SOIL MANAGEMENT PROBLEMS AND SOLUTIONS

Contents

Foreword		viii
Preface		ix
List of tables		x
List of illustrations		xii
Acknowledgements		xvi
Chapter 1	Introduction	1
	Introduction	1
	1.1 Soil survey, soil classification and land evaluation	4
	Summary	9
Chapter 2	Soil erosion and conservation	10
	Introduction	10
	2.1 Soil erosion	10
	2.2 Methods of quantifying soil losses	16
	2.3 Factors controlling soil erosion risk	18
	2.4 Soil conservation	20
	Summary	26
Chapter 3	Desertification, salinization and amelioration of arid soils	27
	Introduction	27
	3.1 The desertification concept	27
	3.2 Causes of desertification	29
	3.3 The problem of salinization	37
	3.4 Desert reclamation	39
	3.5 Desertification and desert reclamation in China: a case study	40
	3.6 Reclamation of saline soils	45
	Summary	47
Chapter 4	Soil water management	48
	Introduction	48
	4.1 Soil porosity and water content	48
	4.2 Effects of soil water content on plant growth	56
	4.3 Irrigation of crops	60
	4.4 Field drainage	65
	Summary	73
Chapter 5	Chemical and microbiological pollution of soil and water	75
	Introduction	75
	5.1 What is pollution?	75

	5.2	Organic farm wastes	76
	5.3	Sewage sludge and heavy metal pollution	83
	5.4	Inorganic fertilizers	86
	5.5	Pesticides and industrial organic chemicals	97
	5.6	Gaseous pollution of soils	102
	5.7	Microbial contamination	103
		Summary	105
Chapter 6		Soil acidification	107
		Introduction	107
	6.1	Causes of soil acidity	107
	6.2	Definition and measurement of pH	111
	6.3	Effects of soil acidity	112
	6.4	Soil treatment for acidity	119
	6.5	Treatments to acidify non-acid soils	122
		Summary	122
Chapter 7		Modification of soil structure	123
		Introduction	123
	7.1	The nature of soil structure	123
	7.2	Zero, minimum and conservation tillage	128
	7.3	Conventional tillage	132
	7.4	Plaggen soils	135
	7.5	Marling	136
	7.6	Soil compaction	136
	7.7	Soil reclamation and restoration	140
		Summary	146
Chapter 8		Soil organic matter and its conservation	147
		Introduction	147
	8.1	The nature of soil organic matter	147
	8.2	The importance of soil organic matter	152
	8.3	Factors determining soil organic matter content	153
	8.4	Rates of organic matter decomposition	155
	8.5	Organic manures	157
	8.6	Crop residue disposal	159
	8.7	Peat soils and their management	162
		Summary	164
Chapter 9		Soils and climatic change	165
		Introduction	165
	9.1	The nature of climatic change	166
	9.2	Modelling future climate	171

Preface	9.3 Effects of global warming on soils and management to decrease emissions of 'greenhouse' gases	173
	9.4 Effects of future climatic change on soil hydrology and sea level	182
	9.5 Climatic change during the Quaternary period and its causes	183
	9.6 The role of 'greenhouse' gases in Quaternary climatic change	191
	9.7 The relative importance of soil and vegetation management in global warming	194
	Summary	195
Chapter 10	Prospects for the twenty-first century	197
	Introduction	197
	10.1 Meeting the challenges posed by future climatic change	197
	10.2 Urbanization, industry and soils	199
	10.3 Soils and human health	201
	10.4 Soils and habitat creation	203
	10.5 Soil quality	205
	Summary	206
Bibliography		207
Index		259
