Contents

Preface to the First Edition	xiii
Preface to the Second Edition	xv
1. Interferometry: Its Development	1
1.1 The Wave Theory of Light	1
1.2 The Michelson–Morley Experiment	2
1.3 Measurement of the Metre	2
1.4 Optical Testing	3
1.5 Coherence	3
1.6 Interference Spectroscopy	3
1.7 The Laser	4
1.8 Electronic Techniques	4
1.9 Heterodyne Techniques	5
1.10 Fiber Interferometers	5
1.11 Nonlinear Interferometers	5
1.12 Stellar Interferometry	6
1.13 Space-Time and Gravitation	7
1.14 Quantum Effects	7
1.15 Future Directions	7
2. Two-Beam Interference	9
2.1 Complex Representation of Light Waves	10
2.2 Interference of Two Monochromatic Waves	11
2.3 Wavefront Division	12
2.4 Amplitude Division	14
2.4.1 Interference in a Plane-Parallel Plate	14
2.4.2 Fizeau Fringes	16
2.4.3 Interference in a Thin Film	17
2.5 Localization of Fringes	18
2.5.1 Nonlocalized Fringes	18
2.5.2 Localized Fringes	19
2.5.3 Fringes in a Plane-Parallel Plate	21
2.5.4 Fringes in a Wedged Thin Film	21

2.6	Two-Beam Interferometers	23
2.7	The Michelson Interferometer	24
	2.7.1 Nonlocalized Fringes	25
	2.7.2 Fringes of Equal Inclination	26
	2.7.3 Fringes of Equal Thickness	26
2.8	The Mach–Zehnder Interferometer	26
2.9	The Sagnac Interferometer	28
2.10	Interference with White Light	29
2.11	Channeled Spectra	29
2.12	Achromatic Fringes	31
2.13	Standing Waves	33
2.14	Interferential Color Photography	33
3.	Coherence	35
3.1	Quasi-Monochromatic Light	35
3.2	Waves and Wave Groups	36
3.3	Phase Velocity and Group Velocity	37
3.4	The Mutual Coherence Function	39
3.5	Spatial Coherence	43
3.6	Temporal Coherence	47
3.7	Coherence Time and Coherence Length	48
3.8	Coherence in the Space-Frequency Domain	49
3.9	Nonclassical Light	51
3.10	Effects in Two-Beam Interferometers	51
3.11	Source-Size Effects	55
3.12	Spectral Bandwidth Effects	56
3.13	Spectral Changes Due to Coherence	56
3.14	Polarization Effects	57
4.	Multiple-Beam Interference	59
4.1	Fringes in a Plane-Parallel Plate	59
4.2	Fringes by Reflection	63
4.3	Fringes of Equal Thickness	64
4.4	Fringes of Equal Chromatic Order	66
4.5	Fringes of Superposition	68
4.6	Three-Beam Fringes	73
4.7	Double-Passed Fringes	76
5.	Lasers	79
5.1	Lasers for Interferometry	79
5.2	Laser Modes	80
	5.2.1 Modes of a Confocal Resonator	81
	5.2.2 Longitudinal Modes	82
	5.2.3 Single-Frequency Operation	83

5.3	Comparison of Laser Frequencies	84
5.4	Frequency Stabilization	86
5.4.1	Stabilization with a Reference Etalon	86
5.4.2	Polarization-Stabilized Laser	86
5.4.3	Stabilized Transverse Zeeman Laser	86
5.4.4	Stabilization on the Lamb Dip	88
5.4.5	Stabilization by Saturated Absorption	88
5.4.6	Stabilization by Saturated Fluorescence	90
5.4.7	Diode Lasers	90
5.5	Laser Beams	91
6.	Electronic Phase Measurements	93
6.1	Photoelectric Settings	93
6.2	Fringe Counting	93
6.3	Heterodyne Interferometry	95
6.4	Phase-Locked Interferometry	96
6.5	Computer-Aided Fringe Analysis	97
6.5.1	Fourier-Transform Techniques	97
6.6	Phase-Shifting Interferometry	98
6.6.1	Error-Correcting Algorithms	101
6.7	Techniques of Phase Shifting	102
6.7.1	Frequency Shifting	102
6.7.2	Polarization Techniques	103
6.7.3	Simultaneous Measurements	103
6.8	Sinusoidal Phase Modulation	104
7.	Measurements of Length	105
7.1	Line Standards	105
7.2	End Standards	105
7.3	The Integral Interference Order	106
7.4	Exact Fractions	107
7.5	The Refractive Index of Air	107
7.6	The International Prototype Metre	109
7.7	The ^{86}Kr Standard	111
7.8	Frequency Measurements	111
7.9	The Definition of the Metre	112
7.10	Length Measurements with Lasers	113
7.10.1	Two-Wavelength Interferometry	113
7.10.2	Wavelength-Scanning Interferometry	114
7.10.3	Sinusoidal Wavelength Scanning	115
7.11	Changes in Length	116
7.12	Displacements	116
7.12.1	Vibrations	118
7.13	Dynamic Angle Measurements	118

8.	Optical Testing	119
8.1	The Fizeau Interferometer	119
8.2	The Twyman–Green Interferometer	121
8.3	Unequal-Path Interferometers	122
8.4	Phase Unwrapping	122
8.5	Analysis of Wavefront Aberrations	123
	8.5.1 Zernike Polynomials	124
	8.5.2 Wavefront Fitting	124
8.6	Shearing Interferometers	124
	8.6.1 Lateral Shear	125
	8.6.2 Interpretation of Interferograms	125
	8.6.3 Rotational and Radial Shearing	127
8.7	Grating Interferometers	129
8.8	The Scatter-Plate Interferometer	131
8.9	The Point-Diffraction Interferometer	132
8.10	Computerized Test Methods	133
	8.10.1 Absolute Tests for Flatness	134
	8.10.2 Small-Scale Irregularities	134
	8.10.3 Sources of Error	135
	8.10.4 Subaperture Testing	135
8.11	Aspheric Surfaces	136
	8.11.1 Computer-Generated Holograms	136
8.12	Rough Surfaces	138
8.13	The Optical Transfer Function	139
9.	Interference Microscopy	143
9.1	The Mirau Interferometer	143
9.2	Common Path Interference Microscopes	143
9.3	Polarization Interferometers	144
	9.3.1 Lateral Shear: Plane Wavefronts	144
	9.3.2 Lateral Shear: Spherical Wavefronts	146
	9.3.3 Radial Shear	147
9.4	The Nomarski Interferometer	147
9.5	Electronic Phase Measurements	148
	9.5.1 Phase-Shifting Techniques	149
9.6	Phase Ambiguities	151
9.7	White-Light Interferometry	151
	9.7.1 Phase Shifting	153
	9.7.2 Achromatic Phase Shifting	153
	9.7.3 Spectrally Resolved Interferometry	155
	9.7.4 Sources of Errors	156
10.	Interference Spectroscopy	157
10.1	Etendue of an Interferometer	157

10.2	The Fabry–Perot Interferometer	158
10.3	The Scanning FPI	159
10.4	The Spherical-Mirror FPI	161
10.5	The Multiple FPI	162
10.6	The Multiple-Pass FPI	163
10.7	Birefringent Filters	163
10.8	Wavelength Meters	165
	10.8.1 Dynamic Wavelength Meters	165
	10.8.2 Static Wavelength Meters	167
10.9	Heterodyne Techniques	169
10.10	Measurement of Laser Line Widths	169
10.11	Laser Frequency Standards	170
11.	Fourier-Transform Spectroscopy	173
11.1	The Etendue and Multiplex Advantages	173
11.2	Theory	175
11.3	Resolution and Apodization	178
11.4	Sampling	179
11.5	Effect of Source and Detector Size	180
11.6	Field Widening	181
11.7	Phase Correction	181
11.8	Noise	181
11.9	Prefiltering	182
11.10	Interferometers for FTS	182
11.11	Computation of the Spectrum	184
11.12	Applications	184
12.	Interferometric Sensors	189
12.1	Rotation Sensors	189
	12.1.1 Ring Lasers	190
	12.1.2 Ring Interferometers	191
12.2	Fiber Interferometers	191
	12.2.1 Rotation Sensors	191
	12.2.2 Sensors for Physical Quantities	193
	12.2.3 Multiplexed Fiber-Optic Sensors	197
12.3	Laser-Feedback Interferometers	198
	12.3.1 Diode-Laser Interferometers	200
12.4	Doppler Interferometry	201
	12.4.1 Laser-Doppler Velocimetry	201
	12.4.2 Surface Velocities	202
12.5	Vibration Measurements	204
12.6	Interferometric Magnetometers	206
12.7	Adaptive Optics	207

13.	Nonlinear Interferometers	209
13.1	Second-Harmonic Interferometry	209
	13.1.1 Critical Phase-Matching	212
13.2	Phase-Conjugate Interferometers	213
13.3	Phase-Conjugating Mirrors	213
13.4	Interferometers with Active Elements	216
13.5	Photorefractive Oscillators	217
13.6	Measurement of Third-Order Susceptibility	217
	13.6.1 Optical Fibers	219
13.7	Optical Switches	219
14.	Stellar Interferometry	221
14.1	Michelson's Stellar Interferometer	221
14.2	The Intensity Interferometer	223
14.3	Heterodyne Stellar Interferometry	227
	14.3.1 Large Heterodyne Interferometer	229
14.4	Long-Baseline Stellar Interferometers	230
14.5	Stellar Speckle Interferometry	232
14.6	Speckle Holography	234
14.7	The Hyper-Telescope	235
14.8	Astrometry	235
14.9	Nulling Interferometers	236
14.10	Telescope Arrays	236
15.	Space-Time and Gravitation	239
15.1	The Michelson–Morley Experiment	239
15.2	Gravitational Waves	241
15.3	Gravitational Wave Detectors	242
15.4	LIGO	245
15.5	The Standard Quantum Limit	246
15.6	Squeezed States of Light	248
15.7	Interferometry Below the SQL	251
16.	Single-Photon Interference	253
16.1	Interference at the “Single-Photon” Level	253
16.2	Interference—The Quantum Picture	254
16.3	Sources of Nonclassical Light	254
	16.3.1 Parametric Down-Conversion	254
16.4	The Beamsplitter	256
16.5	Interference with Single-Photon States	256
16.6	The Geometric Phase	257
	16.6.1 Observations at the Single-Photon Level	258
	16.6.2 Observations with Single-Photon States	259

16.7	Interference with Independent Sources	260
16.7.1	Observations in the Time Domain	262
16.8	Superposition States	264
17.	Fourth-Order Interference	267
17.1	Nonclassical Fourth-Order Interference	267
17.2	Interference in Separated Interferometers	271
17.3	The Geometric Phase	274
18.	Two-Photon Interferometry	277
18.1	Tests of Bell's Inequality	277
18.1.1	Tests with Unbalanced Interferometers	279
18.1.2	Tests with Perfect Correlations	280
18.2	Quantum Cryptography	281
18.3	Beams from Two Down-Converters	282
18.4	The Quantum Eraser	284
18.5	Single-Photon Tunneling	285
18.5.1	Dispersion Cancellation	286
18.5.2	Measurements of Tunneling Time	287
18.6	Conclusions	288
A.	Two-Dimensional Linear Systems	289
A.1	The Fourier Transform	289
A.2	Convolution and Correlation	290
A.3	The Dirac Delta Function	291
A.4	Random Functions	291
B.	The Fresnel–Kirchhoff Integral	293
C.	Reflection and Transmission	295
C.1	The Fresnel Formulas	295
C.2	The Stokes Relations	296
D.	The Jones Calculus	299
E.	The Pancharatnam Phase	301
E.1	The Poincaré Sphere	301
E.2	The Pancharatnam Phase	301
F.	Holography	303
F.1	The Off-Axis Hologram	303
F.2	Computer-Generated Holograms	305

G. Speckle	307
G.1 Speckle Statistics	307
G.2 Young's Fringes	308
Bibliography	309
References	311
Index	343
