126  
 Greek alphabet 273  
 Greek characters 271  
 guideline (rheological tests) 245  
 gummi bears 76

## H

Hagen/Poiseuille relation 22  
 hand cream 18, 44  
 hardening process 67, 69, 150, 160  
 hardening testing (guideline) 249  
 hard rubbers 76  
 heating rate 153, 242  
 Heli-path system 192  
 Henky strain (extension rate) 260  
 Herschel/Bulkley model function 57  
 high-pressure capillary viscometers 229, 231  
 high-shear C&P viscometer 184  
 high-shear conditions 163  
 high-shear measuring systems 178  
 high-shear range 39  
 Hooke's law 78, 98, 108, 115, 125, 197  
 horizontal shift factor (WLF) 164  
 hotmelt adhesives 90, 152  
 hotmelts 25  
 HS measuring systems 178  
 HTHS viscosity 207, 232  
 hydrocolloids 125  
 hydrogen bridges 48  
 hydrostatic pressure 36, 213, 218  
 hysteresis area 65  
 Höppler (falling ball viscometers) 233

## I

icecreams 159  
 ICI C&P viscometer 184  
 idealelastic behavior 78, 91, 104, 115  
 idealplastic behavior 48  
 idealviscous flow behavior 26, 53, 92, 105, 116, 216, 218  
 imaginary part (complex viscosity) 121  
 impact 20  
 incremental encoders 240  
 induction heating 242  
 inelastic 49  
 infinite-shear viscosity 39, 54  
 inherent viscosity 220  
 injection moulding 20  
 instantaneous shear compliance 98

instantaneous shear modulus 108  
instruments 199  
interaction forces 40, 48, 139  
intrinsic viscosity 220, 233  
inverse mastercurve 167  
IOCCC recommendation 31, 57  
irreversible deformation behavior 119  
ISO 3219 standard 29, 173, 179  
ISO cup 212  
ISO cylinder measuring systems 173  
ISO viscosity classification (lubricants) 218

## J

jam 195  
jelly babies 20, 76, 138  
juices 20

## K

K-value (Fikentscher) 223  
Kasumeter 203  
Keesom forces 48  
Kelvin/Voigt model 85, 93, 95, 99  
Kelvin/Voigt solid 86  
Kesternich method 206  
ketchups 45, 60, 61  
kinematic viscosity 26  
Krebs spindles 193  
Krebs units (KU) 193

## L

lacquers 20  
laminar flow 19, 23, 215  
laminates 196  
LAOS 127  
Laray viscometer (falling rod) 203  
large amplitude oscillatory strain 127  
large particles 195  
latex dispersions 61  
lattice dislocation 49  
layer thickness 51, 65, 68, 69, 149, 151, 161  
Lehmann cup 216  
leveling 20, 51, 65, 68, 69, 149, 151, 161, 170  
light oils 25  
limiting viscosity number (LVN) 220, 233  
limit of the LVE range 98, 108  
linear-elastic behavior 125  
linear-elastic range 46, 77, 78  
linear-shear testers 210  
linear-viscous behavior 125

linear viscoelastic (LVE) range 125  
lipstick 45  
liquid bath (temperature control) 242  
liquid character 125  
liquid state 119  
Lissajous figures 264  
loam 50  
logarithmic viscosity number 220  
London forces 48  
long-term behavior 102, 112, 131, 163  
long-term stability (dispersions) 140  
long-term stability (guideline) 250  
loss angle 118  
loss factor 119, 121  
loss modulus 119  
lotions 20, 44, 76, 125  
low-pressure capillary viscometers 225  
low-shear conditions 163  
low-viscosity fluids 213  
low-viscosity liquids 114, 176, 178, 181, 184, 186  
LTHS viscosity 207  
LTLS viscosity 207  
lubricants 72  
lubricating grease 20  
lubrication (engine) 20  
LVE range (strain) 98, 108, 126  
LVE range (stress) 128

## M

macromolecules 35, 40, 92, 106, 133, 154  
margarine 45  
Mark-Houwink relation 221  
marmalade 195  
Marshall apparatus 210  
Marsh funnel 216  
master curve (WLF) 164  
Matthis fluidometer 202  
maximum particle size 182, 187  
Maxwellian behavior 139  
Maxwellian liquids 81, 133, 168  
Maxwell model 80, 93, 107, 109, 133  
mayonnaise 45

 power-law model function 53  
 PP measuring systems 184, 185, 187, 189  
 Prandtl/Reuss model function 49  
 pre-shear intervals 31, 59  
 prepregs 126  
 pressure-dependent flow behavior 72, 73  
 pressureless viscometers 212, 218  
 pressure shift factor ( $\eta/p$ ) 73  
 pressurized capillary viscometers 225  
 primary bonds 48, 157  
 printing inks 20, 61, 125, 130, 141, 203  
 printing pastes 45  
 profiled surfaces 188, 190  
 pseudoplastic Index (PPI) 35  
 puddings 76  
 pump pressure 22  
 putties 45
- ## R
- ramp function 31  
 rate of build-up 67  
 rate of deformation 21, 75, 96  
 ratio of the radii 174  
 Ravenfield viscometer 207  
 raw data (oscillatory tests) 122  
 raw data (rotational tests) 29, 30  
 reaction temperature 161  
 real part (complex viscosity) 121  
 recovery 65, 149  
 recovery compliance 98  
 reduced angular frequency 164  
 reduced viscosity 220  
 Redwood viscometer 216  
 reformation curve 96  
 regeneration 64, 148  
 regression models (flow curves) 53  
 reinforced laminates 196  
 relative measuring systems 50, 190, 191, 193  
 relative torque values 175, 190, 239  
 relative values 199  
 relative viscosity 220  
 relative viscosity values 190, 192, 193  
 relaxation 106  
 relaxation modulus 107  
 relaxation tests 103  
 relaxation time 109  
 relaxation time spectrum 109  
 representative shear rate 175  
 representative shear stress 174  
 representative shear viscosity 175  
 resins 68, 70, 76, 126, 138, 151, 158, 161, 186  
 resistance to flow 26  
 retardation 93  
 retardation time 99  
 retardation time spectrum 100  
 reversible deformation behavior 118  
 reversible elastic range 47  
 Reynolds number 23, 43, 177  
 Reynolds number (flow cups) 215  
 rheological additives 119  
 rheologists 252  
 rheology 16  
 rheology (panta rhei) 260  
 rheometer set-ups 235  
 rheometry 16  
 rheopectic behavior 146, 150  
 rigidity 75, 79, 97, 115, 125, 138, 163  
 ring-and-ball method (R&B) 204  
 road tar viscometer 216  
 rod-climbing effect 83, 178  
 rolling-ball test 204  
 rotational rheometers 234, 235, 237, 239, 241, 243  
 rotational speed, control 237  
 rotational speed, detection 239  
 rotational tests 29  
 rotational tests (first check) 245  
 rotational tests (guideline) 245  
 roughness (PP) 184  
 rubber-elastic plateau 136  
 rubber-elastic state 157  
 rubber balls 84  
 rubber buffers 86  
 rubbers 76, 77, 104, 125, 138, 158, 188, 191  
 rubbing 20
- ## S
- sagging 51, 65, 69, 149  
 sagging (stepped blade) 201  
 salad dressings 76, 125  
 sandblasted surfaces 188, 190  
 SAOS 127

- sauce alla bolognese 195  
sauces 194  
Saybolt Universal/S. Furol viscometer 216  
scorch time 209  
sealants 45, 50, 61, 76, 138  
Searle method 171  
secondary bonds 48  
secondary flow effects 42, 176, 181, 186, 190  
secondary flow effects (flow cups) 215  
sedimentation 20, 23, 28, 140  
selection (measuring system) 245  
selection (type of testing) 249, 251  
self-leveling 20, 125  
semisolid dispersions 195  
separation 41, 49, 61, 131, 140  
serrated surfaces 188, 190  
settling process 140  
Severs extrusion rheometer 229  
shampoos 34  
shear-heating 28, 59, 86, 179, 187, 230, 232  
shear-induced structural change 62, 150  
shear-thickening, time-dependent 42  
shear-thickening flow behavior 40, 53  
shear-thinning, time-dependent 34  
shear-thinning flow behavior 33, 53  
shear-thinning index 34  
shear conditions 19, 74, 115  
shear deformation 74  
shear gradient 21  
shear modulus 75  
shear modulus, complex 118  
shear rate 21, 75  
shear rate range (capillary viscometer) 219  
shear rate range (flow cups) 214  
shear rate values 21  
shear strain 74  
shear stress 19  
shear stress amplitude 117  
shear stress relaxation curve 107  
shear viscosity 24  
shear viscosity, apparent 34  
shell cups 216  
shift factor ( $\eta/p$ ) 73  
shift factor ( $\eta/T$ ) 71  
shift factor (WLF) 163  
shock absorbers 27, 87  
short-term behavior 112, 131, 137, 163  
shrinkage 187, 196  
SHRP method 144  
silica 119, 125  
silicone 17, 18, 20, 25, 44, 82, 104, 105, 110, 125, 131, 154, 186, 188  
silicone oils 27  
silicone rubbers 84, 158  
sinusoidal strain function 116  
Sisko model function 55  
SI system of units 263  
skin creams 20  
slit die geometry 229, 232  
sludge 50  
slump test 200  
small amplitude oscillatory strain 127  
soap 50  
softening 69, 154, 159, 163  
softening point (SP) analyzer 204  
soft gap setting 187  
soft gel structures 76  
soft rubbers 127  
soil flow 49, 195  
sol/gel transition point 119, 150  
sol/gel transition temperature 161  
sol character 125  
solidification temperature 69, 159  
solid polymers 127, 196  
solids 75, 84, 92, 105, 114, 125, 126, 153, 188  
solid state 119  
solifluction 49  
sol state 119, 151, 161  
solvents 27  
solvent trap 178, 183, 189  
sound insulation 87  
specific viscosity 220  
spindles 191  
spinning process 83  
spray coatings 20, 76  
spreading test (tube efflux) 200  
spring 78  
spring model 78  
St. Venant model 48  
stability 125  
Stabinger viscometer 207  
standard geometry (cylinders) 174  
standard oils 27  
starch 125, 157, 158  
starch dispersions 41  
start effects 32  
Staudinger function 220  
Staudinger Index 220, 233  
steady-state behavior 94, 96, 107  
steady-state viscosity 32  
steel 17, 76, 78  
Steiger/Ory model function 54  
step strain test 103  
step test 62, 146  
stickiness 83, 119  
stirring process 20, 83  
stokes (unit) 26  
Stokes' law 23  
stone 76  
storage modulus 118  
strain 74  
strain amplitude 116, 124

strain rate 21, 75  
stress-free contact 187  
stress amplitude 124  
stress relaxation test 103  
stringy behavior 83, 119  
structural decomposition 60, 145  
structural regeneration 60, 145  
structural strength 140, 141  
subsidence 50  
superposition (rotation & oscillation) 169  
superposition principle (Boltzmann) 101, 110  
surface fracture 181, 183, 186, 188  
surface leveling 20  
suspensions 23, 43, 61, 126, 258  
symbols 267, 269, 271  
syneresis 141

## T

T-bar spindle 192  
tachogenerator 240  
tack behavior 83, 119  
tangent method (LVE range) 126  
tangent methods (yield point) 46  
tapered bearing simulator 207  
tapered plug viscometer 207  
Taylor number 43, 176  
Taylor vortices 177  
temperature (unit conversion) 276  
temperature-dependent behavior (guideline) 249  
temperature-dependent behavior 153, 155, 157, 159, 161  
temperature-dependent flow (guideline) 246  
temperature-dependent flow behavior 69, 71  
temperature-invariant mastercurve 164  
temperature calibration sensor 187, 195  
temperature control systems 242  
temperature equilibration 31, 59  
temperature gradient 187, 195  
temperature shift factor ( $\eta/T$ ) 71  
temperature shift factor (WLF) 164  
temporary network (entanglements) 134  
tensile modulus 77  
tensile strain 77  
tensile stress 77  
tension testers 209  
texture analysers 205  
thermal-stability time (polymers) 145, 154  
thermal effects 59  
thermal expansion 188, 196  
thermo-rheologically simple materials 70, 163  
thermoanalysis (TA) 162  
thermoforming 20  
thermogravimetry (TG) 162  
thermomechanical analysis (TMA) 162

thermosets 126, 138, 151, 153  
thixotropic area 66  
thixotropic materials 61  
thixotropy 145  
thixotropy (via Gallenkamp) 207  
thixotropy index 67  
thixotropy testing (guideline) 246, 248, 251  
time-dependent behavior 143, 145, 147, 149, 151  
time-dependent behavior (guideline) 248  
time-dependent flow (guideline) 246  
time-dependent flow behavior 58, 59, 61, 63, 65, 67  
time/temperature shift 163  
tires 87, 138  
toothpastes 20, 44, 45  
torque, control 236  
torque, detection 239  
Torque tester (grease) 207  
torsion-pendulum method 211  
torsional geometrical moment of inertia 197  
torsional section modulus 196  
torsion bars 195, 197  
torsion testers 211  
torsion tests 195  
transient behavior 147  
transient effects 59  
transient viscosity 32, 63  
transient viscosity peak 33  
truncated cone 181  
Tscheuschner model function 58  
TTS method 163  
tube flow 22, 49  
tuning-fork vibration method 208  
turbulent flow 42, 59, 176, 181, 183, 186, 188, 190, 193, 215  
turbulent flow (flow cups) 215  
turbulent flow (high-pressure capillary viscometer) 232  
turbulent flow (water) 43  
two-plates-model 19, 32, 44, 50, 74, 88, 114

## U

Ubbelohde capillary viscometers 217  
units, conversion table 274, 275  
UV radiation 152

## V

van-der-Waals forces 48  
vane spindles 194  
varnishes 125, 141  
vaseline 126  
vector diagram 120, 121  
velocity gradient 21, 173

velocity rate 32, 50  
 vertical shift factor 167  
 vibrating viscometers 208  
 vibration insulating mat 86  
 viscobalance 205  
 viscoelastic behavior 80, 92, 105, 117  
 viscoelastic flow behavior 80  
 viscoelastic liquids 81, 133  
 viscoelastic materials 184  
 viscoelastic solid 86  
 viscoplastic 49  
 viscosity 24  
 viscosity, apparent 34  
 viscosity, Bingham 56  
 viscosity, Brookfield 192  
 viscosity, complex 120  
 viscosity, dynamic 25, 121  
 viscosity, extensional 258  
 viscosity, imaginary part 121  
 viscosity, infinite-shear 39, 54  
 viscosity, inherent 220  
 viscosity, intrinsic 220  
 viscosity, kinematic 26  
 viscosity, pressure-dependent 72, 73  
 viscosity, real part 121  
 viscosity, reduced 220  
 viscosity, relative 220  
 viscosity, shear 24  
 viscosity, specific 220  
 viscosity, steady-state 32  
 viscosity, temperature-dependent 69, 71  
 viscosity, time-dependent 58  
 viscosity, transient 32, 63  
 viscosity, zero-shear 37, 54  
 viscosity, pressure coefficient 73  
 viscosity, pressure shift factor 73  
 viscosity, temperature shift factor 71  
 viscosity curves 27  
 viscosity curves, fitting functions 53  
 viscosity functions 51  
 viscosity index VI (petrochemicals) 224  
 viscosity minimum 68, 69, 151, 161  
 viscosity number (VN) 220  
 viscosity ratio (polymer solutions) 220  
 viscosity ratio (VR) 34  
 viscosity relative increment 220  
 viscosity standard oils 27  
 viscospatula 201  
 viscous behavior 119, 121  
 viscous shear-heating 28, 86, 179, 187, 230, 232  
 vitrification 151  
 Voigt model 85  
 volume-specific surface 44  
 volume concentration 41, 258  
 volume flow rate (MVR) 228

vortices 42, 176  
 vulcanization time 209

## W

wallpaper paste 26  
 wall slip 41, 45, 49, 61, 131, 178, 188, 190, 194, 195  
 water 18, 24, 25, 27, 43, 69, 72, 83, 105, 109, 159, 176, 177, 215  
 wax 50, 191  
 Weissenberg effect 83, 89, 178, 181, 186  
 Williamson model function 58  
 Windhab model function 57  
 WLF relation 164

## Y

yield point 44, 45, 51, 55, 128, 140  
 yield point (guideline) 246, 247, 249  
 yield point (via falling rod) 204  
 yield point (via gelation test) 206  
 yield point (via inclined channel) 202  
 yield point (via inclined plane) 201  
 yield point (via Kasumeter) 203  
 yield point (via mini-rotary) 207  
 yield point (via penetration) 204  
 yield point (via slump) 201  
 yield point (via vane spindle) 194  
 yield point, Bingham 55  
 yield stress 44, 128  
 yield value 44  
 yield zone 47, 129  
 yogurt 20, 45, 61, 194  
 Young's modulus 77

## Z

Zahn cups 216  
 zero-normal stress coefficient 89  
 zero-shear viscosity 25, 37, 52, 54, 71, 73, 96, 133, 168  
 zero-shear viscosity (guideline) 246, 250t
